# A WATERFURNACE GEOTHERMAL UNIT IS LIKE TAKING TWO CARS OFF THE ROAD

(Sorry, you can't pick *which* two...)

**Jeff Gordon's office is a bit more extreme than most. It's hot. It's loud. You don't want to know what he spends on gas. So when Jeff gets home, he wants to be comfortable without spending a fortune on fuel. That's why when it was time to decide how to condition his house, Jeff chose a WaterFurnace geothermal heat pump. A WaterFurnace geothermal system uses the clean, renewable energy stored in your backyard to save up to 70% on heating, cooling and hot water. It's the environmental equivalent to planting an acre of trees or taking two cars off the road. It's good for the environment, it's great for your budget and thanks to a 30% federal tax credit, now is the best time to act. For more information, contact your local WaterFurnace dealer today.**

Your Touchstone Energy® Cooperative

# Big Storm Doesn't Stop Us

The March 2012 snowstorm that knocked down trees and power lines at hundreds of locations left over 60,000 Great Lakes Energy (GLE) members without power throughout our service area, many for several days. Some GLE employees call it the most damaging snowstorm they've seen in 30 years.

Like the October 2010 wind-storm, Mother Nature's fury brought destruction throughout our service area. Instead of howling winds up to nearly 80 mph, this storm stole quietly into the night. This type of event is rare because many inches of snow fell in a short time and it was wet, heavy snow that clung to trees, poles and power lines.

Most of northern lower Michigan had at least a foot of snow on the ground, which made restoration work extremely difficult. Line repairs proceeded at a snail's pace for Great Lakes Energy, as well as neighboring electric utilities.

Getting to outage locations took more time with this storm. Unlike the fall wind-storm, the thick, heavy blanket of snow made travel difficult and slow. Roads were sometimes blocked by trees. Big line trucks got stuck in the snow. Snowshoes, special tracked vehicles and snowmobiles were needed to get to many trouble spots, and even those sank into the snow.

Repairs also took more time, as line-workers reported up to waist-deep snow in some places. They had to remove fallen trees and limbs before they could begin to dig out power lines buried in the snow. In some cases, snow frozen to the downed wire had to be knocked off before hoisting it back up into place. Over 50 broken poles had to be replaced, sometimes using tracked vehicles to haul them to the site. Most of this hard, time-consuming work had to be repeated over and over again at each location with downed wires.

We had a small army of private contractors and other utilities in the state helping us, totaling 50 line and tree-trimming crews. Most of the GLE crews who finished getting members back on in our

**Steve Boeckman**  
Great Lakes Energy  
President/CEO

central and south regions headed north to help out, too. Crews worked long hours, only stopping when necessary and missing much time away from their own homes and families.

You can take pride in your GLE employees who look out for you. In addition to our lineworkers, our office staff was involved in getting your power back on. They include dispatchers providing valuable communication to repair crews, all available member service reps answering the phones, and other staff who patrolled our lines looking for downed wires or helped lead visiting crews to problem areas.

It was a bad storm, but it could have been worse. In recent years we've concentrated on strengthening our core business, which is to provide you with the most reliable service possible. We've been aggressive in re-clearing trees within power line rights-of-way. New technologies are helping us reduce outage times. New lines are being built closer to roadways when possible, which makes them more easily accessible when repairs are needed. Your cooperation in allowing us to continue this progress means better service for you.

If there is a "good side" to a storm, it's the fact that we witnessed more people using the "Storm Central" and "Account Access" services on our website. "Storm Central" displays current information on how many members are without power, and where. From there, members can access their account to check on the status of the outage at their location, such as informing them when a crew has been assigned to their region. Members without power are finding ways to access this information, either at work, at a library, or with a smart phone.

Most importantly, everyone who worked the storm, including visiting crews, did their jobs safely. We appreciated your patience and words of support throughout this effort. We can't control what Mother Nature brings, but we are dedicated to looking out for you in any kind of weather.

**Important  
Safety Message!**

# Connect Your New Generator Safely

Dave Matz, Great Lakes Energy's operations director, points out the safety transfer switch that allows a portable generator to be safely connected to a home.

**G**reat Lakes Energy reminds members with new portable generators that they need to be safely installed to avoid hazards that could result in a fatality and property damage.

A meter base designed for safely connecting a portable generator to your home in an emergency can be purchased for \$350 from Great Lakes Energy.

The investment protects co-op members and lineworkers from potential dangers. An improperly connected portable generator can back-feed power into the power line and potentially electrocute both lineworkers trying to restore your service and neighbors served by the same transformer. Your generator, wiring and appliances could also be damaged when power is restored.

The electric meter fits into the special base, which has a utility/generator transfer switch for safe operation of your portable generator. The switch prevents both sources from feeding power into the home at the same time and creating a dangerous situation. It also prevents electricity from back-feeding into the power line.

Installation of the meter base and generator wiring should be done by a licensed electrician. A professional can help size a portable generator to safely meet your emergency needs and will ensure the work is done correctly.

The meter base is rated for a 200-amp service with a 100-amp maximum for the generator input. The top of the meter base is locked and the bottom area is left accessible for wiring in the portable generator.

Instruct your electrician to install the necessary equipment that will enable you to safely and quickly connect and disconnect the portable generator during an emergency.

For more details, contact us at 888-485-2537, ext. 1303.

## Board Nominating Petitions Available

**N**ominating petitions are available for Great Lakes Energy members who would like to seek election to the cooperative's board of directors.

Four board positions, all for three years, will need to be filled. The terms of directors Paul Byl of Shelby, Mark Carson of Boyne City, Dale Farrier of Kalkaska, and Robert Kran of Free Soil expire this year.

Members will receive their mail-in ballots in the July/August 2012 issue of *Michigan Country Lines*. Winners will be announced Aug. 22 at the GLE annual business meeting.

To get their names on the ballot, qualifying member-owners of the cooperative who maintain a primary residence within our service area must file a nominating

***More information on this year's director election, including the mail-in ballot, will appear in the July/August 2012 issue of Michigan Country Lines.***

petition with the co-op secretary.

Petitions must be signed by at least 50 active GLE members. Co-signers of a joint membership count as one signature. For the signature to be valid, complete information about the member must be provided. The cooperative will verify the member information. Incomplete petitions will not be counted. All petitions must be

signed no more than 90 days prior to submission to the cooperative.

Petition circulators are advised, but not required, to collect well over 50 signatures because some may not be valid.

Signed petitions returned by mail or in person must be received in the co-op's Boyne City office no earlier than Thursday, May 24, 2012, and no later than Friday, June 8, 2012.

Petitions can be mailed to: Secretary of the Cooperative, Great Lakes Energy, P.O. Box 70, Boyne City, MI 49712. They can also be dropped off at the Boyne City office during normal business hours, from 8 a.m. to 5 p.m., Monday through Friday.

Petition forms are available by contacting 888-485-2537, ext. 1331.

## Letters

Praise and advice regarding the recent storm, more on apples and hospital costs, CFLs, and guidelines for tree-planting. It's all here in your reader letters.

Photo - John Russell, Great Lakes Images

*"Thanks to all of the line crews who worked on getting power restored to customers."*

— George Granlund

### Storms & Power Lines

In light of the recent snow we had here in Leelanau County, I would like to make a suggestion regarding the power lines. We could take a more proactive approach to the emergency that arises by burying the power lines. I heard this is very expensive, but if put in perspective of the cost of restoring power to business and homes, not to mention the loss of commerce, and personal inconvenience, I wonder just how much more expensive this process of burying the lines would be.

— Anneke Wegman-Plamondon,  
Lake Leelanau

**Editor's Note:** It costs about three times as much to install underground cable. This equates to tens of thousands of dollars more per mile-of-line. Further, the life span of underground cable is shorter than overhead, and it is much more time-consuming and costly to locate and fix underground outages.

Each time they upgrade a section of line, electric co-ops evaluate the cost/benefit of underground lines and review outage history over a period of years. Because they are member-owned and nonprofit, co-ops constantly balance their

responsibility to keep the lights on with maintaining affordable rates.

### Thanks To Storm Crews

Thanks to all of the line crews who worked on getting power restored to customers. We went 42 hours without power, but survived. [I have some] suggestions for *Country Lines* articles:

- An hour-by-hour narrative of how Cherryland handled the storm.
- A description of how to use a generator to power a furnace or other appliances in an emergency. Both good and bad practices.
- What to do in an emergency, such as preserving food, keeping warm safely, etc.

The storm can be a real learning experience. Again, thanks to the crews for the hard work.

— George Granlund

**Editor's Note:** There's a storm story on pages 12-13, and electrical safety stories are scheduled for all issues (always p. 25).

Safety information on using generators and around downed power lines appeared in March (also on [countrylines.com](http://countrylines.com)), and the May issue will feature storm safety. Thanks for asking about these important topics.

### An Apple A Day

Enjoyed reading the "An Apple a Day" story in the February issue of *Country Lines*.

We have one such Yellow Transparent apple tree on our farm in Garden (Upper Peninsula). Mike Buda suggests that, "If you have a tree, treasure it." The tree is about 100 years old and is starting to "deteriorate" with old age. About five years ago, my neighbor and I decided to keep the tree living as long as possible. Every fall, we give it some necessary maintenance. We currently have a cable wrapped around the trunk to keep it from splitting any further. Mike is correct about the deliciousness of the fruit from this tree. My mother made great pies and sauce with the apples from this tree over 60 years ago. The threshing crew and family loved her delicious homemade apple pies.

— Steve and Roseanne Psodna, Garden and Lansing

### Who's Paying Hospital Costs?

Let me offer a possible answer to Mike Buda's January "Ramblings" column, where he wonders who is paying the costs for his hospital roommate, Roger. Most likely, everybody who pays health insurance premiums or out-of-pocket for medical services shares the expense of Roger's health care. This is one of the reasons why medical care and health insurance premiums cost so much. If Roger's on disability, then taxpayers pay.

Any society has to decide whether they treat their fellow citizens or let them die. While some in our country would choose the latter (as shown in

recent debates), most of us living in a civilized society choose to treat people in need of care. As it should be.

If you choose to drive, you are required to be insured. You can choose not to drive. You can't, no matter how healthy or careful you are, choose not to get sick or injured. That's why the Individual Mandate (requires that everyone be insured) part of the new health care law is crucial to making this law work.

Until now, the burden of paying healthcare costs for the "Rogers" among us was left to the insured (through higher rates), or to taxpayers when the "Rogers" go on disability. In 2014, when the Affordable Care Act kicks in, everyone will be covered, and everyone will pay into the system. The burden for caring for "Roger" will be shared by many rather than few, if we are going to continue our moral tradition of treating our neighbors instead of letting them die. Then Mr. Buda won't have to wonder, because Roger will be insured.

— Jeff Lange, Alanson

### Geothermal Heating/Cooling Contractor?

I need help finding a contractor for my house in Rosscomon, MI.

— Kevin Forrest

**Editor's Note:** Visit the Michigan Geothermal Energy Association's website at [earthcomfort.com](http://earthcomfort.com) for contractor and other information, or email [info@earthcomfort.com](mailto:info@earthcomfort.com).

### Burned About CFLs

I want to tell you I resent being told what kind of lightbulbs to use (CFLs). It takes them much longer to come on, and I am used

### Energy Efficiency Tip of the Month

Use motion sensors on your lights to save on your electric bill. These sensors turn on lights automatically when someone enters a room and turns them off after a person leaves.

Source: U.S. Department of Energy

to flipping the switch and having light. Not so with these new bulbs. For me, it will be more costly as they do not give enough light for me to see, and I'll have to use more of them. You claim it will save 25 percent energy, but on the other hand, if I have to use two instead of one, how is that saving energy? Where I use a 75-watt now I have to go to 100-watt in the new bulbs. That is not saving anything. They are also harder to dispose of. Maybe that is what they want them to do is use more. Everyone I talk to says the same thing. In fact, I know people buying up the regular lightbulbs by the case hoping to have enough to last their lifetime. I paid almost \$10 for a 3-way one and it doesn't fit any table lamp I have with the shade on, and I can't afford to buy new lamps. I took the shade off to make room for the bulb and used it, and it lacks a lot of being anywhere near as good as the old 3-way bulbs. Try doing hand work at night with those new bulbs, and you just can't see. Yes, I have had my eyes checked. My son and his family have had two of them start smoking between the base and the spiral. No, it did not burn out, but it is not safe and they will not use them. What's next? Have we no freedoms?

—Dorothy Hemenway, Decatur

**Art Thayer Responds:** (Energy Efficiency Programs Director, Michigan Electric Cooperative Association)

Thank you for your letter concerning frustration with CFLs. Although you are using a 100-watt CFL equivalent bulb to replace a 75-watt incandescent bulb, you are still saving energy because the 100-watt equivalent CFL only consumes 23 watts, reducing your energy consumption by over 50 watts every time you use the bulb. As with any appliance, there are vast differences in quality and performance between brands. Consumer Reports ([consumerreports.org](http://consumerreports.org)) has tested and rated

several CFL brands and this is a good source for finding the best-performing bulb. If your electric co-op has an energy advisor they may also be able to point you in the right direction for proper bulb replacement and the best brand. Yet, even the best CFL brand may not be the best fit for your particular use. The federal government is rethinking the requirement to phase out incandescent bulbs and has pushed the effective date of the 100-watt phase out from January 2012 to October 2012. The new incandescent bulbs are more efficient than older incandescent bulbs. Slight smoking and discoloration (brown or black, over time) at the base of the CFL bulb is normal.

### Nuclear Opinions

The water flowing through the Saint Clair and Detroit Rivers at each end of Lake Saint Clair has perhaps more energy than three or four nuclear power plants could produce if a reasonable plan to harvest this otherwise wasted energy could be formulated with perhaps the cooperation of Canada or mirror facilities on each side of the border.

—David Shepard

### Don't Plant Near Power Lines

The weather is warming and gardeners are getting ready. Please consider an article on planting trees, shrubs, grasses, forbs and rain gardens under electric and power lines. Not only homeowners plant under lines ... I've seen landscapers do the same! In ten years, when the trees are just starting to look good, they'll have to be cut down.

Thank you.

—Beth Clemensen

**Editor's Note:** The Arbor Day Foundation site at [arborday.org](http://arborday.org) has information on "Choosing the Right Tree" that offers planting guidelines, suggests species for different landscape areas, and offers free trees for joining. We've also planned a safety-related story for May.

## HomeWorks Youth Serves On National Council

Tyler Orlando, a junior at Chippewa Hills High School in Remus and a HomeWorks Tri-County Electric Co-op member, recently returned from the National Rural Electric Cooperative Association (NRECA) Annual Meeting in San Diego, as part of his year-long service on the NRECA Youth Leadership Council (YLC).

Tyler Orlando

Orlando represented Michigan on the YLC, a leadership group composed of 42 students nationwide. YLC members play an important role at the meeting by assisting at the Congressional Action Center, encouraging members to contact their U.S. senators and representatives on key co-op issues, including protecting consumers and keeping electric bills affordable. The group also kicked off the huge event, which showcased a procession of YLC members carrying their state's flag to open the first general session.

"It was really cool to be part of NRECA's Annual Meeting," Orlando said. "I learned so much about the energy industry and how public policy affects it. And I met people from all across the country. It was an amazing experience."

Orlando was elected by his peers to serve on the Youth Leadership Council during the Rural Electric Cooperative Youth Tour. The Youth Tour meets in Washington, D.C., every June, where over 1,500 students representing electric co-ops from across the country meet their Congressional representatives, learn about national co-op issues and visit historic landmarks. YLC delegates also attend a summer Leadership Conference in Washington. A national YLC spokesperson is selected during this conference.

Visit [YouthTour.coop](http://YouthTour.coop) to see photos and videos and learn more about these electric co-op-sponsored programs.

### Why Does the Type of Power We Provide Matter?

Up to 75 percent of every dollar you pay your local electric cooperative goes directly for wholesale power costs. Bucket trucks, poles and wire, right-of-way trimming, payroll, and other operating expenses are covered by the rest.

Source: National Rural Electric Cooperative Association

# Maintaining High Standards

**G**reat Lakes Energy met all 10 state-mandated standards for electric service and reliability in 2011, which is the fifth straight year for this accomplishment.

"Meeting the standards is important because the people we serve are more than just customers; they're members who expect the very best from their cooperative," says GLE President/CEO Steve Boeckman.

The Michigan Public Service Commission (MPSC) requires state-regulated electric utilities to annually report how well they were able to meet standards established to protect consumers from unacceptable levels of electric service and reliability. Standards to help measure utility performance in emergency outage situations are included.

## Standards and 2011 Results

**1. Complaint Response.** Utility must respond in three business days or less to at least 90 percent of any formal complaints filed against it with the MPSC.

GLE score: 97 percent ✓

**2. Call Blockage.** No more than 5 percent of incoming calls should receive a busy signal.

GLE score: 0.01 percent ✓

**3. Meter Reading.** At least 85 percent of the meters must be read within the approved time period.

GLE score: 99.09 percent ✓

**4. Wire Down Relief Factor.** At least 90 percent of the time, a utility must respond within four hours to nonutility employees, such as firefighters, who request relief from guarding a downed power line.

GLE score: 100 percent ✓

**5. New Service Installation.** At least 90 percent of new services must be installed in

Great Lakes Energy crews rebuild a power line knocked down by trees during a summer storm last year.

15 business days or less. Great Lakes Energy handled 481 new service installations last year, excluding those installed in combination with primary lines.

GLE score: 98.5 percent ✓

**6. Average Call Answer Time.** Calls must be answered on average in less than 90 seconds. In 2011, the cooperative handled 355,000 calls through its Call Center, outage and operator queues.

GLE score: 32 seconds ✓

**7. Outage Restoration (normal conditions).** At least 90 percent of the customers should have their power restored in eight hours or less.

GLE score: 97.9 percent ✓

**8. Outage Restoration (catastrophic conditions).** At least 90 percent of the customers should have their power restored in 60 hours or less.

GLE score: 100 percent ✓

State rules define catastrophic conditions as either severe weather conditions that result in service interruptions to at least 10 percent of a utility's customers or events of sufficient magnitude that result in a government issued state of emergency declaration.

**9. Outage Restoration (all conditions).** Power should be restored to at least 90 percent of the customers in 36 hours or less under normal and catastrophic conditions.

GLE score: 100 percent ✓

**10. Same Circuit Repetitive Interruption.** No more than 5 percent of the utility's electric circuits should experience five or more outages in a 12-month period.

GLE score: 0.046 percent ✓

Reliability improvements in the last seven years have benefitted thousands of members and contributed to Great Lakes Energy's success in meeting state performance standards. They include more intensive work to keep trees away from power lines; upgrading miles of older, less dependable lines and employing new technologies to find and correct line problems more quickly and effectively. These and other improvements also enable Great Lakes Energy to restore power more quickly when severe weather conditions cause massive, widespread damage to its distribution system.

However, the co-op's work is not done yet, as it will take time to extend that same high level of reliable service to all members.

## Visit Us at the Home Shows

At the Great Lakes Energy booth you will find:

questions  
answered!*

## Attend Our Free Energy Seminar

You're invited to attend a free energy seminar Saturday, April 21, from 10 a.m. to noon at our Great Lakes Energy office in Newaygo.

**Space is limited, so please register by calling 1-888-485-2537, ext. 8958, or email [events@glenergy.com](mailto:events@glenergy.com).**

Hear presentations on geo-thermal and air-source heat pumps, Marathon® electric water heaters, and more. Local heating and cooling companies and Great Lakes Energy staff members will be on hand to answer your questions relating to electric heat and electric water heaters.

Receive the latest update on Energy Optimization (EO) programs that offer incentives to help you save energy. Learn about other incentive programs offered by Great Lakes Energy, such as special billing discounts for electric heat and water heating.

Door prizes will be awarded. Winners will receive energy-saving gifts.

## Coloring Contest: Still Time To Enter!

**HEY KIDS!** If you're 10 or under you can enter our coloring contest. This year's coloring page is a picture of the Touchstone Energy balloon. Great Lakes Energy is a Touchstone Energy Cooperative.

Download the entry form and contest rules at the "Your Community" section of [gtlakes.com](http://gtlakes.com). Entry forms can also be picked up at any GLE office. Entries must be received by **April 20**.

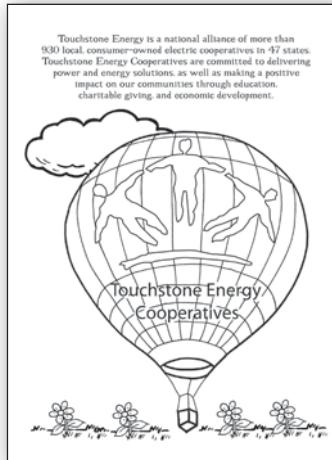

### Age Groups

- 4 and under • 5-7 years old • 8-10 years old

### Prizes

One grand prize for each age group: deluxe set of art supplies, valued at \$25. Plus, you will be pictured in one of our publications.

One second and one third prize for each age group: new crayons and markers, valued at \$10.

Download the entry form and coloring page at [gtlakes.com](http://gtlakes.com) or pick them up at one of our offices.

## New Paperless Bill Option

Paperless electric bills are now available with the new Electronic Bill Presentment (EBP) option. By eliminating paper bills for participating Great Lakes Energy members, EBP saves paper, reduces bill printing and mailing costs, and helps the environment.

Members can request to be notified by e-mail when their monthly billing statement is available to view online. Billing statements can be saved and stored by members on their own computers or they can access an online archive of up to 13 months of billing history through their GLE online eBusiness account.

Members—including those who currently use GLE's eBusiness feature for online information about their electric accounts—will see a page that encourages them to sign up for EBP when they log-in or click on the "Account Access" link on GLE's website. Once enrolled in EBP, they will receive a monthly email advising their bill is online and ready to view.

Unlike the bill summaries that appear on members' eBusiness accounts, EBP statements are exact replicas of the physical bill.

When members combine EBP with automated bill payment, GLE can realize a nearly paper-free circle of distributing bills and receiving payments.

Great Lakes Energy reps can walk members through the process of enrolling in EBP and automated bill payment, including viewing statements through eBusiness accounts. To enroll, visit [gtlakes.com](http://gtlakes.com) and click on "Account Log-in" at the top of the page, or call 888-485-2537.

## Receive Country Lines While You're Away

You can continue to receive your *Michigan Country Lines* magazine even if you're away from home for an extended time.

Simply contact us if you plan to be away for more than a month, and give us the address where you would like the magazine sent. Contact us again when you return home to ensure there will be no interruption in your magazine mailings.

Contact us by dialing 888-GT-LAKES (485-2537), ext. 1817, or by visiting the member services section of [gtlakes.com](http://gtlakes.com), found under "Your Home" and by clicking on "Change of Address."

Find us on Facebook.

# BATTLING THE STORM

By Nick Edson

The scene was a mess, and it blanketed most of northern lower Michigan and part of the eastern U.P. with 18-24 inches of wet, heavy snow.

Huge trees were knocked over, pulling down power lines and poles with them.

Two feet of snow blocked roads and driveways.

Over 104,752 homes and businesses were left out in the cold in the service areas of Cherryland, Great Lakes Energy (GLE), Presque Isle Electric & Gas (PIE&G), Cloverland, and Alger Delta cooperatives. The first three were the hardest-hit, but the count doesn't even include consumers affected in areas served by other utilities.

"We had our work cut out for us," said Cherryland line superintendent, Jim Carpenter, of the 20,000 outages in their area. "I've worked here 34 years and I've never seen the kind of destruction that we were facing."

Engineering manager Frank Siepker agrees.

"It wasn't just the amount of damage that was done," Siepker notes. "It was the fact that we had guys walking in waist-deep snow for miles at a time just to get back to where the line was down. We had many places where we couldn't send our line crews until our tree-trimming crews went in and cleared trees away from the road."

The storm hit late on Friday, March 2, and took more than a week of grueling work in fast-changing weather conditions to get everyone's power restored.

Not only were the co-op line crews working 16 hours at a stretch, but outside line, tree-trimming and equipment contracting crews came from all over Michigan and part of Indiana to help. Mutual aid teams, coordinated by safety professionals Joe McElroy and Dan King of the Michigan Electric Cooperative Association (MECA), came from seven other

A crew works to reconnect power lines with the help of a bucket truck. The deep snow and ice produced by this record storm slowed restoration progress, and many outage areas weren't accessible by vehicles, causing some lineworkers to crawl through snow drifts on their hands and knees to reach downed wires.

electric co-ops and nine cities.

About 50 additional crews were called in to assist with Great Lakes Energy restoration efforts alone. By the storm's end, Cherryland had 150 people working in addition to regular staff—the largest workforce ever deployed on their system, and Presque Isle required about 30 additional workers.

"It was a huge undertaking," explains Siepker. "But the bottom line was that we had members sitting in the cold. We couldn't let up until the last one had power."

As the crews struggled to work in harsh conditions, member service representatives were answering phones and updating the media, web pages, and Facebook and Twitter sites with the latest news about power restoration.

"Most of our members understood the monumental task we faced," said Cherryland General Manager Tony Anderson. "But a few became frustrated and voiced that to our employees. That comes along with the job. I'm very proud of the job our employees did handling this massive outage."

At Great Lakes Energy, the state's largest co-op, outages spread over 18 counties and affected over 60,000 of 125,000 members.

"Getting to outage locations took more time with this storm," says Great Lakes CEO Steven Boeckman. "Big line trucks got stuck in the snow. Snowshoes, special tracked vehicles and snowmobiles were needed to get to many trouble spots, and even those sank into the snow."

Rain followed the storm, causing snow to

The scene pictured here was unfortunately common as trees and limbs tore down lines in the storm's path.

**Below:** Lineworkers prepare to replace a pole that snapped in half under the pressure of heavy, wet snow.

freeze on some downed wires, and it had to be knocked-off before hoisting them back up into place. Over 50 broken poles were replaced, sometimes using tracked vehicles to haul them in. "Most of this hard, time-consuming work had to be repeated over and over again at each location with downed wires," Boeckman says.

Presque Isle had over one-half of their members—about 18,290 locations—out in their seven-county service area.

Towards the storm's edge, Cloverland and Alger Delta handled their own outages without outside help. "Our line crews began responding to outages early Saturday morning and hit it hard all weekend and continued into Monday morning," says Wendy Malaska, Cloverland marketing/communications director. About 10,000 services across their five-county area were affected, and Alger Delta had 40-50 outages.

"I cannot remember one this bad since the windstorm of '98, and cannot describe how bad it is on the line personnel...extremely challenging!" explains Joe McElroy, MECA's safety/loss control director. Deep snow also means bucket trucks are replaced by lineworkers climbing the slippery poles.

Each co-op has unique stories about how this record storm affected both their members and employees.

Some Cherryland members needed help and came right to the co-op's Grawn office to get it when they needed water for their horses. They came twice a day, meeting Member Service Manager Kevin Cragg outside as he filled up their big buckets with water. Other times, thoughtful members brought baked goods for employees to eat as they manned the office at all hours of the day and night.

It's not uncommon for co-op employees to

Photo – Great Lakes Energy

help arrange hotel rooms and meals for field crews, but one co-op even had employees who helped with lineworker laundry and another found a school bus to shuttle crews to and from the hotel after their equipment was stolen in the parking lot.

"It takes everyone to help out by doing things they don't normally do to get the job done," explains Scott Szymoniak, PIE&G's operations/engineering manager. This may mean an accounting employee takes outage calls and member services and management employees run materials and guide outside crews to outage sites.

And sometimes, it means co-op members help, too. Some PIE&G members drove lineworkers on their personal snowmobiles or tracked quads to reach outage sites. "Our members were glad to do anything to help," Szymoniak says.

At Great Lakes Energy, co-op members used snowblowers and tractors to clear roadways and to-the-pole paths for the crews, says operations director Dave Matz. A local restaurant provided meals and refused payment.

On the seventh day after the storm, Cherryland still had 150 lineworkers fixing outages that affected about 400 members; Great Lakes Energy still had 290 members without power; and PIE&G about 25.

The storm's magnitude will incur huge costs for the co-ops that bore the worst damage. For example, Cherryland estimates a final cost in the \$1 million range, Great Lakes \$1.5 million, and PIE&G in the \$500,000 range.

"There were no winners in this thing," says Siepker. "Only survivors. We did the best we could to get power restored. Our members did the best they could to stay warm. Many members told us they would never take electricity for granted again."

## America's National Parks:

# Big Value for a Low Price

**W**hen it comes to vacations, America's national parks are a perennial favorite. From roaring geysers and sandy seascapes to frontier forts and presidents' homes, these unique treasures boast magnificent landscapes and cultural enrichment.

Lately, they've been getting even better. Visitors are reaping the benefits of the 2009 American Recovery and Reinvestment Act, which funded improvements to national park facilities and roads. Ninety-nine percent of these projects are finished, says Jeff Olson, spokesman for the National Park Service (NPS) in Washington, D.C. For example, the scenic Skyline Drive in Virginia's Shenandoah National Park sports dozens of new overlooks with jaw-dropping views and new interpretative signs.

### Something for Everyone

National parks, nearly 400 now, offer something for everyone at a relatively low price. Enjoy hiking, biking, swimming, fishing and rafting, shop for locally made crafts at gift

shops, tour museums, explore cliff dwellings, take guided full-moon walks, and learn about science and biology from ranger talks.

The beauty and slower pace of a park vacation also draws people together. Parents are reminded that food cooked over a campfire tastes better. Kids remember how to make their own fun. Those in their '20s finally bond, adult to adult, with their parents. Even the most sullen teenager may crack a smile by the end of a day or two.

"For generations now, people have introduced members of their family to national parks," Olson says. "Parents and grandparents are now introducing their children to parks. These are places where you learn about American heritage and culture."

And, those who enjoy technology won't be disappointed, either. Visitors to the National Mall in Washington, D.C., can use the NPS' free app. The app displays the user's location, highlights historical and cultural points and offers tour suggestions, and gives directions to over 70 sites. Inside other national parks (rural or urban), visitors can deepen their

**Elliot Creek Falls along the North Country Scenic Trail in the U.P.**

experiences by using smart phones and other mobile devices at visitors' centers and exhibits. Park websites sport live webcams, podcasts and links to lively social media, as well.

### Michigan National Parks

Traveling closer to home, Michigan has its own wonders waiting for discovery within Isle Royale National Park, Keweenaw National Historic Park, Sleeping Bear Dunes, Pictured Rocks National Lakeshore, or the North Country Scenic Trail. Together, these national parks hosted 1,912,324 visitors in 2011.

A visit to **Isle Royale**, the country's only island national park, truly means "getting away from it all." At 45 miles long and 9 miles wide (third largest in the U.S.), hikers especially love its remote location and total automobile ban. It's also common to hear distant wolf calls or see a wandering moose or other wildlife in its wonderful, rugged scenery.

Over 160 miles of foot trails, 36 campgrounds, and one hotel are described as ample for those who make the effort to visit "one of the most pristine wilderness areas on earth." Note that the visiting season here is short (mid-April through October), and the Park Service's M.V. Ranger III ferry connects

Isle Royale with Houghton from early June to mid-September.

Established in 1992, **Keweenaw National Historic Park** celebrates life and history on the Keweenaw Peninsula, especially relating to 7,000 years of copper mining. The peninsula houses the oldest, largest lava flow, which created the largest known deposits of accessible pure (97 percent) native copper on Earth. Early miners could break the red metal from the rock to make jewelry and tools, and into coins and electric wire by later generations.

The entire picture of copper mining here, according to Wikipedia, is best-represented by the Village of Calumet (social, ethnic, commercial themes); former Calumet and Hecla Mining Company properties (corporate paternalism and power); and former Quincy Mining Company properties (extraction/processing themes). There's lots more for visitors to experience, from the Quincy Mine Hoist Museum in Hancock to a tour of the Delaware Mine near Copper Harbor, and many other museums, heritage centers, and Porcupine Mountains Wilderness State Park is nearby, too.

**Pictured Rocks National Lakeshore** stretches 42 miles along Lake Superior, and offers 15 miles of giant red, orange and gold-colored sandstone cliffs.

The home of America's first national lakeshore, the rock formations shape natural

Photo - John F. Mitchell

archways, sea caves and waterfalls that are framed by sand dunes. You can see the Rocks close by paddling a kayak through their tunnels, or backpack among the peaks and bases. Most visitors, however, get close on boat tours that depart daily from Munising, or you can hire a plane in Grand Marais or drive to the Miner's Castle overlook.

Other notable sites are many waterfalls,

including Munising Falls, interpretive centers, and nearby forests, lakes and opportunities for four-season activities.

Running through Pictured Rocks is the longest finished segment (581 miles) of the **North Country Scenic Trail**, which also winds through Porcupine Mountains Wilderness State Park and other parts of the U.P. before crossing the Straits of Mackinac into the Lower Peninsula.

Crossing seven northern states, this is the longest of eleven National Scenic Trails. Designed to provide peaceful recreational opportunities in some our country's outstanding landscapes, it will stretch 3,200 miles from North Dakota to Vermont when it's done. Over 2,100 miles are already certified.

The North Country Scenic Trail is accessible mostly on foot, by hiking, snowshoeing or cross-country skiing, although bicycles and horses are allowed in some designated areas.

Most Michiganders know that a visit to **Sleeping Bear Dunes National Lakeshore** has to include "climbing the dunes," but while you're around, try the seven-mile-long Pierce Stocking Scenic Drive. This route takes you through several hundred feet of changes in elevation, vegetation, climate and great views of Lake Michigan. From the top of Sleeping Bear, you can see the Manitou Islands, a favorite place for campers and scuba divers.

Michigan also has 1,776 National Register of Historic Places listings, one National Heritage Area, 12 National Natural Landmarks,

*Continued ▶*

## Admission to Most National Parks Is Free!

Most of America's national parks don't have an entry fee.\* For parks that do, admission is from \$3 to \$25 (good for an entire carload of people for a week). There are also bargain annual passes, good at over 2,000 federal recreation sites, including a seniors' pass for \$10. In Michigan, you can now buy a pass when you renew your driver's license.

The National Park Service has fee-free days in 2012 at over 100 national parks that usually charge entry fees. The dates are:

- **April 21-29** – National Park Week
- **Sept. 29** – National Public Lands Day

● **June 9** – Get Outdoors Day

● **Nov. 10-12** – Veterans Day weekend.

Search [nps.gov/findapark/feefreeparksbystate.htm](http://nps.gov/findapark/feefreeparksbystate.htm) by park name or state to see which states are offering fee-free days, call 202-208-3818, or connect on YouTube, Facebook and Twitter. Also, visit the Public Broadcasting Service's website for enriching park stories at [pbs.org/nationalparks.htm](http://pbs.org/nationalparks.htm).

Many park-related hotels, restaurants, shops and tour operators offer specials on fee-free days (see National Park Hospitality Association at [parkpartners.org/Special-Offers-for-2011.html](http://parkpartners.org/Special-Offers-for-2011.html) and National Parks Promotions Council at [nationalparksonline.org/special-offers/](http://nationalparksonline.org/special-offers/)).

To find other free attractions (zoos, museums, concerts and festivals) check [free-attractions.com](http://free-attractions.com) or a city's visitor center, chamber of commerce or state tourism websites for ideas in the area you're traveling. Washington, D.C., and New York City boast an array of free activities at [washington.org](http://washington.org) and [nycgo.com](http://nycgo.com).

\*Fee waiver includes entrance fees, commercial tour fees, and transportation entrance fees. Other fees such as camping, tours, concessions and third party fees are not included, unless stated otherwise.

## National Parks, from page 13

and 34 National Historic Landmarks, according to the tourism website at michigan.org.

### Lodging = More Than Camping

For lodging, people sometimes picture a grand historic lodge or a tent campground. While these are great options, there are typically other choices through concessioners in the park or in nearby towns. One reason that Great Smoky Mountains Park is continually ranked as most popular U.S. national park is accessibility. It's close to Gatlinburg, TN, and Cherokee and Bryson City, NC, which cater to visitors with a wide variety of affordable accommodations, restaurants, shops, museums, and other attractions.

Popular Acadia National Park in Maine has no "roof" lodging, but the nearby historic village of Bar Harbor offers house vacation rentals, cottages, motels and bed-and-breakfast inns that suit all budgets.

### Planning Ahead Is Key

Consider your travel priorities—do you want to drive your car, or fly to the closest airport and rent one? Cook or eat out? Sleep under the stars in the back country or on a real bed? Do you prefer to be near cities or to venture out?

People are surprised that some parks are close to major metropolitan areas. Cuyahoga Valley National Park, blessed with a winding river and fascinating canal history, is only 30 minutes from Cleveland. It also hosts scenic train rides and evening concerts. Stanford House, a bed-and-breakfast inn in the park,

**Grotto Falls in the Great Smoky Mountains**

has a self-service kitchen and wireless internet. The renovated farmhouse's room rates, which include a continental breakfast with cereal and fresh fruit, start around \$50 for a small room with a bunk bed and shared bath.

If staying in a quaint cabin is for you, primitive ones can be rented in Shenandoah. The large capacity cabins (roughly \$30-\$45 nightly) have no running water or electricity, but are equipped with mattresses, cookware, and either a wood fireplace or woodstove. In most cases, you carry your items in from between a few tenths of a mile to several miles in. Returning guests rave about the mountain views and the cabins, booked through Potomac Appalachian Trail Club, an authorized concessioner.

Another get-away-from-everything place is Big Bend National Park in Texas. It has

spectacular canyon and mountain scenery, with lots of plants and animals and more types of birds than any other national park in the United States.

It pays to do your homework. Biscayne National Park boasts urban proximity, colorful coral reefs, and first-rate scuba diving and snorkeling. It's within sight of downtown Miami, but that doesn't mean its logistics are easy. More than 95 percent of this marine park is covered by water, so transportation is by boat here.

Finally, stay open to lesser-known parks. A newer park, the Black Canyon of the Gunnison in Colorado, receives a fraction of the Grand Canyon's numbers. However, its canyon's combination of narrowness and vertical drop are unmatched by any other in North America.

### Finding Other Travel Deals

Popular websites such as [tripadvisor.com](#), [smartertravel.com](#) or [travelzoo.com](#) offer advice from fellow travelers about places to eat, play and stay, plus a wide variety of planning tools, including searches for flights, hotels, restaurants and vacation rentals.

There are also many free or inexpensive cell phones apps that help travelers save money, too. Check user reviews before downloading, and some travel websites ([tripadvisor.com](#)) and companies offer free mobile apps.

Social media is great for getting current travel advice. From photos to tweets on great-and-not-so-great deals, insiders dish about lodging, food and attractions. One of the oldest is [virtualtourist.com](#).

Other handy sites for travel deals include [affordabletours.com](#), [restaurants.com](#), [hotels.com](#), and [ecruises.com](#).

**Visiting parks, greenways and other recreational areas is a great way to have a good time for free.**

# Making Better Food

**T**oday, most people only see glass milk bottles in antique stores, or maybe on a dining table holding fresh flowers. But in midwest Michigan, where Hilhof Dairy is based in Hersey, you'll find them in many independently-owned grocery and health food stores.

"It's a healthier way to store milk," says William Straathof Jr., who runs the farm with his wife Connie, and their family. "Plastic leaches formaldehyde. And when not recycled, it fills up our landfills."

Milk products produced by the 48-cow certified organic farm include whole, 2 percent, skim and cream—all packaged in glass bottles that customers can return to the store for a \$2 deposit. They are later picked up and taken back to the farm, where they are sterilized and used again.

"We pasteurize our milk for 30 minutes at 145 degrees, and then it goes directly into the glass bottles with a cream line," he explains. "When cream is left in its natural state (not homogenized), it's 100 percent digestible, and contains more nutrients."

"No homogenization also means a shorter shelf-life, so our products come to customers fresher," William continues. "The milk isn't being trucked long distances or stored in silos."

And, the use of glass bottles is just one example of how the Straathofs practice sustainable agriculture. In addition to milk products, the family also raises and sells organic, grass-fed pork and beef.

"We sell our pork in the summer months—ham, pork chops, sausage and more—and we're sold out in two months," William adds proudly. Their beef products—from New York Strip to ground beef and everything in between—are available year-round.

The Straathofs get all this work done with the help of their children, Karston, Ana and Bianca, and their families. The farm has been in the family for over 50 years, since William Sr. named it "Hilhof Farm" by combining his last name with Hillenaar, his wife Nellie's last name. William Jr. took over the business in the late '70s after his father passed away.

A typical week includes milking the cows, running the farm's retail store, delivering

Photos courtesy-Hilhof Dairy

Operating Hilhof Dairy takes a whole family, including (front row, L-R) Connie and William Straathof Jr., Dave and Ana (Straathof) DePew with their children (Ana holding Landyn and back row, Maddie and Kendal), with Bianca Straathof, Nate Kidder and Karston Straathof on the far right. The DePew's are members of Great Lakes Energy Cooperative.

products to customers, and keeping detailed records for organic certification.

Ana DePew, the Straathof's daughter, and her husband David, a lineworker for Great Lakes Energy Cooperative, started raising certified organic chickens and eggs at their own farm last year. They sell most of their eggs at the Hilhof Dairy store and, if available, to three other grocers. "We can't raise enough chickens for the demand of organic eggs out there!" Ana exclaims.

"One of the biggest challenges in organic farming is that we cannot use man-made chemicals or fertilizers on our land, and if an animal gets sick, we can't use antibiotics," Ana adds. They have had to find more natural ways to keep their land and animals healthy, and they do so by talking to other organic farmers and doing a lot of research.

While achieving organic certification takes time, the pay-off is substantial even for small operations like Hilhof Dairy. They stopped

using man-made chemicals and fertilizers in 1996, and the farm was certified in 2004.

The Dairy's organic products are available at their farm store, and at over 46 stores including the Cadillac, Grand Rapids, Kalamazoo and Brighton areas. (You can also visit online at [HilhofDairy.com](http://HilhofDairy.com).)

"And, we now offer chocolate milk made with Dutch cocoa," William adds. Using half the sugar and more cocoa than commercial companies gives it a superior chocolate flavor, he adds.

"More stores want our milk, but we don't want to get too big," William says. "We want to stick to the basics—making better food for people."

*Jodi Bollaert is a native Michigander and consummate advocate of Michigan-made. Visit her Facebook page at [facebook.com/FavoriteMichiganProducts](https://facebook.com/FavoriteMichiganProducts) for regular posts about the wonderful things made in the mitten.*

**Tell us about your favorite, or a unique, Michigan-made product. Email [czuker@meca.coop](mailto:czuker@meca.coop) or send to: Country Lines, 2859 W. Jolly Rd., Okemos, MI 48864. Be sure to share why you like it, or a unique story to go with it.**

of international experts and enthusiasts. One of those members, Scott Kunst (of Old House Gardens in Ann Arbor), recommended that the Peony Garden follow the English model of historic preservation by insuring that plants are backed up and do not disappear—thus, the “Peony Project” was born.

Besides providing a spectacular site to view peonies, the Peony Project is establishing resources for peony lovers and historic garden curators alike, with five primary goals:

### **Verification & Identification**

There are still some plants of questionable identity in the Garden. “We use sources like the American Peony Society, old gardening magazines and antique nursery catalogs to help us identify questionable plants,” says Carmen Leskoviansky, collections and natural areas specialist at Nichols Arboretum.

### **Restoration**

“We have the original map from 1927 showing the layout,” states Leskoviansky. “While many plants are original, some were replaced with modern varieties and other plants are no longer in the trade. So, working with the advisory board, we decide which plants to use in the restoration.”

### **Expansion**

“Last fall we added 14 tree peonies from American and European varieties, and we’re hoping to add a large collection of tree peonies from China,” comments Leskoviansky.

### **Backup**

“We’ve already started to back up the peony collection offsite by partnering with the Girl Scouts of Michigan, who took divisions and placed them at Girl Scout Camps throughout the state,” says Grese. And, Michener is working with the North American Plant Collections Consortium to establish the Peony Garden as “the” reference collection by providing peony cuttings to gardens throughout the continent.

### **Education**

The Peony Finder website allows gardeners to browse past and present varieties. “This new site is under construction and won’t be released until July, but gardeners who would like to help test the website can email Michener at [mbgna.curator@umich.edu](mailto:mbgna.curator@umich.edu).

This distinctive “Lois Kelsey” peony is called a “semi-double” variety.

The “Do Tell” peony is a Japanese variety with soft, shell-pink petals and a deep pink center.

*The Peony Garden’s 90th anniversary celebration runs June 2 to June 10. To learn more, visit [lsa.umich.edu/mbg](http://lsa.umich.edu/mbg).*

# Camping With Kids

**M**y oldest daughter and I have always seen eye-to-eye on one very important issue: no camping. While my husband and youngest girl revel in the idea of nights spent under the stars, Berit and I put the kibosh on camping every summer.

But then, last summer, my husband signed us up for an entire long weekend of camping without running it past me first. Before I could feign illness or enlist my pint-sized partner in refusal, we were tucked into a forest of tall trees using bottled water to brush our teeth. And I'll be darned if it wasn't that oldest kid who was first to leap barefoot into the dirt, to wonder at animal tracks and calls, to fall asleep filthy after tracking shooting stars. I couldn't help it: I loved watching my family camp.

You'll notice I didn't say that I loved camping, too. Doesn't matter. Have you ever seen what camping does to kids? When their toys are left at home they pick up sticks—sticks!—and do stuff with them. They build dirt mountains and jump on top. They eat almost anything without complaining.

And it turns out camping isn't just good, dirty fun. The U.S. military has found that kids who spend lots of time outdoors have more complex sensory abilities. An 18-month study of 800 military personnel found that the best bomb spotters were rural people—those who'd grown up in the woods hunting—as well as those from tough urban

Photo - © iStockphoto.com

neighborhoods, where it's equally important to be alert. They tend to take in the entire environment, versus focusing on one piece of information at a time.

So, maybe you don't aspire to send your kid bomb sniffing, but there's more. Research suggests that too much time indoors is linked to nearsightedness, while outdoor play that uses all the senses and a good dose of spatial awareness leads to an increased ability to learn. Another great benefit? These kids know how to sense and avoid danger. And the toasted marshmallow on top: folks who spend a lot of time outdoors as kids tend to more fully engage in life.

Camping is a tough pill to swallow for a lot of people these days, who are pressed for time or live in an area rich with museums and playgrounds. Considering camping, with its lists of items needing to be packed, assemblage of various sleeping quarters, and

resulting pile of dirty laundry (and we're talking real, scrub-inducing dirt here), makes a lot of parents want to head for the nearest Chuck E. Cheese.

But consider this: In 30 years, when you're gathered with your children and grandchildren sharing memories, what will you say? Will you reminisce over Junior's high skee-ball score? Or will you laugh about the time Dad flipped the canoe? And more importantly, how will these memories have shaped who your children have become?

## Mitten-State Camping

With more than 1,000 campgrounds statewide, Michigan has a lake, river, beach or forest for your family.

Not ready to hit the trail on your own? The DNR is hosting over 200 camping events, called "Rec 101," in 2012. They'll provide gear and expert instruction on everything from archery to windsurfing, all for free.

Be sure to get a "Recreation Passport" (instead of the old "state park sticker") for \$10 when you renew your license. It gives you discounts at over 800 Michigan businesses, and is good all year.

Michigan State Parks see about 22 million campers in the parks annually. Get out there with them this year. To learn more, visit [michigan.org](http://michigan.org) and click on "Camping & Recreation," or call 800-784-7328.

### Keep It Simple: Tips For A Great Camping Trip

- **Be safe.** Learn about the wildlife where you're going, and be prepared to deal with it. Have your kids wear a whistle and teach them to blow it if you get separated.
- **Make them help.** It's not always easy, but involving kids in set-up and camp chores will teach important, brain-boosting skills and give them a healthy dose of confidence.
- **Show, don't tell.** Point out landmarks to give kids a sense of direction and place. Gather around footprints and talk about the animal that made them. Figure out why a particular place has its name (Sleeping Bear Dunes, for example).
- **Be outdoors.** Don't bring along video games. Find things to do outside, like paddle ball, cairn-building, fairy house crafting, and shell collecting.
- **Other resources.** Check your local library or bookstore for "Best Tent Camping in Michigan," by Matt Forester, 2011.

*Lisa Doublestein is a regular Country Lines freelance writer, educator and mom.*

Mediterranean Inspired Chicken Wraps

# Mediterranean Dishes

The colorful, flavor-filled dishes known as "Mediterranean cuisine" originate from countries that border the Mediterranean sea—Morocco, Egypt, Greece, Israel, Lebanon, Syria, Turkey, Italy, France and Spain. This region not only produces a variety of tasty meals, they are good for your health! Those on Mediterranean diets are less likely to have high cholesterol, high blood pressure, or become obese. It's hard to ignore the benefits of eating this marvelous food.

## **Crushed Lentil Soup**

1 med. sweet onion, finely chopped  
2 T. olive oil  
4 cloves garlic, minced  
2 c. vegetable broth  
3 c. water  
17.6-oz. pkg. Steamed Lentils from Trader Joe's or 3 c. cooked lentils  
1 pinch saffron  
1 t. coriander  
1 t. cumin  
1 t. pepper  
1 t. salt  
1 t. pepper  
1/4 c. lemon juice

In a large pot on medium heat, sauté onion with oil and garlic 3 to 5 minutes, or until

onion is translucent. Add broth, water, lentils, and all spices (do not add lemon juice). Reduce heat and bring to simmer. Cover and cook 10 minutes. Puree in blender or with hand blender until smooth. Let sit at least 30 minutes before serving for best flavor.

## **Mediterranean Inspired Chicken Wraps with Cucumber Dill Sauce**

### **Cucumber dill sauce:**

1½ c. plain low fat yogurt  
2 t. fresh lemon juice  
1/2 c. cucumber, diced  
1 clove garlic, minced  
pinch of salt and pepper  
2 T. fresh dill, chopped

### **Chicken:**

3 T. olive oil  
2 T. fresh dill, chopped  
3 cloves garlic, chopped  
1 t. Italian seasoning  
2 T. fresh lemon juice  
1 t. kosher salt  
1/2 t. black pepper  
4 boneless, skinless chicken breasts  
tortillas, pita bread, or flat bread  
tomato slices  
thinly sliced onion

In small bowl, combine all sauce ingredients. Cover and refrigerate. In a large storage

bag, add oil, dill, garlic, Italian seasoning, lemon juice, salt and pepper. Seal bag and smush around until combined. Add chicken, reseal bag, and shake chicken inside to coat. Put bag in refrigerator for at least 2 hours. When ready, grill chicken for 8 to 10 minutes per side on med-high heat or until no longer pink. Thinly slice chicken on cutting board. To serve, put several pieces of sliced chicken on bread. Add tomato slices and onion. Top with a few tablespoons of dill cucumber sauce.

Kirsten Kubert, Cherryland  
comfortablydomestic.com

## Spinach Cups

*2 eggs  
1 clove garlic, minced  
1 8-oz. package crumbled feta cheese, garlic/herb flavor  
1 small onion, minced  
2 10-oz. boxes frozen, chopped spinach, thawed and squeezed dry  
4 packaged pre-baked mini phyllo dough shells  
1 c. shredded mozzarella cheese*  
Mix first four ingredients in large bowl. Mix in spinach. Place phyllo shells on a baking sheet; fill each with spinach mixture. Sprinkle small amount of cheese on top. Bake at 400° for 8 min.

Connie Foltz, McMillan

## Cucumber, Tomato and Feta

*6 c. coarsely chopped cucumbers (2 lbs.)  
2 lg. tomatoes (1 lb.), coarsely chopped  
1 bunch scallions, chopped  
1 c. pitted olives, halved  
1 7-oz. package feta, crumbled, divided  
1/2 c. coarsely chopped fresh mint  
6 T. extra virgin olive oil  
1/4 c. fresh lemon juice  
kosher salt and freshly ground black pepper*  
Combine cucumbers, tomatoes, scallions, olives, half the feta, and mint in a large bowl. Whisk oil and lemon juice in a small bowl; season with salt and pepper. Pour over salad; toss and coat. Season to taste with salt and pepper. Sprinkle remaining half of feta over and serve.

Lisa Bechaz, Petoskey

## Moroccan Style Potato Pancakes

*1 lb. yellow-fleshed potatoes  
1 carrot, finely diced  
2 T. canola oil  
2 c. finely chopped onion  
1 garlic clove, finely chopped  
1 c. frozen peas  
3 large eggs, beaten*

*1/2 t. turmeric  
3/4 t. salt  
1/8 t. ground pepper  
4 scallions, white and green, chopped  
1/2 c. chopped cilantro leaves*  
Peel and cut potatoes into even-size chunks. Place in saucepan; cover and boil until tender. Drain and mash. Meanwhile, sauté carrot and onion in olive oil until tender. Turn off heat and mix in garlic and frozen peas. Cover and let sit while potatoes are cooking. Mix together potatoes, vegetables, eggs, spices, scallions and cilantro. Form into patties. Gently sauté in canola oil in frying pan until golden brown, turning once.

Margie Guyot, Ellsworth

## Lamb Sliders

*2 lbs. ground lamb  
1 large yellow onion, grated  
2 garlic cloves  
1/2 c. chopped parsley  
1/2 t. cumin  
1 t. allspice  
1 t. ground coriander  
salt and pepper to taste  
1 egg, lightly beaten  
1 red onion, thinly sliced  
2 tomatoes, sliced  
1 pkg. of 12 whole wheat dinner rolls*  
Combine meat, onion, garlic, parsley, and spices. Add egg; mix until thoroughly combined. Form 12 balls of meat mixture and flatten into patties slightly larger than dinner rolls. Grill or pan fry patties until medium-well. Cut dinner rolls in half; butter and toast on grill or broiler until lightly brown. Garnish

with red onion, tomato and tzatziki sauce.

## Tzatziki Sauce

*3 T. olive oil  
1 t. white vinegar  
2 cloves garlic, minced  
1/2 t. salt  
1 c. Greek yogurt  
1 c. sour cream  
2 cucumbers peeled, seeded, finely minced  
1 t. dill*  
Combine oil, vinegar, garlic and salt in bowl. Mix well. With a whisk, blend yogurt and sour cream; add the oil mixture and mix well. Add cucumber and dill. Chill for 4 hours.

Jeff Cullen, Bellaire

## Penne Puttanesca

*4 t. chopped garlic  
2 t. red pepper flakes  
2 T. butter  
1/4 c. olive oil  
1/4 c. grated Asiago cheese  
1 tomato, chopped  
1/4 c. sun dried tomatoes, crushed (opt.)  
12 black olives, pitted and chopped  
1/2 c. Chardonnay  
2 T. capers  
6 anchovy fillets, finely chopped  
1 lb. pasta, cooked (penne or mostaccioli)*  
Sauté the chopped garlic and pepper flakes in butter and olive oil over medium heat for 2 minutes. Add all other ingredients, stirring constantly. Simmer for 5 minutes. Spoon over freshly cooked pasta. Add additional cheese if desired. Don't forget the anchovies, they are the key ingredient! Serves 4.

Mail to: Country Lines Recipes, 2859 W. Jolly Rd., Okemos, MI 48864; or email [recipes@countrylines.com](mailto:recipes@countrylines.com).

# Change Is Good

That's what a Shelby couple found with their air-source heat pump.

**F**or years, Great Lakes Energy members Linda and Carl Kotzian heated over 1,300 sq. ft. of their Shelby home with fuel oil and wood. A central air conditioning system kept them comfy in the summer.

Three years ago, the couple realized it was time to make a change. They had an air-source heat pump installed. Linda, who is also GLE's senior communication/marketing specialist, and her husband are pleased with their decision.

Several developments led to their move to a heat pump. Their central air conditioner was nearly 30 years old and required more

maintenance. Carl developed back problems which limited his ability to make firewood. Heating oil prices increased and now average over \$3 per gallon. In addition, Great Lakes Energy offers a \$250 rebate and lower electric rate for qualifying air source heat pumps.

Rather than buy a replacement air conditioning system, they invested \$7,500 in an air source heat pump that cools their home and helps heat it, too. Great Lake Energy's Controlled Heating program allows their heat pump to be separately metered at a 3 cents/kilowatt-hour discount. In return, GLE reserves the right to interrupt it during periods when its costs to purchase power are the greatest.

Today, they use less fuel oil, which means more money stays in their pockets.

"We were looking for something that would economically heat us in the fall and spring so that we would only have to rely on the more expensive fuel oil during the very dead of winter," Linda explains.

By taking advantage of a more efficient system and GLE's lower rate, they received an unexpected benefit. "The fact that our cooling bills also drastically decreased was a much-appreciated bonus," she adds. When temperatures topped 90 last summer, their highest monthly cooling bill was \$20.10.

Their heat pump operates most efficiently when the outdoor temperature is above 35 degrees, which made it an ideal heating choice for fall and spring. In a normal winter when daily highs are often well below that temperature, their oil furnace takes over.

An air-source heat pump moves heat naturally found in the outside air into the home. According to the Department of Energy, "when properly installed, an air-source heat pump can deliver one-and-a-half to three times more heat energy to a home than the electrical energy it consumes. This is possible because a heat pump moves heat rather than converting it from a fuel, like in combustion heating systems."

In the summer, the heat pump works like a refrigerator by transferring heat from the inside to the outside. Heat is transferred through a refrigerant that circulates through the heat pump.

Home construction and lifestyle are equally important to reducing home heating and cooling costs.

The Kotzian home has 6 inches of insulation in the walls and 8-10 inches in the ceiling. Most of the windows and doors are well-insulated.

The thermostat is normally set between 68-70 degrees in the winter and 72 degrees in the summer.

"Since Carl is retired and home most of the time, we keep the temperature at even, comfortable settings," she says.

How much does it cost to operate their air-source heat pump? See the related chart.

**Air-Source  
Heat Pump Operating Costs  
for the Kotzian Family in Shelby**

	2010		2011		2012	
	kWh	cost	kWh	cost	kWh	cost
JAN	20	\$1.55	160	\$12.69	280	\$23.06
FEB	120	\$9.26	40	\$3.10		
MAR	320	\$24.69	320	\$24.75		
APR	260	\$20.06	360	\$27.84		
MAY	180	\$13.89	320	\$24.75		
JUN	80	\$6.17	140	\$10.83		
JUL	180	\$13.89	160	\$12.37		
AUG	260	\$20.06	260	\$20.10		
SEP	120	\$9.56	140	\$10.83		
OCT	180	\$14.34	180	\$13.92		
NOV	280	\$22.30	420	\$32.50		
DEC	180	\$14.34	360	\$28.07		
<b>TOTAL</b>	<b>2,180</b>	<b>\$170.11</b>	<b>2,860</b>	<b>\$221.75</b>		

Low-usage months indicate either the main heating systems (oil/wood) provided most of the heat or mild weather conditions meant little need for heating or cooling. Costs reflect the Controlled Heating program's 3 cents/kWh discount. PSCR cost is included, but Energy Optimization Surcharge and state sales tax are not.

# Easy Ways To Pay

Your co-op offers many convenient ways to pay your monthly electric bill.

**Prefer to pay in person?** Bring your payment to any of our GLE locations in Boyne City, Waters, Kalkaska, Reed City, Newaygo, Scottville, Hart or Wayland, with convenient drive-through windows in Hart, Newaygo and Scottville. We accept cash, check, money order, credit or debit card (processed as credit) payments.

Several local businesses also accept payments for GLE bills that are not delinquent. Visit [gtlakes.com](http://gtlakes.com) or contact us for the location of the pay station nearest you.

**Like paying by phone?** Call 888-485-2537. Member service representatives are available 8 a.m. to 5 p.m. Monday through Friday to take your payment over the phone. They can use your bank account information to debit your checking account or will accept a credit or debit card payment.

**Want to pay online?** Visit [gtlakes.com](http://gtlakes.com). You'll need to set up a user name and password. After that, you can log-in anytime 24/7

Photo - © iStockphoto.com

to pay your bill or access other information about your account.

**Sign up for automatic payments** to ensure your bills are always paid on time. GLE schedules deduction of the amount due each month. Automatic payments can be deducted from checking or savings accounts or charged to your credit or debit card.

**Want nice, even, monthly payments?** Budget billing is for you. Monthly bill amounts stay the same and are adjusted annually based on your previous year's usage. To enroll, a member must have 12 months of usage history and a zero balance at the time of enrollment.

**Late payment?** Call as soon as you realize your payment will be late and our member service reps will work hard to help you.

**Call 888-485-2537 or visit [gtlakes.com](http://gtlakes.com) for more details on ways to pay your bill.**

## your small change Makes a

**Can you give a few cents a month to help your community?** The People Fund program works because there is power in numbers. A contribution of less than \$1 each month adds up fast when thousands of Great Lakes Energy members get involved.

The needs of our local communities continue to grow, and you have the power to give the People Fund a bigger role in meeting those needs. We round up your electric bill to the next dollar and the amount, which averaged just 39 cents a month in 2011, goes into the People Fund. There are no administrative costs. All donations are returned to our local communities.

# Harvest Wind Farm's Annual Output Increases Again

**Electricity Generated Annually by the Harvest Wind Farm**

**F**avorable weather conditions in 2011 led to record output for the Harvest Wind Farm. The project's 32 turbines generated 142,819 megawatt hours (MWh) of electricity during the year, surpassing 2010's mark of 138,737 MWh.

Wolverine Power Cooperative is purchasing the total output of the Harvest Wind Farm under a long-term contract and supplying the electricity to its members.

"Harvest began commercial operation in December 2007 and is Michigan's first commercial-scale wind farm," says Dan DeCoeur, Wolverine's vice president of power supply. "This past year marked its fourth complete year of production."

Minimum wind speeds of eight miles per hour are needed to generate electricity at the Harvest Wind Farm. Prior to moving forward with a project like Harvest, a developer will spend months collecting weather data at a proposed site to be sure weather conditions are ideal. Meteorological towers standing about 200 feet in the air are used to evaluate potential sites. They monitor wind speed, wind direction and temperature.

The turbines at the Harvest Wind Farm measure 393 feet in height. Turbine towers, consisting of four sections each, rise 262 feet high, and the blades tack on another 131 feet. Each turbine at the wind farm required 100 acres of property leased from landowners. The spacing of the turbines across 3,200 acres ensures each turbine has the footprint needed for maximum output.

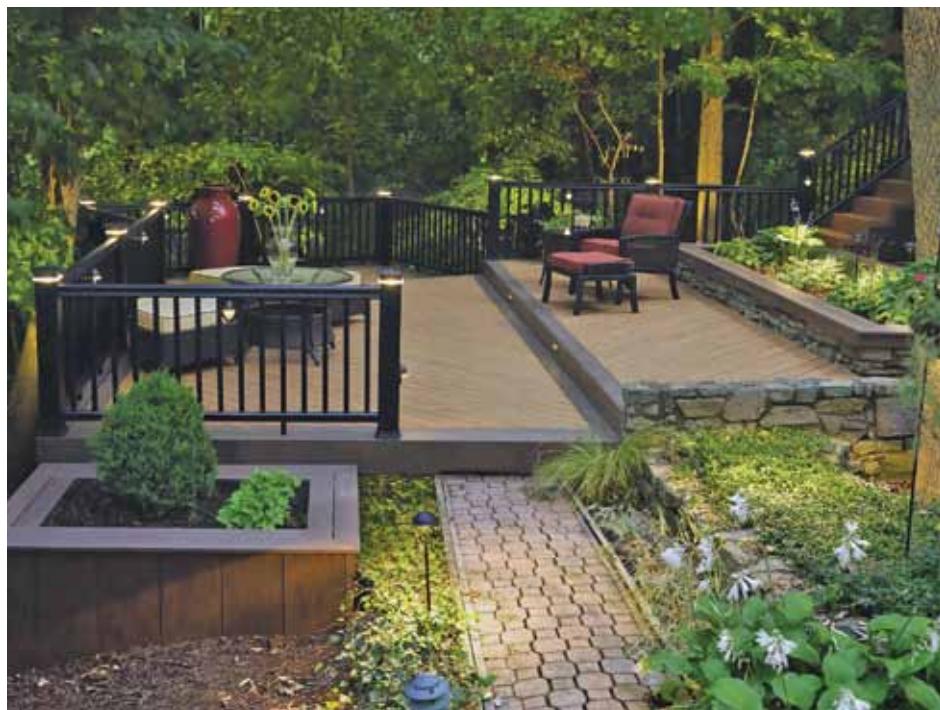

"When all turbines are operating at top speed, the wind farm has a total capacity of 52.8 megawatts of electricity, enough to serve about 15,000 homes," DeCoeur explains. "We are pleased to be affiliated with this project and proud to be a leader in renewable energy in the state."

Harvest is owned and operated by Exelon Wind. It is located in Michigan's Thumb area, between Elkton and Pigeon, and represents an investment of \$94 million.

## State Requires Renewable Energy

Electric providers in Michigan are required to meet a renewable energy standard under Public Act 295 of 2008. Compliance begins in 2012 and builds to 10 percent of total retail sales by the end of 2015, where it remains for 2016 and each year thereafter.

With its long-term commitment to purchase the entire output of the Harvest Wind Farm, in addition to power supply from a small hydro project, Wolverine Power Cooperative and its members meet the requirements of Public Act 295 for the next several years.

This composite deck railing has built-in low voltage lights under the post caps and in the balusters.

The maximum 12-volt output wattage will be listed on the transformer, and instructions for the fixtures should list their individual wattages. A prepackaged low-voltage lighting kit will include the proper size transformer for the number and types of lights.

When purchasing a low-voltage system, be sure to select a transformer with a built-in timer so there is no chance of accidentally leaving the lights on all night and wasting electricity. Photo-eye controlled transformers are the most convenient and provide the most sequencing options. One of the more convenient and efficient is "on" at dusk, "off" in a set number of hours (6, 8, 10). For security, an "on" at dusk, "off" at dawn is a good option, but uses more electricity.

Many homeowners prefer a variety of path, deck and floodlights to meet their landscape lighting needs. For much of the general lighting where the fixture is not noticeable, inexpensive plastic fixtures are fine. For more exposed areas, decorative metal fixtures with stained and etched glass are attractive. Another attractive option is natural wood fixtures.

To edge a path, snap-together lighted plastic simulated bricks are effective. The electrical connectors are built into the bricks so wiring will only need to run to the first brick along the edge. To light a deck, several decking material manufacturers offer built-in post and baluster lights with hidden wiring.

## Safety

For those that do a fair amount of landscaping and gardening, safety is another advantage to choosing low-voltage lighting. There is very little risk of electrocution when digging with metal garden tools because the wires on the ground carry only 12 volts of electricity. You will not be shocked if you accidentally nick one.

*If you have a question for Jim, please email [jdulley@countrylines.com](mailto:jdulley@countrylines.com), or mail to James Dulley, Michigan Country Lines, 2859 W. Jolly Rd., Okemos, MI 48864. Be sure to let us know which electric co-op you receive service from.*

# DIY Outdoor Lighting

**Q:** I'd like to add outdoor lighting by my deck and landscaping, but need something that's safe, efficient and easy to install. Is low-voltage lighting a good option? What are the best types?

**A:** Low-voltage lighting is an excellent outdoor option for deck spaces and landscaping. It is safe, efficient, and relatively easy to install for the experienced do-it-yourselfer.

## Efficiency

The energy efficiency of low-voltage lighting is fairly similar to standard line-voltage (120 volts) outdoor lighting. If you are interested in brightly lighting a large area, line-voltage lighting fixtures, such as low-pressure sodium,

are your most efficient choice.

The newest and most energy efficient low-voltage landscape lighting uses super-efficient LEDs (light emitting diodes) instead of standard incandescent bulbs. This type of technology is becoming more common, even for standard indoor lamps.

The LEDs are considerably more expensive than other alternatives, but use less than one-fifth as much electricity as equivalent incandescent bulbs and last as much as 10 times longer. The light from LEDs is more directional than from incandescent bulbs, so multiple LEDs are often used inside one fixture for broader lighting patterns and brightness.

Each low-voltage LED fixture may use as little as 1 watt of electricity compared to about 11 watts from a typical snap-in wedge-base low-voltage bulb. Some of the brighter fixtures, such as bollards, use a 2-watt LED, and floodlights use three LEDs. The light quality from LEDs is very white and pleasing.

## Installation

The most difficult part of installing a low-voltage lighting system is making sure the total wattage of all fixtures on a line does not exceed the rated output of the transformer.

## NEXT STEPS:

Ready to tackle your own DIY outdoor lighting project? Here are some companies that manufacture low-voltage lights:

**James Dulley** is a nationally recognized mechanical engineer writing about home energy issues for the National Rural Electric Cooperative Association.

Ed and Jan Wagner of Scottville treasure their opportunity to be second-time parents to their five year-old grandson Holden. The three enjoy a Dr. Seuss book together.

## Grandparents Become Grand Parents

A local People Fund grant helps smooth the transition. **Linda Kotzian**

**I**magine unexpected circumstances that require you to become a parent to one of your own grandchildren.

Mason County's Grandparents Raising Grandchildren (GRG) organization, launched 13 years ago through the Scottville Senior Center, helps meet the needs of relative caregivers of all ages and their "new" family members. One of the needs is for family activities that don't further strain already-stretched budgets. A \$250 Great Lakes Energy People Fund grant awarded in 2011 helped pay for one of many such events hosted by GRG.

Scottville resident Jan Wagner coordinates GRG programs and activities. She and her husband Ed have been parents to their five year-old grandson Holden for four years.

Wagner believes the situation of older relatives needing to become caregivers again is more widespread than most think. Although the group has existed for 13 years, the poor economy on top of more military deployments have added to the ranks of older caregivers.

And it's tricky for numerous reasons, Wagner relates. For one, parenting skills for some are a distant memory from as much as 30 years prior. Getting used to busy school schedules, new educational methods, extracurricular activities, and sometimes having to juggle a job on top of that takes a toll.

"What we handled so easily when we were in our 20s is now so hard," Wagner says softly.

Add to that the fact that little help is available for such proxy parent situations. Raising a child also takes considerable financial resources. Second-time parents deal with expenses for clothes and school-related items, additional food, occasional medical attention, and entertainment such as books, video games, and social outings with friends.

If the child is very young, they also incur diaper and baby food expenses. If the child is older, they struggle to provide desirable extras such as cell phones, a computer, and perhaps a car.

"It's unbelievably expensive and difficult to raise a child on a fixed income, and approximately 90 percent of grandparents don't receive assistance unless they qualify as foster parents," Wagner explains.

Legal measures to establish foster or guardianship status involve court appearances, and most find the necessary processes to be confusing, frustrating and expensive.

**Enroll today!** The People Fund program works because there is power in numbers. A Great Lakes Energy member's contribution is less than one dollar per month when you round-up your monthly bill to the next dollar, but it adds up fast when thousands of members get involved.

You can help the People Fund expand to meet the growing needs of Michigan residents. Contact us and we'll do the rest. You can also enroll online by visiting the "Your Community" section on gtlakes.com.

The GRG group helps guide its members through whatever path they choose. They help limit the confusion involved with finding legal representation and other qualifying services. Members support each other by sharing their hopes, successes and even pain related to their experiences.

"We're there to hold peoples' hands and walk them through it," Wagner says.

Struggles and all, second-time parents like the Wagners find their efforts fulfilling. While Wagner observes that children under the parenting care of a relative tend to need more attention than if they were part of a "normal" family, older relatives appear to have more patience and time to deal with the challenges.

"The rewards make us feel like we haven't given anything up at all," Wagner concludes, expressing great joy in simple pleasures like having her grandchild snuggle with her after a long, hard day.

She also notes that finding the funds to indulge in family activities together is one of the biggest struggles. Among other resources, GRG organizes free family activities for its members and depends on fundraisers and grants to pay for the events.

"That's why getting the People Fund grant was wonderful," says Wagner. "We certainly appreciate all the Great Lakes Energy members who contribute and make such grants possible."

The Wagners would know. As Great Lakes Energy members themselves, they also contribute to the People Fund.

*Building Your Quality of Life*

# Pity the Reader...

I'm hooked on a book by Stephen King. It's "11/22/63", his latest and maybe the first of his I've read. I say 'maybe' because I don't remember reading any others. But that says more about my memory than it does about the quality of King's books.

This is one of the better-written novels I've read in some time. At 849 pages, though, it's long enough to scare me away. I've been burned more than a few times by books much longer than they needed to be. I suspect that some publishers are afraid to edit their most popular writers

would be better as magazine articles.

They should take the hint in this quote often misattributed (including by me) to Mark Twain:

"I have made this letter longer than usual, only because I have not had time to make it shorter." (17th-century French philosopher and mathematician Blaise Pascal, 1623-62, written in a letter to a friend.)

Sure, it takes time to write a better, shorter book.

Among the authors I've found to be blessedly tight writers are Lee Child (the Jack Reacher novels), John Irving, P. D.

## *"I'm not getting any younger. Passing the time with bad writing is not in my best interest."*

for fear of offending them. So, you end up with 1,000-page Tom Clancy novels that are so dense with detail they're almost impossible to get through. And they seem lazy, as if Clancy doesn't really care about the reader or the quality of his work. It's not like he always wrote this way. He wouldn't have gotten published if he did. But now he's a factory writer and quantity seems more important than quality.

Clancy's not alone. Many popular authors and their publishers have given up on quality writing in favor of formulaic copycats that promise a quick profit for their investment. I'm sure the publishers are happy, but if you're like me, you feel like you're being taken advantage of.

I'm not getting any younger. Passing the time with bad writing is not in my best interest. Wouldn't it be nice if authors and publishers respected that and took a little of their time to make their books a little slimmer for all of us? Think of the time we'd all save.

Fiction isn't the only area that needs a sharp knife. I can't count the number of business and non-fiction books I quit reading halfway through because the authors kept repeating themselves. Some of them

James, the late Tony Hillerman, Margaret Atwood, Richard Ford, and Elmore Leonard. The gold standard is still Ernest Hemingway.

King's book could be shorter, too, but since there are two overlapping stories, I'll cut him some slack on this one.

King's writing style is deceiving in its simplicity, yet powerfully evocative in its description and dialogue. In case you don't know, the novel deals with a 40-something teacher from 2011 who finds himself transported in time to 1958 to try preventing the assassination of President Kennedy. It's a bit preposterous, but if you're willing to make the jump with King it turns into a satisfying trip to a different time and place. King evokes an era that is gone, but not forgotten, and when you're finally immersed in the music, language and styles of the late '50s and early '60s, it's hard to pull yourself out.

For pure escapism, "11/22/63" is hard to beat. It's not the Great American Novel, but it is a darn good story. (Hey, he even mentions the Upper Peninsula.)

I'm reading the book on a Kindle, a device that only could have been imagined in 1958. I suppose, to be true to the novel,

I should be reading it in an actual book. (If it's not in book form, can we still call it a book?) But there are a lot of good reasons to use an e-reader: They're light and easy to hold in any position, travel well, hold a ton of books, remember your place and, with adjustable type, make reading easier for many of us.

The downside is their impact on bookstores. Amazon.com was already pushing bookstores to the edge with online book sales, but with the popularity of the Kindle and other e-readers, actual bookstores are toppling over. That's too bad, because there's something warm and fuzzy about bookstores. They are key attractions in our best towns and cities. Among our favorite bookstores are Bestsellers Books & Coffee in Mason, five Schuler Books & Music (and their wonderful Chapbook Cafes) in the Lansing and Grand Rapids areas, Horizon Books in Traverse City, Petoskey and Cadillac, and McLean & Eakin Booksellers in Petoskey. They are spaces to savor, or, as the slogan for Snowbound Books in Marquette goes: 'The place for people allergic to life without books.'

There are close to 100 independent bookstores around Michigan. It's a tough business, but they're making it by providing personal services you can't get online—and by selling online themselves. They host authors and reading clubs, promote local talent, provide a gathering place—often with a cup of Joe and gourmet food, give kids a place to explore books, and help you find out-of-print books.

When Barnes & Noble closed their East Lansing bookstore a few months ago, a local student lamented on TV that she was sooooo sorry to see it go because she loved to browse through the books. It was a great place to spend time, she said. What she didn't spend was money.

We may use e-readers, but bookstores still draw us in, because we still like to buy actual books and have them around—as long as they're not two-pound monstrosities.

# Hot Water for Life.

**Marathon®**  
WATER HEATERS

## Saving is easy as 1-2-3:

When you purchase and install a new Marathon electric water heater through Great Lakes Energy, you can save three ways:

1. Unit rebates from \$250-\$500
2. \$50 rebate for a model rated with a .93 EF or higher
3. \$4 for every 5 feet of pipe wrap used to insulate the water outlet

Members may also qualify for our controlled water heating program and save up to \$90/yr.

Restrictions may apply, call for details.

**Call Today!**
