SMART HOMEOWNERS CHOOSE GEOTHERMAL

In today's economy, wise purchases are more important than ever. **With the skyrocketing price of fossil fuels**, homeowners around the world have found that WaterFurnace is a **smart choice**. WaterFurnace geothermal comfort systems operate at a **fraction of the cost of ordinary systems**, saving you money every month. That's because WaterFurnace geothermal systems tap into the **clean, renewable energy** in your own backyard to provide **savings up to 70% on heating, cooling and hot water**. For more information and an analysis of savings potential, contact your local WaterFurnace dealer. **It's money in the bank.**

Michigan Country Lines, USPS-591-710, is published monthly, except August and December, with periodicals postage paid at Okemos, MI, and additional offices. It is the official publication of the Michigan Electric Cooperative Association, 2859 W. Jolly Rd., Okemos, MI 48864.

Subscriptions are authorized for members of Alger Delta, Cherryland, Cloverland, Great Lakes, HomeWorks Tri-County, Midwest Energy, Ontonagon, Presque Isle, and Thumb electric cooperatives by their boards of directors. Subscriptions are \$6 per year.

Postmaster: send address changes to Country Lines, 2859 W. Jolly Rd., Okemos, MI 48864.

Letters to the editor should be sent to the same address. Phone 517-351-6322. Email: knudtson@countrylines.com.

Association officers are Brian Burns, PIE&G, chairman; Ken Swope, Midwest Energy, 1st vice chairman; Tony Anderson, Cherryland, 2nd vice chairman; Eric Baker, Wolverine Power, secretary-treasurer; and Steve Boeckman, Great Lakes Energy, past chairman. Michael Peters is president and CEO.

Unsolicited letters, photos and manuscripts are welcome. Country Lines, however, will not be responsible for their safe keeping or return.

The appearance of advertising does not constitute an endorsement of the products or services advertised.

Your Touchstone Energy® Cooperative 

How Do We Rank?

It's easy to say we're doing a good job, but how do we measure the service we provide to our members? One way to evaluate how well Great Lakes Energy provides excellent service at the lowest possible cost is by comparing us with other electric cooperatives across the country.

A private engineering firm familiar with electric cooperatives did just that. They created a performance benchmarking report using reliability and cost data from a five-year period (2005-2009) that was collected from 163 Midwest electric cooperatives—including Great Lakes Energy.

It serves as a report card to show how well each co-op is doing as an organization. The data was used to calculate numerical "grades" that, in our case, ranked us consistently above average in 2009. For example, major improvements we've made that have reduced average outage minutes over the five-year period are reflected in the report.

This is just one yardstick for measuring our cost and reliability performance. There are other tools we use, too, including our annual member survey.

Just like prior annual surveys, the 2010 member survey results again show cost of service remains one of the service characteristics that is very important to you. Nearly 60 percent of our members rated cost of service

as either excellent or above average in 2010. In the three prior years (2007-2009), only an average of 48 percent gave it the same high marks. It was surprising to see this percentage increase given current economic conditions and the need for Great Lakes Energy and other utilities to raise rates in recent months.

The surprising statistic is likely related to the fact that more members are noticing improvements in their electric service reliability. Survey results show that 85 percent of members in 2010 rate reliability of service as excellent or above average compared to about 78 percent in 2007.

That's a direct result of the heavy investments we've made in recent years in right-of-way tree-clearing work; major upgrades to older, less dependable power lines, and new technologies that help us find and correct line problems more quickly and effectively.

Our goal is to join the top electric cooperatives in the United States with the best reliability records. It will take more time and more large investments to get there. Rate increases help us make those large investments so that we can continue to provide the best possible service to members.

We also have annual reliability goals. How did we do in 2010? See "SAIDI Says" on page 5 for the answer. Also, see story below for more on our 2010 member survey results.

Steve Boeckman
Great Lakes Energy
President/CEO

GLE Receives High Marks

The 2010 member survey shows that 97.6 percent of Great Lakes Energy (GLE) members are "satisfied" or "more than satisfied" with the overall level of service they receive.

Annually, the research services staff at Northwestern Michigan College in Traverse City performs a member satisfaction survey for Great Lakes Energy. Nearly 400 surveys were completed last fall by phone calls made to a random sampling of GLE members.

Great Lakes Energy uses the survey results to develop annual corporate goals. The results are also used to make service improvements as your cooperative strives to

provide reliable service at the best possible value for you, the member.

Members rated reliability, courteous employees and cost of service as the three most important service characteristics that GLE provides. The majority of respondents indicated they feel the co-op practices its mission to provide reliable service at the best possible value very effectively.

The survey data also helps us focus our improvements on areas that are most important to members. Thanks to the members who took time to participate in the survey. We appreciate your high marks and will continue looking out for you in the years to come.

If you have a comment about our service, please let us know. Write or email us at glenergy@glenergy.com.

We Surpassed 2010 Reliability Goal!

SAIDI Says

SAIDI (pronounced SAY-DEE) says Great Lakes Energy significantly surpassed its 2010 reliability goal, which was to not exceed 208 SAIDI minutes.

We finished 2010 well below that number with 165.99 average outage minutes.

Large annual investments in tree re-clearing near power lines, major line upgrade work and new technologies have allowed us to meet our annual reliability goal for the last five years. These major improvements have also enabled us to restore power more quickly when severe weather conditions cause massive, widespread damage to our distribution system.

SAIDI stands for System Average Interruption Duration Index. This system is a good indicator of a co-op's reliability because it reflects the average amount of time you can expect to be without power in a given year. Of course, in reality some members experience no outage time while others experience

more than the SAIDI number.

Our reliability goal is based on average outage minutes recorded during normal conditions. Typically the outages are due to weather, animals, equipment failures, vehicle accidents, and other causes. Extreme weather conditions, such as last fall's windstorm, are not included in determining our reliability goal. Extreme weather conditions in our service area are rare. In 2009, for example, there were no outages due to extreme storms.

Although pleased by last year's progress, this achievement is still only one small step toward our ultimate goal of one day reducing average outage minutes to 90 or less. This will take some time given our large 26-county service area and the financial resources required.

The total average outage minutes for 2010 have an impact on GLE's 2011 goal. We use data from the previous five years to establish the goal for the new year. Watch for *SAIDI Says* updates on how well we are meeting our 2011 goal in future issues of *Michigan Country Lines*.

Attend Our Free Energy Seminar

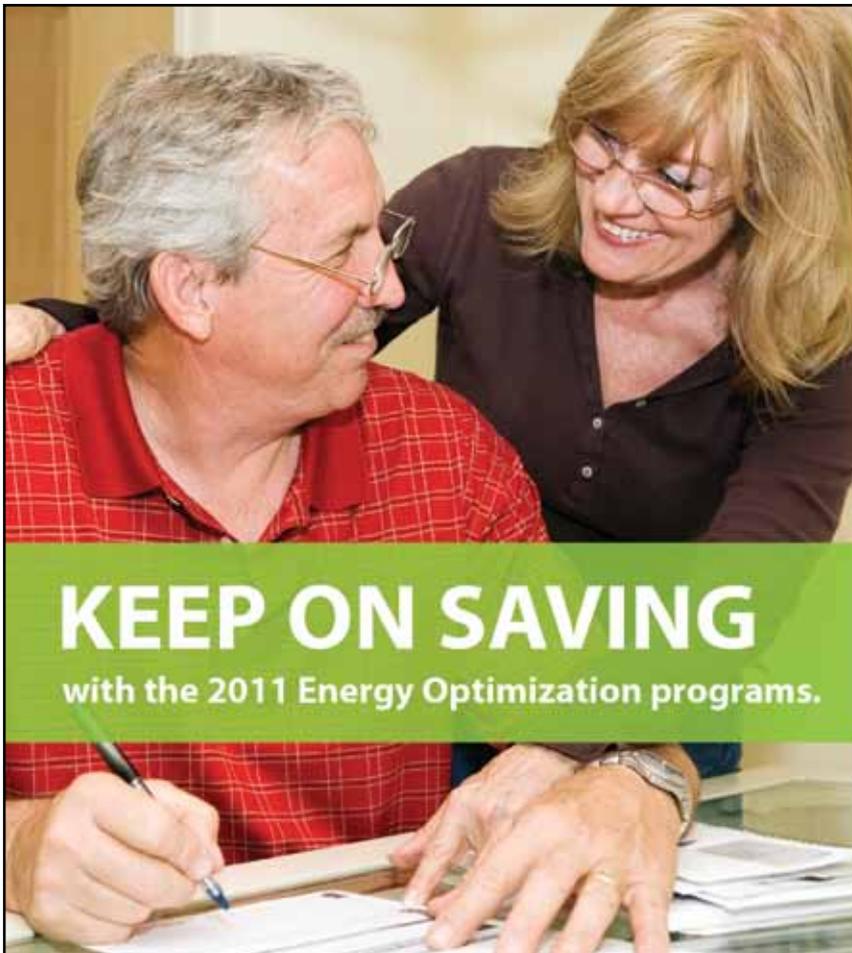

Attend a free energy seminar on Saturday, March 26, from 10 a.m. to noon at our Great Lakes Energy office in Newaygo.

Hear presentations on geothermal and air-source heat pumps, Marathon® electric water heaters, and more. Local heating and cooling companies and GLE staff members will answer your questions about electric heat and electric water heaters.

Receive the latest update on Energy Optimization (EO) programs that offer incentives to help you save energy. Learn about other GLE incentive programs, too.

Door prizes will be awarded and winners will receive energy-saving gifts.

Please register by calling 888-485-2537, ext. 8472, or email amcdonald@gleenergy.com. Space is limited.

KEEP ON SAVING
with the 2011 Energy Optimization programs.

Last year our Energy Optimization programs helped participating members save over 30 million kilowatt hours of electricity across the state of Michigan. That adds up to big energy bill savings—with even more chances for you to save this year! Watch for information about the 2011 Energy Optimization programs at michigan-energy.org or by calling 877-296-4319.

Efficiency Tax Credits Drop, But Don't Disappear

Benefit reverts to \$500 lifetime cap for upgrades.

Energy efficiency improvements are great for lowering electric bills. But sometimes the up-front cost can be a drawback.

Since 2005, Congress has enacted a series of tax breaks for consumers who take steps to make their homes more energy efficient. In December, the outgoing 111th Congress approved extending some popular efficiency tax credits through Dec. 31, 2011, but at greatly reduced levels.

"While we were hopeful that the tax credits would be higher than what was approved, we are encouraged that this valuable incentive for homeowner investment was retained," says Art Thayer, director of energy efficiency programs, Michigan Electric

Cooperative Association.

The federal "Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010" reduces the total lifetime credit that can be claimed on energy efficiency improvements made between 2006 and 2011 (excluding 2008, when no credit was available) from \$1,500 to \$500. It also lowers the percentage of efficiency upgrade costs consumers can recover, from 30 percent in 2009-2010 to 10 percent in 2011.

"Basically, energy efficiency tax credits revert to levels approved for 2006 and 2007, before the federal stimulus bill pumped up the program," Thayer explains. "There's also a lifetime cap of \$500 for any work that's done. But if you

haven't applied for an energy efficiency tax credit before, this extension gives you a chance to recoup some of the costs needed to make your home more efficient."

There are also maximum allowances for different upgrades. For installing more efficient windows, the credit is limited to \$200, with a \$300 cap for "any item of energy-efficient building property." Other restrictions include:

- ▶ **Furnaces** (\$150): Must have at least 95 percent (up from 90 percent) annual fuel utilization efficiency (AFUE). Oil furnaces and boilers were returned to the single furnace category at 95 percent AFUE.
- ▶ **Advanced main air circulating fan** (\$50): Must utilize less than 2 percent of a furnace's total energy consumption.
- ▶ **Central air conditioner** (\$300): Must have a seasonal energy efficiency ratio (SEER) of at least 16 and an energy efficiency rating (EER) of at least 13.
- ▶ **Air-source heat pump** (\$300): Must have at least a heating seasonal performance factor (HSPF) of 9, SEER of 16, and EER of 13.
- ▶ **Biomass fuel stove** (\$300): Requires a thermal efficiency rating of at least 75 percent.

produced in America during 2008, 2009 and 2010.

"While consumers cannot take these types of credits directly, these units may be promoted by manufacturers, or by state or utility efficiency programs, during the next two years," notes the Tax Incentives Assistance Project. The group tracks efficiency incentives at energytaxincentives.org.

Renewable Tax Credits Remain Active

Renewable energy tax credits created by the federal stimulus bill don't expire until Dec. 31, 2016. These cover 30 percent of materials and installation for residential solar panels, solar water heaters, small wind turbines, and geothermal heat pumps. Details are available at energystar.gov/taxcredits.

Claiming Tax Credits

Tax credits are beneficial because they directly reduce, dollar for dollar, any taxes you owe. Be sure to keep your receipts and your Manufacturer's Certification Statement (a signed statement from the manufacturer certifying that the product or component qualifies for the tax credit) for your records. Claim the credit by using IRS Form 5695.

Looking for Help?

Some electric co-ops and state government offices offer additional subsidies or rebates to consumers who make their homes more energy efficient. You can find this information at michigan-energy.org. For a list of federal, state and local energy efficiency rebates and tax credits, visit the "Database for State Incentives for Renewables & Efficiency," a project funded by the U.S. Department of Energy, at dsireusa.org.

Recycled Paper *Michigan Country Lines* is printed on recycled paper from FutureMark Paper, which taps the "urban forest" of waste paper thrown out in Chicago every day. Using recycled paper reduces the carbon emitted in paper production, the paper deposited in landfills, and water and air pollution. The energy to produce recycled paper is about one-half that required to make paper from pulp.

Scholarships Offered

Each year, the Michigan Electric Cooperative Association awards two \$1,000 scholarships to qualifying applicants. Individuals are chosen based on their scholastic achievement and extracurricular involvement during their high school career.

The applicant's parent or guardian must be a member or employee of a Michigan electric co-op, and the applicant must be planning to attend a Michigan college or school full-time.

Selection will be based on grade point average, character, leadership, academic achievement, extracurricular and community activities, and essay response.

Applications are available at countrylines.com; click on "Youth," email wolford@countrylines.com, or call 517-351-6322, ext. 205. Eligible applications must be postmarked by *April 4, 2011*.

Builders, Manufacturers Benefit, Too

The bill reinstates a credit of up to \$2,000 for builders (during 2010 and 2011) of energy-efficient residences that use no more than half the energy of a 2003 national model energy code home (the credit had expired in 2009). In addition, U.S.-based manufacturers of clothes washers, dishwashers and refrigerators will receive credits ranging from \$25-\$200 for efficient appliance models

Solar, Wind Affordable?

We are not being told what the costs are for solar and wind power run by individuals, companies, government-run facilities, etc. Solar and wind power generating plants are subsidized by municipal, state and federal government up to 80 percent of the capital cost of the plant. Those governments are way over their heads in debt right now and should not burden you and me with more debt.

After the solar and wind plants come on-line, the utility must pay for any excess which the owners cannot use themselves. The amount utilities must pay is at least three or four times what the power cost is from coal and nuclear. A utility must be able to meet peak loads, maintain transmission lines, and pay other fixed and variable overhead costs.

This is a direct subsidy for the owner of solar and wind generating facilities which everyone else pays for in their electric bill. The utility has to raise their rates to make it possible for others to enjoy lower rates, which will add a large amount to your electric bill.

—John Birkle, Stanwood

“The Music in Our Lives”

I am a faithful reader of your “Ramblings” column in *Michigan Country Lines*. This past one (“The Music In Our Lives,” Nov/Dec 2010) really stirred up something in my memory

and thanks to the internet, I have had some help!

You see, in early October I had the great fortune to tour 7 European countries, plus London. After crossing the English Channel, I saw the White Cliffs of Dover. This prompted something in my brain about that song, but could not recall the words. Since there were 50+1 on that tour (I am the #1 and say that because I was truly the Senior Citizen there), most of them were in their 60s or 70s and were no help to me. I got a blank look when I asked about the song, but it floated around in my head for several days and the words did not come. Thankfully, I have searched the internet and found the words, popular at WWII. That dates me, but there were some great songs...

And, as they say, “this is the rest of the story.” And yes, I also love Tony Bennett.

A devoted reader,

—Doris Dale

Thanks for sharing, Doris. That is a terrific song: “There’ll be Bluebirds Over the White Cliffs of Dover.”

—Mike Buda
mbuda@countrylines.com

I am an old guy (89 in March) who grew up in the Depression and pre-World War Two years, the 1930s, so I like that old music. I lived most of my life in Hazel Park, a suburb of Detroit, although I was born on a Montana homestead,

moving to Michigan when I was about four. The house I grew up in was built on cedar posts, no foundation, no bathroom...an outside toilet, to take a bath was in a wash tub in the kitchen, heating water on a stove.

Country Lines reader and music lover, Bob English

Throughout my life I had lots of hobbies and was not very good at any of them, but enjoyed them. As a boy, I built crystal sets and one-tube radios which I would listen to radio programs with earphones in bed, and I built model airplanes (rubber band motors, couldn’t afford small gas engines) and did photography...

Now, about music, I can’t carry a tune, never learned to dance (can’t keep time with the music) but I enjoy listening. While in high school (Big Band Era), my friend had a portable radio with a record player on top, played one 78 record at a time (33s or 45s were not yet out); he had a collection of about 20 or 30 records. You couldn’t listen to too many records as the phonograph motor would drain the batteries and then batteries were not rechargeable.

In 1973, I bought a cottage on the Black River, near Alverno, to stay in when we visited my daughter who lived in Cheboygan. Still own the cottage, that’s how I still get *Michigan Country Lines*. My

wife passed away in 2002, and I moved to Cheboygan to be near my daughter, a couple years later my son moved to Cheboygan.

My current hobbies are going to yard sales and auctions and buying phonograph records. I must have about 4,000 or 5,000, nothing valuable, but a lot of good tunes.

Of these, I have copied about 1,000 or more into my computer, which I listen to while playing solitary on my computer.

I enjoyed your article “The Music in Our Lives” very much, thank you for writing it.

—Bob English, Cheboygan
P.S. I did work...retired in 1972 after 30 years at Ford Motor.

Hats & Energy

I would like to respond to Carolyn Laarman’s “Idea for Keeping Warm & Saving Energy.”

While I think wearing a hat inside is an awesome idea to help stay warmer, this is not possible at my children’s school. They have a strict “no hat/hoodie” policy in force at North Ohio Elementary in Gaylord. The only exception to this rule is at lunchtime. The kids dress for recess BEFORE they go to lunch. They sit in a crowded cafeteria for 20 minutes, fully dressed, while trying to eat and then go out in the cold for recess. I asked about it last year when my kids were in kindergarten. I was told it is easier for teachers to assist kids in dressing in the classroom before lunch and then the teachers can take their lunches while the kids eat and their prep hour while the kids are on recess, and that there are not enough aides to help after the kids are done eating.

—Billie Zinke

Tell us about your favorite Michigan-made products!

Share a few paragraphs with us about your favorite Michigan-made product and we may write about it. Be sure to share why you like it and if you have a unique story to go with it, please send that, too. Email by March 10 to czuker@countrylines.com or send to: Country Lines, 2859 W. Jolly Road, Okemos, MI 48864.

Recycle CFLs at Great Lakes Energy

Recycle your used compact fluorescent lightbulbs (CFLs) at your local Great Lakes Energy service center.

Great Lakes Energy is looking out for you and has installed a COM-PAK Recycling Center in the lobbies of all eight service centers. Simply place your CFLs in the environmentally-secure containers. The co-op will ship them to Next Level for Recycling, Inc. (NLR), which disposes of waste products quickly and properly.

With more than 14 years of universal waste experience, NLR provides containers with InnerPak liners and vapor lock lids to guard against environmental breach.

CFLs help you save energy.

Why Do We Send You *Country Lines*?

We send *Michigan Country Lines* to you because it is the most economical and convenient way to share information with co-op members. It takes the place of many mailings we would otherwise make to get information to you about our services, director elections and member meetings, and about the staff and management decisions you should know about as an owner of the co-op. The magazine also carries legal notices that would otherwise have to be placed in local media at a substantial cost.

And, sending *Country Lines* to you helps the co-op fulfill one of its basic principles—to educate and communicate openly with members.

The board of directors authorizes the co-op to subscribe to *Country Lines* on behalf of its members at a cost ranging from \$3 to \$4 per year, paid as part of your electric bill. The current cost of the magazine is 35 cents per copy, less than a first-class stamp.

Michigan Country Lines is published for us, at cost, by the Michigan Electric Cooperative Association in Okemos. As always, we value your comments about your magazine.

Receive Rebate on New Water Heater

Rebates up to \$500 are available to Great Lakes Energy members who purchase and have installed a new Marathon® electric water heater from a GLE participating contractor at their account location.

Have a new Marathon unit at least 30 gallons in size installed in your home served by GLE and receive:

- ▶ \$250 if you are replacing an existing electric water heater,
- ▶ \$500 if you are replacing an existing non-electric water heater,
- ▶ \$500 if it will be installed in a new home that does not yet have a water heater.

We offer Marathon water heaters because of their superior quality and warranty. All units come with a lifetime tank warranty and are well-insulated.

You may also qualify to save more money with your Marathon by enrolling in our water heater load management program. It offers monthly billing credits to qualifying members that can save you up to \$90 per year.

Contact us at 888-485-2537, ext. 8957, for more information or visit our website, gtlakes.com, and go to the Load Management & Rebate Programs section under the "Your Home" tab.

Marathon is not regulated by the MPSC.

Visit Us at the Home Shows

Mark your calendar and plan to visit the Great Lakes Energy booth at the home show nearest you.

Stop by to see our Marathon electric water heater, our Convectair electric space heaters that can be used as a whole-house heating option, and our Energy Bike. Our representatives will also be on hand to answer your questions about new Energy Optimization programs that can save you energy, and all our other products and services!

Little Traverse Home Show

North Central Michigan College, Petoskey

West Michigan Home & Garden Show

April 29-30 & May 1

West Michigan Fairgrounds, Ludington

Current Outage Info on gtlakes.com

Visit our website, gtlakes.com, and click on the "Storm Central" box on the home page to view any current power outages in each county and township across our service area.

For more specific information, you can log-in to your electric account online to view the power outage status of your account(s). Information available includes the time the power outage was reported, if a crew is aware of the outage, the estimated restoration time, and the number of other members without power related to your outage.

If you have not created a log-in, you will need to enroll your account(s). To log-in or register, click on the "Access My Account" box on our website and follow the instructions.

To report a power outage, please continue to use our automated outage reporting line, 800-678-0411.

Receive *Country Lines* While You're Away

Simply contact us if you plan to be away for more than a month and give us the address where you would like the magazine sent. Contact us again when you return. Dial 888-485-2537 or see the member services section at gtlakes.com, under "Your Home," and click on "Change of Address."

New Regulations on Horizon

The EPA is moving beyond Congressional intent on greenhouse gas emissions.

Efforts by the U.S. Environmental Protection Agency (EPA) to regulate emissions of greenhouse gases from stationary sources, like power plants, as pollutants under the federal Clean Air Act have drawn objections from Congressional and state leaders and others who say the law—last revised in 1990—was never intended for such purposes.

“EPA is not equipped to consider the very real potential for economic harm when regulating [greenhouse gas] emissions,” stated governors of 20 states in a March 2010 letter to congressional Democratic and Republican leaders. “Without that consideration, regulation will place heavy administrative burdens on state environmental quality agencies, will be costly to consumers, and could be devastating to the economy and jobs.”

Created in 1970, EPA fashions regulations to protect the environment and safeguard public health as authorized in bills passed by Congress. Over time, its jurisdiction has grown to cover numerous items that impact electric bills, including power plant emissions, coal combustion byproducts, and water.

While EPA has begun promulgating a series of climate change-themed rules that will boost the cost of electricity and other energy prices—resulting in higher prices for consumers and businesses—few actions have been as controversial as its move to curb greenhouse gas emissions, notably carbon dioxide, from stationary sources. A 2007 U.S.

Supreme Court ruling determined that EPA can regulate greenhouse gas emissions from new motor vehicles under the Clean Air Act if the agency determines they threaten public health and welfare. In April 2009, EPA took the formal step of issuing an endangerment finding on the emissions and soon began developing greenhouse gas regulations that have since expanded to include power plants (as of January 2011).

Electric cooperatives are urging Congress to delay EPA regulation of greenhouse gas emissions from power plants until there is sufficient time to consider a legislative solution.

“It is the responsibility of Congress to decide this issue, not EPA,” declares National Rural Electric Cooperative Association (NRECA) CEO Glenn English. “The Clean Air Act remains the wrong tool to handle greenhouse gas emissions from stationary sources—it was designed to reduce specific pollutants on a local or regional level where proven technology existed. When it comes to controlling carbon dioxide emissions from coal- and natural gas-fired power plants, tested, commercially viable solutions are not available.”

He concludes: “In many ways, regulating carbon dioxide emissions under the law is akin to using a hammer to tighten a screw. You may eventually get the screw hammered in, but better tools are needed—ones that don’t put your electric bills at risk during these tough economic times.”

“In many ways, regulating carbon dioxide emissions under the law is akin to using a hammer to tighten a screw.”

COOL AS ICE

Never heard of ice climbing? Climbing bloggers and others call it “one of Michigan’s greatest wonders.” Here, Linda Wappner climbs in “the Amphitheater”—one of the many ice curtains that line Sand Point Road, near Munising.

Michiganders fish, snowmobile, ski, skate and slide their way through winter, but ice climbing may be a sport you haven't heard of for battling Cabin Fever. Surprisingly, ice climbing has been here for over 30 years, and our state has the third largest ice climbing festival in the U.S., just behind New Hampshire, with Colorado ranking first.

The Michigan Ice Fest (Feb. 4-6; 906-226-7112 or michiganicefest.com), near Pictured Rocks National Lakeshore in Munising, is a chance to see if this sport is your cup of hot chocolate.

The nonprofit event is bringing in five of the best professional climbers in the U.S. and the world to teach how-to and safety, says Fest organizer Bill Thompson, a seasoned climber and co-owner of Down Wind Sports in Marquette, which provides rental gear and equipment demos at reasonable rates for the three-day weekend; lessons are additional.

The pros are 30-year climbing veteran (including Himalayan expeditions) Mark Wilford; Michigan native Sam Elias, who specializes in solo climbing (the most free and dangerous type); Roger Strong, a leading mixed-terrain climber, best known as the captain on the first two seasons of "The Deadliest Catch" on the Discovery™ Channel; worldwide climbing guide Majka Burhardt; and Steve House, the best all-around climber in the U.S. and best high-altitude climber in the world.

"Having these guys come [to teach ice climbing] is kind of like having Larry Byrd, Michael Jordan and Magic Johnson come in to do a basketball clinic," Thompson says.

Last year's event drew over 400 men, women and kids, from first-time climbers to guys who get paid to climb. "In the evenings," Thompson says, "we pack everyone together in a room above Sydney's Restaurant and make some of the professionals get up and tell us stories. It's a

great time to meet new people or catch up with old friends."

While some enthusiasts even night-climb with a head lamp, Thompson believes the sport is actually safer than others. "It's probably safer than snowmobiling," he says. "No one in Michigan... or the world...has died while ice climbing, and about 30 people die every year just in the U.P. from snowmobiling." The Ice Fest is about teaching people proper technique and safety to lessen those risks, and to shorten the learning curve.

Megan Ostrowski, 22, a local ice and rock climber, agrees. "It's safe if you do it right...I'm accident prone but have never gotten hurt," she laughs, and believes it's something most anyone can do because you don't need previous climbing skills to try it. Climbers wear safety gear, but the biggest danger, she says, is ice breaking off. However, she hasn't seen anyone with injuries other than a few lip or face cuts.

Lake Superior's shore, mostly near Munising, Grand Island and Big Bay, is about the only Michigan area where you can do natural ice climbing, Thompson says, but if going north isn't an option, you can still try this sport. Artificial ice climbing is offered at Peabody Ice Climbing (peabodyiceclimbing@gmail.com or 810-908-1735), with two towers, 45 and 75 feet tall, located on an old farm in Fenton. It's a good place for seasoned climbers to train and beginners to learn. Indoor rock climbing walls and climbing gyms are also good training, Thompson says, and have helped ice climbing gain popularity in the last six years.

People are drawn to rock climbing, he explains, partly because it's something you can't just go and buy gear for and do on your own, and it takes place in spectacular, beautiful areas. "There's something romantic about climbing in general—it's very unique."

Winter Camping?

If ice climbing isn't your idea of celebrating winter, how about winter camping? At least 10 Michigan state parks offer this unique experience, including Algonac, Bay City, Fort Custer, Ludington, North Higgins Lake, Tahquamenon Falls and the Waterloo Recreation Area-Portage Campground. Mitchell, Traverse City and Rifle River parks offer heated restrooms and many offer mini cabins with varying amenities. You can even rent round, pointy-top yurts at Pinckney and Porcupine Mountains Wilderness State Park.

Most parks plan plenty of winter activities, including a free fishing weekend in February, snowshoe-making classes, cross-country skiing by lantern, and snowmobile trails. Or, stop at Muskegon State Park Winter Sports Center to enjoy the new quarter-mile skating trail in the woods, as well as skating rinks and a luge run.

Visit michigan.gov/dnre or contact Maia Stephens (stephensm3@michigan.gov or 517-373-8378) for camping plans, and michigan.org or the "GO-Get Outdoors" website for activities at state parks, recreation areas and harbors.

Above: A helmet, ice tools and boot crampons are some of the gear needed for ice climbing, as shown by Aaron Wener, making his way down after a climb. **Left:** At 6 feet 2 inches tall, Brian Malone stands dwarfed by magnificent ice curtains, formed as water seeps along the Grand Island cliffs in Lake Superior, across from Munising. For the **cover** shot, photographer Shawn Malone, an Alger Delta Co-op member, dangled 80 feet in the air from a harness to get the angle.

RED TAPE OVERLOAD

A flurry of government regulations are set to hit your electric bill.

The cost of electricity hinges on several things—availability, prices for power plant fuels and materials, and the amount of power consumers demand. Now a slew of volatile federal rulemaking has hit power producers.

Perhaps the most pressing challenge facing electric utilities involves U.S. Environmental Protection Agency (EPA) regulation of carbon dioxide and other greenhouse gases as pollutants under the federal “Clean Air Act.” On Jan. 2, EPA began restricting the amount of greenhouse gases emitted by fossil fuel-burning power plants and other stationary industrial sources.

This action will significantly impact electricity production. Fossil fuels like coal and natural gas fuel 70 percent of America’s electricity generation. Since electric co-ops are more dependent on coal than investor-owned utilities and municipal electric systems, the end result will be higher electric bills.

“Clearly, EPA is wielding the Clean Air Act as a bludgeon, pressing it into service because the outgoing Congress was unable to agree on how to curb greenhouse gas emissions blamed for contributing to climate change,” notes Glenn English, CEO of the National Rural Electric Association (NRECA) based

in Arlington, VA.

By failing to pass legislation addressing carbon dioxide and greenhouse gases, Congress essentially left the decision-making up to the EPA. But the Clean Air Act was never intended to regulate carbon dioxide—it was enacted to fight smog and acid rain with proven technologies. No viable, commercially tested solution exists to remove carbon dioxide emissions from power plants.

“Co-ops expect EPA’s rulemaking will eventually have the practical effect—absent breakthrough technology—of eliminating coal as a power plant option,” remarks English. “On top of this, the cost of switching from coal, which has traditionally been plentiful and affordable, to other fuels will be high.”

Only two alternate baseload generation sources can meet America’s demand for safe, reliable and affordable electricity—natural gas, which is priced on a volatile commodities market (and has carbon dioxide emissions to contend with), and nuclear power, requiring a long lead time for construction.

“Electric co-ops are urging Congress and the White House to approve a two-year moratorium on EPA regulation of carbon dioxide greenhouse gases—a delay giving lawmakers

Even if Congress grants a reprieve on greenhouse gas regulations, **RED TAPE** from other EPA rulemaking efforts will trigger higher electric bills.

the opportunity to fashion climate change legislation that protects consumers and keeps electric bills affordable,” English stresses.

Even if Congress grants a reprieve on greenhouse gas regulations, red tape from other EPA and various government rulemaking efforts—the “Clean Air Transport Rule,” cooling water intake requirements, and a decision on treating coal ash as hazardous waste, for starters—will trigger higher electric bills.

Clean Air Transport Rule

Released in 2010, EPA’s Clean Air Transport Rule aims to cap emissions of sulfur dioxide and nitrogen oxides from power plants across 31 eastern states and the District of Columbia. The regulation enables “downwind” areas whose air quality is compromised by power plants to their west to meet federal standards. By 2014, EPA claims the Transport Rule, when combined with other state and federal measures, will reduce power plant sulfur dioxide emissions by 71 percent and nitrogen oxides emissions by 52 percent from 2005 levels—at a cost to utilities of \$2.8 billion per year.

The Transport Rule requires 180 coal-fired power plants to install new pollution-control technology, activate existing pollution controls, or shut down. A second-round version under consideration could impose even tighter standards.

“We’re expecting a number of existing power plants to simply be retired,” notes Kirk Johnson, NRECA vice president of energy & environmental policy. “The cost to comply with the regulation will simply be too much.”

Cooling Water Intake Requirements

Power plants use water from lakes or rivers to cool generating equipment. The federal “Clean Water Act Section 316(b)” sets standards for cooling water intake structures, requiring plant operators to use “best available technology” to protect the environment.

The EPA began reviewing the standards in 2010, launching a cost-benefit analysis of imposing stricter regulations. The rule is expected to be unveiled this month.

The North American Electric Reliability Corporation (NERC), the nation’s bulk

power grid watchdog, estimates this EPA rule will have the greatest potential impact on American energy reserves. If strictly enforced, NERC contends one-third of U.S. electricity capacity may need to be retired.

Coal Ash Debate

To ensure the safe disposal of fly ash and other residues produced by coal-fired power plants, EPA is considering designating the materials—for the first time—as hazardous waste.

Classifying these “coal combustion byproducts” (CCBs) as hazardous could cost billions and force increases in electricity rates. Each year, the U.S. electric utility industry produces about 130 million tons of CCBs (roughly 8 percent from power supply cooperatives).

“In previous analyses, EPA determined CCBs do not warrant regulation as hazardous waste under the federal Resource Conservation and Recovery Act; oversight was generally in place at the state level to ensure adequate management,” points out Johnson. “Nothing about CCBs has changed since then. Electric co-ops contend coal ash is appropriately regulated and oppose efforts to have it branded as hazardous waste.”

Carrying the hazardous label in any form (EPA could classify CCBs as “special wastes,” making them subject to all permitting, handling and disposal requirements that apply to toxic items) will severely hamper beneficial uses of CCBs, Johnson warns. “No matter how you slice it, CCBs will be considered unsafe.”

Currently, one-third of fly ash (used as a cement replacement) and more than one-fourth of scrubber sludge (converted into synthetic gypsum for wallboard manufacturing) are recycled. For every ton of cement replaced by fly ash, a ton of greenhouse gas emissions is avoided.

More than 10,000 co-op consumers sent letters to the EPA in 2010 voicing their concern and asking EPA not to brand coal ash as hazardous. EPA had not reached a final decision as of press time.

Perry Stambaugh writes on consumer and cooperative affairs for NRECA. Megan McKay-Noe, CCC, contributed to this article.

We’re expecting a number of power plants to simply be retired. The **COST TO COMPLY** with the regulation will simply be too much.

—Kirk Johnson, NRECA

Beware of Dramatic Heating, Cooling Claims

Get the facts before buying into a “miracle” electric heater or evaporative cooler.

If something sounds too good to be true, it probably is.” That saying rings especially true when it comes to claims about energy-saving devices, particularly those that indicate they can dramatically cut your heating and cooling costs.

Electric Heaters

Ads made to look like news stories abound for “Amish style” fireplaces, a “miracle device” that supposedly can slash your heating bills. In actuality, the appliance is simply a space heater hidden inside a false fireplace with a wooden mantle.

If you were to use a space heater eight hours a day, five days a week for a month, it would cost about \$15. But whether it can cut your heating bill depends on several factors.

Space heaters only warm a small area. You may save some money if you turn down

the thermostat (sometimes to as low as 50 degrees), site the space heater in a room with people in it, and then close off that room from the rest of the house. But space heaters cannot come close to replacing energy-efficient central heating or weatherization improvements. So, while it’s technically possible to cut your heating bill by 50 percent using space heaters, for most people, it’s impractical.

Evaporative Coolers

On the flip side are evaporative coolers that say they will inexpensively cool a room in your home. The inside of the unit consists of cold water and frozen ice packs, like you would use in a lunch box. The water wets a curtain; a fan blows air through the curtain and over the ice packs, theoretically providing a cool breeze. Evaporative coolers operate best in low-humidity regions.

But do they actually work? A *Consumer Reports* experiment found that even in desert-like conditions, one device cooled a test room only 2 degrees over four hours.

“When it comes to saving energy, there are no magic solutions,” asserts Brian Sloboda, senior program manager for energy efficiency at the Cooperative Research Network, the research arm of the National Rural Electric Cooperative Association. “Anyone promising to slash your utility bill by double digits is stretching the truth to the breaking point.”

The bottom line: there’s no substitute for good old-fashioned energy efficiency measures like weatherstripping around doors, caulking around windows, adding insulation to your attic, plugging leaks in ductwork, and regularly cleaning or replacing furnace filters. Visit ConsumerAffairs.com for more information.

Building Value Days Sales Event

Open House Event
Feb. 10-12, 2011
 from 8 a.m.–6 p.m.

Now through the end of February, get special discount pricing on a new Morton building. As America’s leader in post-frame construction and in business for over 100 years, we offer a wide range of building options to ensure you get the building you want and need.

Gifts for Everyone

As our way of saying thank you for stopping in, we will have gifts for everyone who attends our open house.

For details, call or visit us online:
 800-447-7436 • mortonbuildings.com

A “Two Pronged” Approach to Home Electrical Safety

Consumers can depend on a pair of important safety devices to protect them from electrical hazards in the home: ground fault circuit interrupters (GFCIs) and arc fault circuit interrupters (AFCIs). Each device protects against different dangers: GFCIs address shock hazards while AFCIs fight fire hazards.

Get Grounded!

According to the Electrical Safety Foundation International, GFCIs have cut the number of home electrocutions by one-half. By detecting ground faults—an unintentional electric path between a source of current and a grounded surface; essentially, current leaking to the ground—a GFCI protects you from severe or fatal electric shocks. It can also prevent some electrical fires.

If you have ever experienced an electric shock, it probably happened because part of your body contacted an electrical current and provided a path for the current to go to ground. If your body provides the path, you can be seriously injured.

The GFCIs constantly monitor electricity moving through a circuit. If the current flow differs from that returning, the device quickly switches off power.

Fighting Fire

The AFCIs, a relatively recent technology, help prevent home fires caused by arcing faults in damaged or deteriorated wires and cords. Home wiring problems, such as sparking, are associated with more than 40,000 home fires each year, according to the Consumer Product Safety Commission. These

fires kill more than 350 and injure 1,400 victims annually.

Nominal arcs may happen in the brushes of a vacuum sweeper or light switch; dangerous arcs can occur in frayed cords. When unwanted arcing occurs, it generates high temperatures that can ignite nearby combustibles such as wood, paper and carpets.

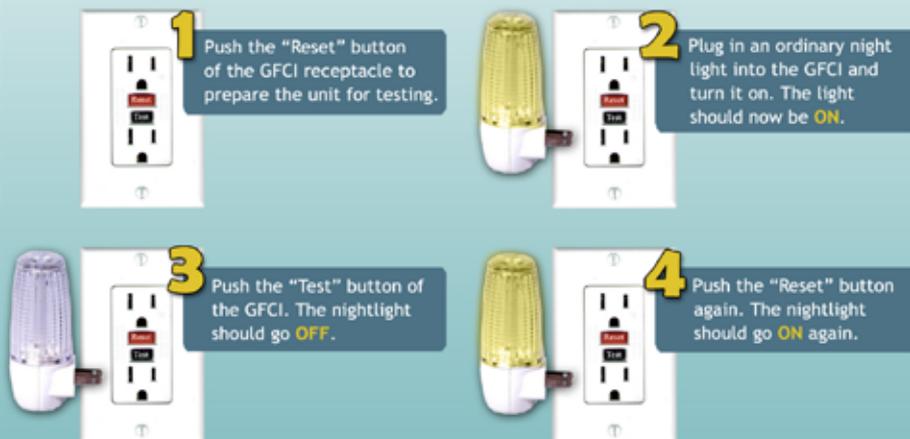

Conventional circuit breakers only respond to overloads and short circuits. By the time a fuse or circuit cuts power to defuse these conditions, a fire may have already started. The AFCIs use unique current-sensing circuitry to discriminate between normal and unwanted arcing conditions. In the event of an arcing fault, the AFCI shuts off electricity flowing through a circuit.

For more information on where to install GFCIs and AFCIs, visit cpsc.gov.

How to test electrical outlets

Since the 1970s ground fault circuit interrupters (GFCIs) have saved thousands of lives, helping cut the number of home electrocutions in half. The safety devices prevent deadly shock by quickly shutting off power to the circuit if the electricity flowing into the circuit differs from the amount returning. The safety devices should be used in any indoor or outdoor area where water may come into contact with electrical products.

GFCIs should be tested once a month to make sure they're working properly. To test a device, follow these four steps:

Source: Electrical Safety Foundation International

Stay Clear, Stay Safe!

A downed power line could cause serious injury or death. Follow these simple tips to stay safe:

- Assume all power lines are energized and dangerous. Even lines that are de-energized could become energized at any time.
- NEVER touch a downed power line! Immediately call 9-1-1 or your electric co-op to report it.
- If someone is injured as a result of contact with electric current, call 9-1-1 immediately. DO NOT try to assist them—you could be injured or killed.
- If a power line falls across your vehicle while you are in it, stay inside until help arrives.

Raising Ethical Kids

Nellie is crazy about stories. And not just any stories. At three-and-a-half, she favors stories about familiar characters facing fanciful dilemmas.

Nellie: Grandma, tell me a story about Nellie and Annie and their cousins who fall into a Strawberry Shortcake story and they meet a polar bear at the North Pole and he gets lost and turns into a dolphin.

Me: Rrrrrriiiiiight.

Like storytellers of old, adults try to spin a moral into each story. Fictional Nellie and Annie walk away learning about honesty, perseverance and (this is a biggie) obedience. Why miss an opportunity to impart good values through the vehicle of imagination?

If ever there was a time to find engaging ways to influence our kids' beliefs and behaviors, it's now. Parents compete for the attention and interest of today's plugged-in, media immersed children. Stories can be a powerful tool in helping children "see" ethical behavior in action.

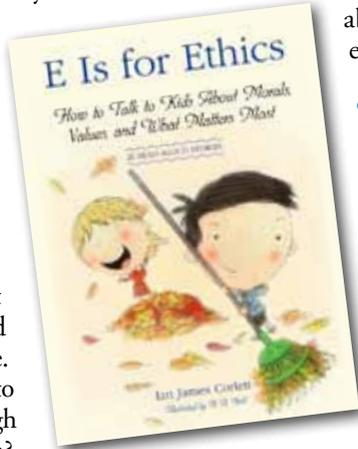

Fortunately, anthologies of "character stories" are available to help imagination-challenged adults. A new book called "E is for Ethics: How to Talk to Kids About Morals, Values, and What Matters Most," goes one step further. Author Ian James Corlett adds thought-provoking questions after each simple story—geared towards kids three to 10 years old—to foster family discussion about specific ethics.

"This book was not meant to be an authority on all things ethical, says Corlett, an award-winning animated film maker and veteran in children's television programming. "It is meant to help parents who may not be able to whip up a batch of 'teaching' stories at the drop of a hat and to spark discussions with their kids."

As it turns out, discussion is good, because ethics training takes more than just listening to good stories. It's a way of life that begins when your little one is born and takes place every single day.

"When we had our own kids I became very meditative about how to best build strong

character," explains Corlett, a father of two. "My background in writing and creating children's programming gave me a unique perspective on how to reach kids. We started our weekly 'family fun time' discussions as soon as our kids could sit up and listen. Even very young kids have an amazing ability to grasp these topics, especially if they are presented

“Modeling ethical behavior starts by showing a child respect, no matter how little he is.”

in a 'story time' setting.”

Corlett chose topics for the book that would appeal to a broad range of families, no matter what their background or faith. Each of his 26 stories demonstrates a different human ethic such as forgiveness, courage, loyalty, gratitude, and acceptance.

"I strongly believe that every family wants to build kids who have strong character," Corlett says.

Ready to start? Researchers point to some winning strategies—including storytelling—that will help you give your child a strong ethical foundation that will last a lifetime.

Raise sensitivity

Morals and ethics are really all about having empathy and making choices that are good for others. Expand children's emotional vocabulary by describing the emotions you see them expressing. When discussing moral transgressions, use the same words: "Tim feels sad when you don't share your toys."

Talk with older children about scandals in the news. Ask: "What do you think that person really did wrong?" If your child believes that getting caught was the only downside of unethical behavior, then point to the damage done to others as a result.

Talk about and model ethical decision making

Modeling ethical behavior starts by showing a child respect, no matter how little he is. Then, watch for teachable moments as daily dilemmas emerge.

"When you see someone pop change into a charity jar, take that opportunity to talk about what just happened," Corliss suggests. "Or when someone is polite and holds a door open, talk to your kids about ethics, values and kindness."

Talk about the ethical dilemmas you've faced or that your children might face with friends or at school. What choices could they

make? What might result from each choice? (Using questions rather than preaching generally works better.)

Motivate and reward

Help children see why behaving ethically matters. Acknowledge ethical choices when you see your children making them. Help them feel proud of their own good deeds, which becomes motivation for ethical behavior.

Build character

Teach children to put others' needs first, even when it's hard to do. Reward perseverance, teach them to wait for what they want, cultivate courage, and support their leadership in situations that call for it.

Be patient—and have fun!

These lessons take time, and very young children especially will not absorb them easily. But over time they can learn to become ethical citizens in a modern world.

"Spend time with your kids. That is the single most important thing you can do as a parent," Corlett advises. "When a solid dose of fun is added, I think that kids really do grasp ethics, even if it involves deep or abstract concepts."

Linda Wacyk is a regular Country Lines freelance writer, educator, grandmother and content empty-nester.

Building Pickford Library

Grassroots efforts build better communities, especially in hard times.

It's reminiscent of the grassroots efforts that brought electric power to the Eastern Upper Peninsula in the 1930's to form what is now Cloverland Electric Cooperative. The residents in and around Pickford (population 1,584), have pulled together the resources to open a public library in an abandoned shoe store in a mostly deserted section of Main Street. What's more, they did it during an economic downturn.

The library, which opened its doors in October 2010, is more than just a collection of books. It's a meeting and learning place for residents in this rural area and, surprisingly, a potential driver of economic growth.

"Studies have shown when people come to libraries they do more downtown," explains librarian Kenneth Miller, director of the Bayliss Library in nearby Sault Ste. Marie. He also said more people use libraries during a sour economy.

The new library, which is a branch of Bayliss, has just about everything you find in a larger library: internet access, a statewide lending library, and an invaluable research tool commonly referred to as MeLCat (Michigan eLibrary Catalog and Resource Sharing System).

Pickford library, however, has maintained a decidedly country charm with the old store front, tall ceiling and hardwood floors. The building, which is over 75 years old, was chosen by architects for its solid construction and by organizers for its spaciousness and potential for expansion.

Getting the branch library opened in this small community was no walk in the park. Miller, a 35-year library veteran, had his doubts when the idea was first proposed in 2008, mostly because of the cost associated with starting and maintaining a library. But then he didn't know Pickford resident Melanie Greenfield. A tireless volunteer and former business owner, Greenfield got the idea for opening a library after attending a community foundation meeting where the idea was casually tossed around. The rest, as they say, is history.

With the wheels now in motion, Greenfield gathered as many people as she could to start the fundraising efforts. What followed were

some of the usual fundraisers: bake sales, a used book sale, proceeds from restaurant dinners, including the "Flying Pancake Breakfast," and a portion of the proceeds from a Farmer's Market and Fall Fest. Even 4th grader Cassie Beemish got into the act, selling cookies she baked from her grandmother's recipes.

"We needed to prove ourselves," Greenfield recalls of those early days of fundraising. "If we wanted it, we needed to make it happen." At the time, the group was looking to raise \$117,000—enough to open the doors and run the place for three years.

And make it happen they did. Soon, larger donations were coming in from outside the area, including \$5,000 dollars from an anonymous donor in Traverse City, and most recently over \$34,000 from the Sault Tribe of Chippewa Indians. Besides cash donations, local businesses donated their time, talent and materials. Marble Construction worked on the most pressing concerns with building improvements; Josh and Jared Dyer did the plumbing; Savoie Electric wired the building; and Ledy Cabinetry donated the materials for and built a beautiful marble circulation desk. Lighthouse.net, a subsidiary of Cloverland Electric Cooperative, supplied and installed the equipment needed for internet service.

"Every time we turned around somebody was giving us something," says Miller, who is astonished to this day at how the community pulled together to bring a library to this mostly farming community. So is Bob Hunter, a library board member who was impressed by how much support came from outside of Pickford.

Bayliss library donated expensive shelving units, but something even more valuable: their expertise. Miller and his experienced staff made the 20-minute drive out to Pickford to help volunteers and new librarian Michelle Satchell arrange the furniture and other items so that patrons can read, study,

Micki Schmitigal and her daughter Jill enjoy some story time together at the Pickford Library.

play with puppets, and simply relax.

The fundraising efforts aren't over nor are plans to expand on the services currently offered. Satchell hopes that the spacious room in the back of the library can be used for various classes, especially in the midst of cuts made to school programs, such as art, in the Pickford area schools.

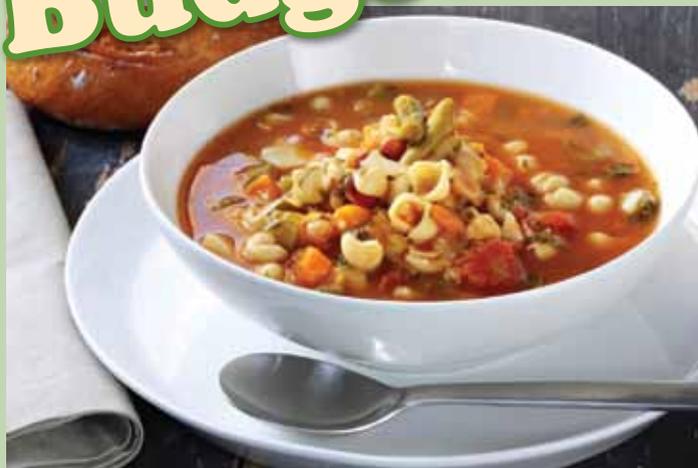

The real challenge may be in keeping the doors open, which will depend largely on a successful millage and additional fundraising efforts.

"I didn't think at first (it would be sustainable), but I think there is a group of people out there that will make it happen," Miller adds.

For information on making a donation to the library or hours of operation, call 906-647-1288.

What's building in your community? Email a few short paragraphs describing it to knudtson@countrylines.com or send to G. Knudtson, *Michigan Country Lines*, 2859 W. Jolly Rd., Okemos, MI 48864.

You won't skimp on delicious or nutritious with these recipes sent in by readers. Find hundreds more at countrylines.com.

Mexican Wedding Cake

- 2 c. flour
- 2 c. sugar
- 2 eggs
- 2 t. baking soda
- 1 20-oz. can crushed pineapple, with juice
- 1/2-1 c. chopped walnuts, reserve 1/4 cup

Frosting:

- 1 stick butter or margarine
- 1 t. vanilla
- 8 oz. cream cheese, softened
- 2 c. powdered sugar

Mix all cake ingredients together and pour into an ungreased 9x13-inch cake pan. Bake at 350° for 35-40 minutes until a toothpick inserted near the middle comes out clean; cool. For frosting, beat butter, vanilla, cream cheese and powdered sugar with an electric mixer until smooth. Spread on cooled cake. Sprinkle with remaining nuts.

Dee Cook, Fenwick

Steak and Vegetable Braciole

- 1/2 c. shredded carrot
- 1/3 c. chopped zucchini
- 1/3 c. chopped red pepper
- 1/4 c. sliced green onions
- 2 T. grated Parmesan cheese
- 1 T. snipped fresh parsley
- 1 clove garlic, minced
- 1/4 t. ground black pepper
- 2 lbs. boneless round steak
- 2 c. marinara sauce
- hot cooked pasta of choice

Cut meat into six serving-size pieces. Place each piece of steak between two pieces of plastic wrap. Using a meat mallet,

pound steak pieces to 1/4-1/2-inch thick. For filling, in a small bowl, combine carrot, zucchini, sweet pepper, green onions, cheese, parsley, garlic and black pepper. Spoon 1/4 cup of filling onto each piece of meat. Roll up meat around filling; secure with clean kitchen string or wooden toothpicks. Place meat rolls in a 3 1/2 or 4-quart slow cooker. Pour marinara sauce over meat rolls. Cover and cook on low setting for 8-10 hours or on high setting for 4-5 hours. Remove string or toothpicks; discard. Serve over hot cooked pasta.

Jenn Rekus, Detroit

Taco Pie

- 1 lb. ground beef
- 1 onion, diced
- 1 packet taco seasoning
- 15 oz. tomato sauce
- 1 tube Pillsbury® Pizza Crust
- 8 oz. shredded Mexican blend cheese

Brown ground beef with onion; drain. Add taco seasoning, tomato sauce and amount of water specified on taco seasoning packet; simmer 10 minutes. Spray a 9x13-inch baking dish. Press pizza crust over bottom of pan. Top with meat mixture and cheese. Bake at 400° for 20-25 minutes.

Marge Bagnell, Mancelona

Zesty Minestrone Soup

- 1 med. onion, chopped
- 2 c. diced zucchini
- 2 cloves garlic, finely minced
- 1 T. vegetable oil
- 1 t. oregano
- 2 T. chopped parsley, fresh or dry
- 1 10-oz. pkg. frozen corn, in butter sauce
- 3 14.5-oz. cans diced tomatoes, with green chilies
- 1 can black beans, rinsed and drained

- 4 c. water
- 1/2 c. dry pasta, elbows or small seashells

Microwave corn according to directions on package; set aside. In a large saucepan, heat oil over medium heat. Sauté zucchini, onion and garlic until tender. Stir in corn, tomatoes, beans, water, oregano and parsley. Bring to a boil; reduce heat and simmer 15 minutes. Add pasta and cook until tender, 8-10 minutes.

Carlyn Page, Traverse City

Soupa

- 1-1 1/2 lbs. hamburger
- 1 onion, minced
- 1 24-26 oz. can tomatoes, diced or crushed
- 1 49.5 oz. can chicken broth
- 12 oz. tomato paste
- 1 lg. head cabbage, coarsely shredded and chopped
- salt and pepper to taste
- 1 loaf white bread, sliced

Brown hamburger, drain and add onion, tomatoes, salt and pepper. Simmer 15 minutes. In

a large bowl, dissolve tomato paste with chicken broth. Butter a large covered roaster pan. Spread half of the cabbage on the bottom; salt and pepper to taste. Layer half of the bread over the cabbage. Spread hamburger mixture over bread and top with remaining cabbage. Salt and pepper to taste. Layer remaining bread over cabbage. Pour broth mixture over all. Bake, covered, at 325° for 2 1/2 hours. Do not uncover during cooking.

Marilyn Eaton, Lake

Chicken Noodle Soup

1 roasting chicken or 4 boneless chicken breasts
5 carrots, sliced 1/4-inch thick
4 stalks celery, sliced
3/4-1 c. diced onion
1/2 t. salt
Noodles:
2 eggs, beaten
4 T. milk
1 t. salt
2c. flour

Clean and cut-up a whole chicken; place pieces into an 8-quart stockpot and cover with 2 quarts water. Add salt and bring to a boil. Cook until chicken is tender; remove

from pot, reserving broth. Remove skin and bones from chicken pieces; tear meat into small pieces. Return chicken pieces to broth and add carrots, celery, and onion; cook for 30 minutes. Meanwhile, combine eggs and milk; add salt and flour, mixing to a soft dough. On a floured surface, form dough into a ball. Roll dough out very thin. Cut dough into 1/2-inch by 1 1/2-inch strips. Drop noodles into boiling soup and cook about one hour, until noodles are tender and cooked through. Season with salt and pepper to taste.

Pat Essner, Lake Odessa

Grandma Rose's Rice Bake

1 c. cheese, cut into small cubes
2 c. cooked rice
2 T. butter
3 eggs
1 c. milk

Mix rice and cheese in a bowl. Beat eggs and milk together in another bowl. Pour egg mixture over rice mixture; stir well. Pour into a buttered 2-quart baking dish; dot with butter. Bake at 325° for 30 minutes.

Pat Thomas, Ewart

Saucy Stuffed Peppers

8 oz. box Spanish rice mix
1 lb. ground beef
1 26-oz. jar pasta sauce
2 lg. green bell peppers
1 t. black pepper
1 t. dried Italian seasoning
1/4 c. grated cheese
1 c. shredded cheese, any variety

Prepare rice mix as directed; set aside. Wash and clean peppers. Cut in half lengthwise. In a bowl, combine cooked rice and ground beef. Generously fill peppers with mixture. Place peppers in a casserole dish. Pour pasta sauce over peppers; sprinkle with black pepper, Italian seasoning and grated cheese. Cover and bake at 350° about 45 minutes. Uncover; sprinkle with shredded cheese and bake until cheese melts and peppers are tender.

Mike Harrington, Wayland

Feta-Stuffed Chicken

1/4 c. crumbled basil-and-tomato feta cheese
2 T. cream cheese
4 skinless, boneless chicken breast halves, about 1 1/4 lbs.
1/4-1/2 t. black pepper
dash salt
1 t. olive oil
1/4 c. chicken broth
1 10-oz. pkg. fresh spinach, trimmed
2 T. walnut or pecan pieces, toasted
1 T. lemon juice
lemon slices for garnish

In a small bowl, combine feta and cream cheese; set aside. Using a sharp knife, cut a horizontal slit through the thickest portion of each chicken breast half to form a pocket. Stuff

pockets with cheese mixture. Secure openings with wooden toothpicks. Season chicken with salt and pepper. In a large nonstick skillet, cook chicken in hot oil over medium-high heat about 6 minutes on each side until it is tender and no longer pink; remove from skillet. Cover and keep warm. Add chicken broth to skillet. Bring to boiling; add half of the spinach. Cover and cook about 3 minutes just until spinach is wilted. Remove spinach from skillet, reserving liquid in pan. Repeat with remaining spinach. Return all spinach to skillet. Stir in nuts and lemon juice. To serve, divide spinach mixture among 4 dinner plates; top with chicken breasts and garnish with lemon slices.

Jennifer Hansen, MECA

Cool Whip Pie

1 20-oz. can unsweetened, crushed pineapple, do not drain
1 3.5-oz. box instant vanilla pudding
8 oz. Cool Whip®, thawed
1 9-inch graham cracker pie crust

In a large bowl, pour pineapple in its juice. Sprinkle pudding mix on pineapple; blend until pudding mix is dissolved. Fold Cool Whip into pineapple mixture. Spoon mixture into a graham cracker crust. Cover; refrigerate at least 2-3 hours or freeze until ready for use.

Robert Serocke, Goetzville

Lemon Tuna Cakes

2 cans tuna fish, well drained
3/4 c. real mayonnaise
2 c. Italian dried bread crumbs
1 T. parsley
1/2 t. salt
1/4 t. pepper
1 t. hot sauce
2 T. lemon juice
4 c. cooked noodles, any style
1/4 c. vegetable oil

In a large bowl, combine tuna, mayonnaise, bread crumbs, parsley, salt, pepper and hot

sauce; mix well with a fork so there are no lumps of tuna. In a large skillet with a lid, heat vegetable oil over medium heat. Using 1/4 of the mixture at a time, form tuna mixture into burger-sized patties, about 5-inches in diameter and 1-inch thick. Fry patties in hot oil for 3-5 minutes on one side, turning when browned and cooking about 3 minutes more on the other side, cooking until browned. Sprinkle lemon juice evenly over all patties. Serve with hot noodles of choice.

Danielle Cochran, Grayling

State's Forests Face New Foreign Insect Threats

While some resource managers are keeping their focus on invasive fish, such as the Asian carp or other foreign-sourced aquatic or land-based plants, one veteran Michigan forester is keeping his eyes on new threats to the health of the state's 19 million acres of forest.

Bill Botti, a retired veteran DNR forester and current executive director of the Michigan Forest Association, says each new foreign insect and plant disease invader from other parts of the world brings a threat to our valuable state forestlands.

Michigan is considered one of the most forested states in the U.S. Our many woodlands support thousands of jobs in forest industries that provide people with needed wood and fiber products and one of the largest recreational tourism bases in the country. In the Upper Peninsula alone, forestry is the number one industry and job source.

With so much at stake economically, each new exotic threat to forest health is now being given serious attention within the forest community. Forests also support the wild game sportsmen seek; they protect, shade and cool streams where fishing is high in interest; and they offer hiking and skiing trails, birding, nature preserves and wildflowers.

All of these forest experiences are at risk.

The emerald ash borer is a prime example of a recently arrived invasive insect that has cost major damage to the state's native ash trees. First discovered in southeast Michigan in 2002, it has now spread to both peninsulas. Many thousands of acres of valuable ash have been destroyed in trying to stem this invader's spread.

"Once one of these insects becomes established in this country, we move it all around in firewood," Botti explains. "We know better, but we just can't seem to break the habit."

New threats seem to appear every year. "Thousand Cankers Disease of walnut has (now) been found east of the Mississippi—in Tennessee. The disease is carried by the walnut twig beetle, which is thought to be native to northern Mexico and the U.S. Southwest," Botti adds. Perhaps the beetle won't thrive in the colder climate of the North, but hang-on to that thought.

Foreign insect invaders are not new to Michigan. It was once thought that Dutch elm disease wouldn't cause any damage in

northern Michigan because the vector, the European elm bark beetle, couldn't survive the cold winters. Wrong! Dutch elm disease, which just about wiped out most of our stately American elms, has been in this country for many years, arriving in shipping cargo from Western Europe.

One of the older foreign invaders to do major damage is the Gypsy moth, which still has periodic outbreaks that threaten many hardwoods. This

An invasion by the Asian longhorn beetle (above, right) could cause tremendous damage to Michigan's woodlands.

moth came from Europe and in spite of major efforts to halt its damages—from aerial spraying to the removal of infected trees—this pest is still with us.

With today's increased world trade, new invaders keep appearing, Botti says. "One worrisome exotic is the Asian longhorn beetle that has caused tremendous damage in New York City and Chicago." A large outbreak was found in Worcester, MA, a year or two ago and is being treated aggressively. This bug especially likes maples, but will also kill poplars, willows, elms, chestnut and others. Botti notes that shipping between states opens the door for a wider spread, so tracking its spread is vital to Michigan's important maple woodlands.

Just as many of the current invasive fish, mussels and threats from other foreign invaders were brought in via Great Lakes shipping, new insects are being found more frequently and with further potential impacts on our native forests.

"These pests are moved around the world

in wood products with bark still attached," Botti says. "Seems as if it would be simple to stop—just outlaw crates or pallets with bark on them. But policing that is very difficult—especially when inspectors are more concerned about searching for bombs or explosives."

Each invading foreign insect holds new threats to Michigan's valuable forests that are every bit as serious as the Asian carp threat is to the Great Lakes, but Botti

notes we haven't given it as much public attention as the invasive fish.

"Maybe this year – the International Year of Forests – we will give it some more public attention."

"Early detection of any pest offers the greatest opportunity for administering control options. Private landowners and citizens alike are encour-

aged to play a more active role in early detection of forest pests, foreign or domestic," adds Rick Lucus, conservation district forester in Osceola/Mecosta counties.

"Forest owners should get in the habit of watching for needle and leaf discoloration, missing foliage, shoot and branch injury, and/or shoot and branch galls on your trees.

"When any of these signs appear, collect a sample and bring it to your nearest Conservation District office, MSU Extension office or MDNRE Service Center for identification and control recommendations," Lucus advises.

Owners of large wooded acreages might consider discussing their situation with a consulting forester. The Michigan Forest Association (MFA) has listings of consulting foresters who serve your area. Contact miforest@acd.net for more information.

MFA represents the 350,000-plus private, nonindustrial forest owners and tree farmers who own more than one-half of Michigan's forests. The author also edits Michigan Forest Magazine for MFA.

Don Ingle is an avid outdoorsman and award-winning outdoors writer that submits regularly for Country Lines.

African Gem Cutter Makes \$2,689,000 Mistake...Will You?

This story breaks my heart every time. Allegedly, just two years after the discovery of tanzanite in 1967, a Maasai tribesman knocked on the door of a gem cutter's office in Nairobi. The Maasai had brought along an enormous chunk of tanzanite and he was looking to sell. His asking price? Fifty dollars. But the gem cutter was suspicious and assumed that a stone so large could only be glass. The cutter told the tribesman, no thanks, and sent him on his way. Huge mistake. It turns out that the gem was genuine and would have easily dwarfed the world's largest cut tanzanite at the time. Based on common pricing, that "chunk" could have been worth close to \$3,000,000!

The tanzanite gem cutter missed his chance to hit the jeweler's jackpot...and make history. Would you have made the same mistake then? Will you make it today?

In the decades since its discovery, tanzanite has become one of the world's most coveted gemstones. Found in only one remote place on Earth (in Tanzania's Merelani Hills, in the shadow of Mount Kilimanjaro), the precious purple stone is 1,000 times rarer than diamonds. Luxury retailers have been quick to sound the alarm, warning that supplies of tanzanite will not last forever. And in this case, they're right. Once the last purple gem is pulled from the Earth, that's it. No more tanzanite. Most believe that we only have a few years supply left, which is why it's so amazing for us to offer this incredible price break. Some retailers along Fifth Avenue are more than happy to charge you outrageous prices for this rarity. Not Stauer. Staying true to our contrarian nature, we've decided to **lower the price of one of the world's rarest and most popular gemstones.**

Our 2-Carat *Sunburst Tanzanite Ring* features marquise-cut gems set dramatically in gorgeous sterling silver. Each facet sparkles with the distinct violet-blue hue of the precious stones. Behind the shine you'll find that the exquisite silverwork of the setting calls to mind the detailed treasures being produced by Europe's finest jewelers. This is a ring designed to impress and it does not disappoint.

Now is the point where opportunity knocks. If you open that door today, you can own this spectacular ring for less than \$100. If you wait? We can't say for sure.

Your satisfaction is completely guaranteed. For our client-friendly approach, Stauer has earned a rare **A+ rating from the Better Business Bureau**, a rating we wish to keep. So, of course, your satisfaction is 100% guaranteed. If you are not completely aglow with the *Sunburst Tanzanite Ring*, send it back within 30 days for a prompt and courteous refund. But, please don't wait, our supply is dropping rapidly.

JEWELRY SPECS:

– 2 ctw genuine tanzanite – .925 sterling silver setting – Ring sizes 5–10

Inspect Ductwork Before Cleaning

Healthy indoor air should be a goal for any family. This is particularly true in today's more energy efficient, airtight houses where the air quality is often worse than outdoor air. In addition to some dust from the ducts, there are many sources of indoor pollutants, including cleaning, cooking, and the release of gases from synthetic materials in the home. Many of these can be removed from indoor air with a combination of whole-house, furnace-mounted air cleaners and smaller individual room air cleaners.

Much of the dust in heating and air-conditioning ducts tends to adhere to the duct surface, so it never gets into the air circulating throughout the house, according to the U.S. Environmental Protection Agency (EPA). Just because you see some dust collecting on the grill over air registers does not mean the ducts are very dirty and need to be cleaned.

Other than just a benign, fine layer of household dust, some potentially harmful particles can be hiding inside the ducts. For example, especially in humid areas, mold spores can cause serious allergic reactions in some people.

Bacteria can also live in some ducts under certain conditions. Very fine particles from cigarettes or wood-burning fireplaces can become airborne and cause respiratory problems. Test kits are available to take a sample of the dust from inside the ducts and have it tested for mold and other harmful contaminants.

Although it is commonly referred to as "duct cleaning," if you choose to have it done, it is important to have the entire HVAC (heating, ventilation, air conditioning) system cleaned. This includes the furnace and air conditioner blower, heat exchanger/coils, and drain pans in addition to the ductwork. Air conditioner evaporator coils can collect a lot of dirt because they get damp when the unit is running, and dust in the air sticks to the wet surfaces. This reduces the energy efficiency of the entire system.

If the contractor who services your HVAC system also does duct cleaning, you may get a discount by having both done at the same time. The typical cost for a complete cleaning ranges from about \$500 to \$1,000, depending on the size of your home and the

Photo: Widmers Cleaners

A long vacuum hose is inserted into the wall return duct. It is connected to an indoor vacuum unit with a HEPA exhaust filter.

complexity of the duct system.

You may want to have the duct system inspected before going to the full expense of a cleaning. Look for a company that will deduct the inspection cost from the total cost should you choose to have it cleaned. Technicians conduct the inspection by looking into ducts and the furnace blower unit and using mirrors at bends. They can also move a mini TV camera through the ducts.

When selecting a duct-cleaning company, there are several factors to consider. As with any project, the reputation of the company is highly important. Although the ducts can be inspected afterward to see how well they were cleaned, your best assurance is to start with a reliable contractor. Always check references with their past customers.

The National Air Duct Cleaning Association (NADCA) is the trade group that certifies HVAC system cleaning contractors. The certification is legitimate and requires extensive training. For a company to be certified, it must have a certified specialist on staff. Find a national listing of certified companies, along with its number of specialists, at nadca.com.

Also, when selecting a contractor, ask about the type of cleaning equipment each uses. If an indoor vacuum unit is used, it must have a high efficiency particulate arrestance (HEPA) filter on the exhaust to trap all the

particles. Some of the particles they dislodge from the duct walls can be very fine, and a lesser quality filter will not remove them from the exhaust air.

Another option is an outdoor truck with a built-in vacuum unit and a long hose. Because it is located outdoors, the exhaust filter is not critical. These large vacuums are very powerful to overcome the air flow resistance in the long hose. The only problem is that during winter they suck quite a bit of the heated air out of your house during the cleaning process.

Some duct-cleaning companies may suggest spraying a chemical biocide inside the ducts to kill mold and bacteria and to keep them from growing in the future. If you do have this procedure done, make sure they use EPA approved chemicals designated for sheet metal ducts.

Wolverine Purchases Ownership in OVEC Power Plants to Serve Members

Wolverine Power Cooperative has purchased a 150-megawatt ownership in the Ohio Valley Electric Corporation (OVEC) from FirstEnergy Generation Corp. The sale was completed in December 2010.

OVEC consists of two coal-fired generating plants with a combined total of 11 units, each capable of generating 217 megawatts. The Clifty Creek plant, located in Madison, IN, has six units. The remaining five are located at the Kyger Creek plant near Gallipolis, OH.

“The OVEC plants are baseload power plants,” explains Dan DeCoeur, vice president of power supply. “They typically operate 24 hours a day, seven days a week.”

Wolverine needs baseload supply to serve its members. Energy from these plants will replace, in part, the cooperative’s primary wholesale power contract, set to expire at the end of 2011. Wolverine was able to purchase OVEC for a competitive price at a time when interest rates are low.

“OVEC has installed modern pollution control equipment on the Kyger Creek and Clifty Creek units,” DeCoeur says. “The two plants operate

more cleanly than most power plants in Michigan and the Midwest.”

A group of utilities formed OVEC in the mid-1950s to serve the Atomic Energy Commission’s uranium-enrichment facilities in Portsmouth, OH. When the commission’s facilities were closed, the OVEC utilities received the full output of the two plants.

FirstEnergy will remain an owner in OVEC, with approximately 100 megawatts. Several other utilities, including American Electric Power, Duke Energy and Buckeye Power, an electric cooperative, also have ownership interests in OVEC.

This is Wolverine’s second purchase from FirstEnergy. In March 2010, Wolverine acquired the natural gas-fired Sumpter peaking plant near Belleville, MI. Sumpter’s four units are capable of generating 340 megawatts of electricity and are operated during periods of high demand.

Wolverine formed a new subsidiary, Peninsula Generation Cooperative, to purchase ownership in OVEC.

“The OVEC purchase offers us affordability and reliability for

our members,” DeCoeur says. “While it’s a significant purchase, we will continue to pursue additional baseload opportunities, including the Wolverine Clean Energy Venture development near Rogers City, MI.”

WCEV Update

Wolverine filed an appeal in Missaukee County Circuit Court in August 2010, asking the court to reverse the denial of the air quality permit for our Wolverine Clean Energy Venture (WCEV) power plant development and return it to the Michigan Department of Natural Resources and Environment for reconsideration.

Wolverine also asked the court to declare Gov. Jennifer Granholm’s “Executive Directive 2009-2” unlawful. The directive imposed substantial need-based procedural requirements on air permit applicants.

The court had not ruled on the appeal as of the deadline for this story.

The Clifty Creek plant is located in Madison, IN. It has six units capable of generating 217 megawatts each.

Located near Gallipolis, OH, the Kyger Creek plant has five 217-megawatt units.

Program Grows to Help More Seniors Live Independently

We've all seen the commercial. An elderly woman on the floor exclaims, "I've fallen and I can't get up."

Thanks to a \$1,200 People Fund grant, the Friendship Centers of Emmet County (FCEC) in Petoskey is helping local seniors summon help quickly and easily in such situations.

The grant paid for 10 Guardian 911 personal emergency response system (PERS) units for FCEC to loan free to qualified seniors. The 10 units were added to 14 the center has had since 2007. The advantage of the Guardian unit over other response systems is that it requires no monthly subscription, no service fees, and no contract. It works on any standard phone line with 911 service.

With the push of a button, the device connects its user directly to an emergency 911 operator without needing to be near a phone. Small and lightweight, it can be worn as a pendant, carried in a pocket, or clipped to a belt.

Sue Engel, the center's executive director, says the devices provide a sense of security and independence to a growing senior population that wants to remain in the comfort of their own homes as long as possible. Geriatric experts increasingly embrace that concept as best for seniors, due in part to familiarity with surroundings, proximity to family and friends, and privacy.

Social worker Kathy Bremmeyr, who determines applicants' eligibility for the program, explains that FCEC had a waiting list before the additional units arrived. All qualified seniors now have PERS units, with a few more still available. A senior who no longer needs the unit returns it to FCEC for loan to someone else.

Eligibility criteria includes income level, whether the senior lives alone, and what type of support exists from family and friends. Applicants must have a physician's recommendation for the unit, as well.

The screening process Bremmeyr uses to determine eligibility for the PERS units gives her additional information about seniors that indicates what other services that FCEC offers could help them. She also shares infor-

Kathy Bremmeyr (left) shows an Emmet County resident how to use the Guardian 911 unit that allows users to quickly and easily summon help in an emergency. Eligible senior citizens in the county can borrow a unit for free.

mation about who receives the devices with the local Emergency Medical Services organization to alert them to recipients' locations.

"Everybody has a parent or grandparent who will eventually need a device like this," Bremmeyr says. "It's pretty essential."

She cites the case of one senior who falls occasionally and needs help getting up. Using her Guardian unit, she can quickly summon local police who are familiar with her situa-

tion and rush to her residence.

"It absolutely saved my life," says another woman living alone who used the Guardian 911 unit when she fell.

"We are gratified that members of Great Lakes Energy care enough to contribute to the People Fund and make possible grants like this which allow us to provide seniors in our area with services that help them so much," Engel says.

Power In Numbers If every Great Lakes Energy member who participates in the People Fund got just one other person to join, it would easily double the amount of money available to help local food pantries, senior citizen centers, youth programs, and more.

The People Fund program works because there is power in numbers. A Great Lakes Energy member's average contribution of 50 cents a month or \$6 per year isn't much, but it adds up fast when thousands of members get involved.

Get involved and help the People Fund expand to meet the growing needs of Michigan residents, young and old. It all starts with asking just one person to contact us and we'll do the rest. You can also enroll online by visiting the "Your Community" section on gtlakes.com. Members who are enrolled have two chances each year to win a \$100 billing credit. *Enroll today!*

Surviving the Winter Season

Extrême cold temperatures and ice and snow storms make staying warm and safe a challenge. Here is how to create a winter survival kit for your home to help you and your family survive the cold grasp of winter.

The Essentials

Food: Food that requires no cooking or refrigeration such as bread, crackers, cereal, canned foods, and dried fruits. Remember baby food and formula if you have young children.

Water: In case water pipes freeze or rupture, keep a supply of tap water or purchase bottled water. The recommended amount of water to keep is 5 gallons per person.

Medicines: Roads may be inaccessible for several days due to a winter storm. Make sure to order in advance or refill any prescriptions that family members may need.

Identification: Make sure to keep forms of

EVERYTHING YOU WANTED – To know about firewood. coxx.com

NEW, DRIVE-THRU FIREWOOD STORE – In your truck in 5 minutes. More information at coxx.com

REAL ESTATE

GRAYLING ADULT FOSTER CARE – Home for sale. Six private rooms. 231-649-6842.

100 ACRES – One mile south, 3 miles west of Hesperia, MI. Farm land, gravel and woods. Enough gravel to pay 10 times what it’s worth. House, barn and 4 outbuilds, underground shelter, \$300,000. 956-412-9757.

LAKE ISABELLA, LAKE VIEW – From large deck and double sliders on 3 levels. Dock privileges, 3 huge bedrooms, 2 baths, open living area, walkout basement. 1/2 acre with trees, landscaping, geothermal, garage. Older home with many updates. \$150,000. 989-644-3373.

REACH OVER 270,000+ HOUSEHOLDS! See *Country Lines* classified ad information on next page, or place your ad online at countrylines.com

identification handy, such as social security card, passport, photo ID, and driver’s license. In addition, make sure to have bank account information and insurance policies.

Emergency Materials

- ▲ Alternate methods to heat your home:
 - Dry firewood for a fireplace or wood stove
 - Kerosene for a kerosene heater
 - Furnace fuel (coal, propane, or oil)
 - Electric space heater with automatic shut-off switch and non-glowing elements
- ▲ Blankets
- ▲ Matches
- ▲ First Aid Kit and instruction manual
- ▲ Multipurpose, dry-chemical fire extinguisher
- ▲ Flashlight
- ▲ Battery-powered radio, clock/watch
- ▲ Extra batteries
- ▲ Shovel
- ▲ Rock salt
- ▲ Non-electric can opener

When creating a winter survival kit for your home, take into consideration factors that are specific to your home and family. For instance, if your home is isolated or on the outskirts of a residential area, making it more difficult for help to reach you, make sure to stock additional amounts of food, water and medicine. Listening to weather forecasts regularly can provide you with several days notice to allow you to check emergency materials and stock up on essential supplies.

VACATIONS

TURKEY HUNTERS AND FISHERMEN – Log cabin and 192 acres on semi-private lake for rent, \$600/week. Excellent bass, pike, perch and bullhead fishing, also good turkey hunting in the area. Cabin sleeps 6, full kitchen, electricity and satellite TV. For more information call 989-620-5831 or email gpietsch2010@gmail.com

KIAWAH ISLAND CONDO – Near Charleston, 170 yards to beach. 2 bikes, miles of bike paths, beautiful area. Winter rate \$550/week, \$975/month. Call 989-725-7794 or email fredherring57@yahoo.com

RENTAL ON LAKE HURON – Near De Tour Village. 3-bedroom, 1½-bath house available weekly May thru Oct., \$700. \$600 if booked by April 15th. Four people, nonsmoking, no pets. Call 906-235-1652.

WANTED

More Local Discounts!

Nearly 30 new businesses have been added to the Co-op Connections™ program, which gives Great Lakes Energy members more chances to save with their Co-op Connections discount card.

Simply present your card at any of the nearly 275 local participating businesses to receive your discount. The card is a free benefit for all Great Lakes Energy members. Plus, save more with many national retailers who participate in the program.

New local businesses on the Co-op Connections program and their discount offers are listed below. See all local and national discount offers by visiting gtlakes.com and clicking on “Co-op Connections.” Call us to request a list if you don’t have internet access.

How to Save

Present your card at local, participating businesses in Great Lake Energy’s service area.

Save on prescription drugs at participating pharmacies. Visit locateproviders.com for a list of participating pharmacies near you.

Present your card at a participating business in another electric cooperative’s service area—this includes the Cherryland Electric service area in Traverse City and co-ops in other states nationwide.

Use your card at national chains to receive a discount. Many national offers require a promotion code that can be acquired by visiting gtlakes.com or by contacting our office to request a list of national providers.

Need a Card or List of Discounts?

Cards are free to members. Simply email glenergy@glenergy.com, or call 888-485-2537, ext. 8957, to request yours today.

Business Participation

We also welcome additional business participation, and best of all, it’s free. Please call 888-485-2537, ext. 1305, for more information on enrolling your business.

New Local Businesses on the Co-op Connections Program

■ **Antrim 131 RV Campground, Mancelona.** Half-off the first night, 10 percent off each additional night.

■ **Atwood Hardware & Building Center, Ellsworth.** 10 percent discount with any major form of payment (cash, check, credit card).

■ **Chris’s Country Dollar, Reed City.** Free \$1 item extra with \$10 purchase.

■ **Bay Tennis & Fitness, Harbor Springs.** 10 percent off memberships or group fitness punch cards.

■ **Big Bear Trading Post, Johannesburg.** Free large breadstick with large pizza purchase.

■ **Blue Pelican Inn, Central Lake.** 10 percent off bill if seated by 6 p.m. in the dining room only. Some exclusions apply.

■ **Cheboygan Bowling Center.** Free shoe rental with paid bowling during open play only.

■ **Comfort Inn of Hart.** Show membership card at check-in and receive 10 percent discount. Not valid with other discounts or coupons.

■ **Claybanks Pottery, New Era.** 10 percent off everything.

■ **Drifters Guide Service, Reed City.** \$20 off half-day or \$50 off full-day trips.

■ **Golden Inn Café, Mears.** 10 percent off Thursday breakfast or lunch, excluding daily specials.

■ **Hal’s Masonry, Grayling.** 5 percent discount on jobs contract totaling \$1,500 or more.

■ **Harrington Inn, Fremont.** Minimum 10 percent discount.

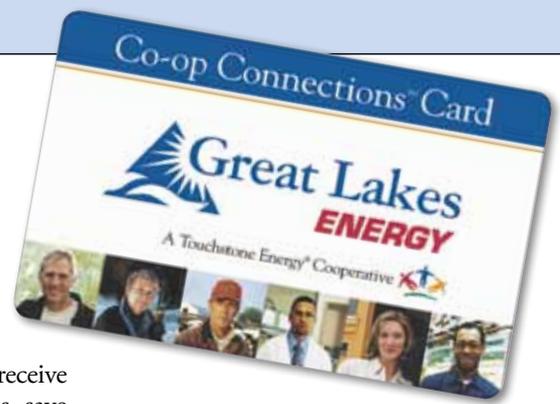

■ **Kazz Bar & Grill, Casnovia.** Dine-in only offer includes free order and refills of homemade tortilla chips and spices with food or drink order over \$10.

■ **Manistee Lake Resort Condos, Kalkaska.** 10 percent discount on two or more night stay (rental).

■ **Musik Haus, Gaylord.** 10 percent off non-sale merchandise. Some exclusions apply.

■ **Mobile Wrench, Wayland.** \$25 off first visit.

■ **Morat’s Bake Shop, Mears.** 10 percent off total purchase on Thursdays.

Prescriptions, Too

Since 2007, Great Lakes Energy members have saved over \$204,000 on prescriptions using their Co-op Connections discount card.

The pharmacy prescription drug benefit is not insurance; rather, it provides immediate discounts at participating pharmacies. When GLE members present their Co-op Connections card to purchase their prescriptions, they pay the discounted price, the insurance provider’s price or the pharmacy’s regular retail price, whichever is lower.

A list of participating pharmacies is available at locateproviders.com or by calling 800-800-7616.

For details on the Co-op Connections program visit gtlakes.com or contact Great Lakes Energy at 888-485-2537.

■ **Now Hair Designs, Newaygo.** \$2 off adult hair cut, \$5 off chemical service. Not valid with other discounts.

■ **New Horizon Landscape, Gaylord.** Free initial site review and consultation.

■ **Quiet Time Massage, Whitehall.** \$5 off full body Swedish massage.

■ **Quiznos Subs, Petoskey.** 10 percent discount. Some exclusions apply.

■ **Silver Lake Pit Stop Gas ‘N Go, Mears.** Buy large pizza at regular price and get second one-topping large pizza at half price.

■ **Smoke 2000, Wyoming.** Receive a 10 percent discount.

■ **West Michigan Sand Dragway, Jackson.** One free spectator admission with one paid admission.

■ **True North Golf Course, Harbor Springs.** \$10 discount on golf.

■ **Yankee Springs Golf Course, Wayland.** 2-for-1 green fees. Other conditions apply.

Add Heating Comfort and Save

Dorothy O'Brien, a Great Lakes Energy member in Ludington, warms her house and lowers her heating bills with the help of a Convectair® electric heater.

She spotted a Convectair at GLE's display booth during the Ludington Home and Garden Show two years ago and ordered one through Hart's GLE office. O'Brien has used the unit nearly every day during the past two winters.

"Yes, the light bill goes up when I use it," she says. "But if I didn't use it, my fuel oil bill would be higher yet."

O'Brien keeps the unit in the kitchen of her older country home. She finds that

a wall outlet. A built-in electronic thermostat controls how often they operate, which helps save energy. Heat can be adjusted to any comfort level.

Convectairs offer three main advantages: **Even heat.** Convectairs heat through convection by drawing in cool air from the floor and reheating it, then diffusing the heat gently through grilles at the top of the unit. The heat spreads evenly throughout every part of the room, resulting in more comfort.

Quiet and cost-effective. Since the unit requires no motor or fan, it runs silently. Also, the convection method of heating results in efficient operation, reducing heating costs.

Safe and easy installation. Units mount easily on walls with brackets provided. Wall mounting keeps the units safely out of the way. They do not become hot enough to cause burns when touched. An auto-reset safety device turns the unit off if it should ever get too hot.

Make your home more comfortable this winter. Follow the example of these two GLE members and call Great Lakes Energy today about purchasing your Convectair electric heater. Contact GLE's marketing department at 888-485-2537, ext. 8957, to get information and special pricing for GLE members, or visit gtlakes.com and see "Products & Services" information under "Your Home." Units are on display at any GLE office.

Donna Wheeler says the units help lower her propane home heating costs.

leaving the unit set on low keeps the room comfortably warm.

O'Brien likes her Convectair so much that she talked her next door neighbor and daughter, Donna Wheeler, into buying one. Her daughter now owns two Convectairs and keeps one upstairs and one downstairs. Wheeler, who is also a GLE member, says the units help lower her propane home heating costs.

The 120-volt models can be plugged into

Lower Your Electric Heating Costs

Two rates are available to qualifying Great Lakes Energy members that will reduce your electric heating costs.

These lower rates are possible because of the money saved by controlling your electric heat during peak demand times.

The rates are:

Controlled Heating Rate (CH) 3 cents per kWh discount.

A backup heating system that generates heat from an energy source other than electricity is required. Examples include gas and oil furnaces, wood stoves and fireplaces. Generators do not qualify as a backup heating system.

Your system will be controlled up to 400 hours per year with the longest interruption not to exceed eight hours in any 24-hour period.

Partial Controlled Heating Rate (PCH) 1.5 cents per kWh discount.

No backup heating system is required.

Your system will be controlled up to 400 hours per year with the longest interruption not to exceed 40 minutes per hour for up to a total of six hours or nine times per day.

Both rates require installation of control equipment and a second meter for recording only your electric heat use. Electric heat must be the primary heating system in your house, such as electric baseboard systems and heat pumps. Plug-in heaters do not qualify.

For more details, see the "Load Management & Rebate Programs" section of our website, gtlakes.com, under "Your Home." You can also call 888-485-2537, ext. 8957.

Affordable Heating Solutions

Let us eliminate: ❌ Chilly bathrooms
❌ Cold rooms and floors ❌ Noisy heaters

Plug-in and hard-wired units available only from your co-op.

Choose Convectair® heaters for your home!

Discover North America's most innovative line of electric space heaters. Convectair heaters use convection to evenly and silently distribute heat into your rooms.

Dog Days of Winter

For the first time in my life, I have a dog. Or, maybe, a dog has me. I'm not quite sure yet how this relationship works.

But I do know we aren't a couple yet. I'm applying for a dog with the Animal Placement Bureau, a nonprofit organization whose primary goal is to place homeless dogs into loving, lifelong homes. The volunteer foster care network has no paid staff and no sheltering facility. The dogs in their care live with volunteers and become as much a part of their family as their own dogs.

I know this dog very well. Bandit is a 57-pound Australian Shepherd, rescued last spring from a breeder's kennels, after the awful economy left the kennel with more dogs than it could sell or adequately care for.

A mature 5-year-old, he's calm and protective, not given to barking, timid around strangers, and has a tender gaze. Typical of his breed, he is a one-person dog. He will run you over on his way outside. His joy at romping in snow is unmatched. Actually, it's more like a dance in which he whirls and twists in mid-air and then falls spread-eagle in the snow, in which he buries his nose and comes up with a mouthful of white water.

He was 'left' to me by Mike Peters, with whom I worked at the Michigan Electric Cooperative Association, and who is moving to Madison, WI, to run WPPI Energy, a regional power company serving 51 customer-owned electric utilities. Because the circumstances of his travel and living arrangements won't give him the time to tend to a dog, he was faced with giving Bandit back to the Placement Bureau or giving someone he knows a chance to adopt him in his stead.

So, here I am, filling out adoption papers for a dog. Here's a sample of the questions:

What do you like about the dog you're interested in adopting?

"He is gentle, yet spirited; intelligent and

playful. He smiles."

What will your first day with your new dog be like?

"We've already had a first day. He found his way around the house, located his food dish and water, explored the yard, and warmed up to my petting. It took a couple of days for him to get comfortable."

What are your feelings about dog obedience training?

"I'm all for it if it will help improve our relationship and help him adjust to life with us."

What are your feelings about cosmetic surgery for dogs (i.e. cropped ears, docked tails)?

"Don't like it."

There are questions about grooming, vaccinations and vet check-ups, leaving the dog home alone, sleeping arrangements, crating (which is the practice of confining the dog in a crate that he has been conditioned to enjoy, a place where he can feel safe and secure), and our preferred brand of pet food.

This may seem like a lot of work to

get a dog. But to their great credit, the Placement Bureau and its volunteers have a lot invested in each dog they rescue. They want to ensure their rescue animals are placed in an environment where they can thrive. They do good and necessary work, and it's worth our effort.

Jim Hough, whose columns graced this page for 25 years, told me a dog column could never go wrong. I believe him because they always generated a ton of mail.

Learn more about the Animal Placement Bureau at apbpets.com or by calling 517-346-4505.

Mike Buda, editor emeritus of Country Lines, enjoys the pure glee in Bandit's greetings. Email Mike at mbuda@countrylines.com or comment on his columns at countrylines.com/column/ramblings/

Costa Rica Natural Paradise 10 Days \$995

Available at Caravan.com

Caravan makes it so easy - and so affordable - for you to explore the magnificent rainforests, beaches and volcanoes of Costa Rica. Your Caravan Costa Rica tour includes a great itinerary as well as all meals, all activities, all hotels, all airport transfers, all transportation and excursions within Costa Rica.

A professional tour guide accompanies you for the entire tour. With naturalist guides, see exotic birds and wildlife, hike in jungle rainforests, view volcanoes, soak in hot springs and cruise through biological reserves.

Join the smart shoppers and experienced travelers who rely on Caravan to handle all the details while you and your family enjoy a well-earned, worry-free vacation in Costa Rica.

“The distinguished Caravan Tours has scheduled virtually daily departures throughout January, February and March for its escorted 10-day tour. And what a tour it is: Usually, travelers have to choose from among Costa Rica’s beaches, volcanoes and rain forests. This tour goes to all those places and includes every major sight, as well as three meals a day on all but two days, and excellent hotels and lodges.”

— Arthur Frommer’s Budget Travel

“As Panama’s largest tour operator, Caravan keeps costs under control - consistent with its long-time reputation for value.”

— Audubon Magazine

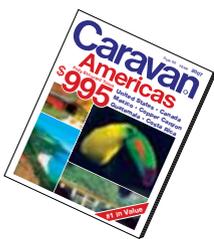

“Caravan is ... very reasonably priced”

— New York Times

All tours between \$995 - \$1295, plus tax and fees.

Available now at Caravan.com

- 9 days Canadian Rockies and Glacier Park
- 10 days Nova Scotia and Prince Edward Island
- 8 days Grand Canyon, Lake Powell Bryce, Zion
- 8 days Mount Rushmore, Yellowstone and Grand Tetons
- 8 days California Coast and Yosemite Park
- 8 days New England Fall Colors
