“The #1 Cause of Big Bellies — It’s Not What You Think!”

(By Frank K. Wood)

If you want to discover foods that will lower your blood pressure, cut your risk of heart disease, help you lose weight, and more — while trimming your grocery spending, too! — you need *Your Body Can Heal Itself: Over 87 Foods Everyone Should Eat*, an informative new book just released to the public by FC&A Medical Publishing® in Peachtree City, Georgia.

You’ll be amazed to know your kitchen is full of proven remedies — right now! See the delicious fruit juice that can help keep your mind sharp, the tasty sweet treat that can give you a good night’s sleep, and the easy breakfast favorite that can lower your cholesterol. And that’s just the tip of the iceberg!

The authors provide many health tips with full explanations.

- ▶ One miracle food contains nutrients that coat your arteries like a non-stick spray!
- ▶ #1 cause of big bellies: Trim your waistline by switching to a tastier alternative!
- ▶ Before you use an herbal supplement, make sure it’s safe by checking here.
- ▶ Get a good night’s sleep when you munch a handful of this fruit before bedtime.
- ▶ One extra serving a day of this fruit can fight strokes, obesity, and heart disease!
- ▶ Drink it to boost bones and battle osteoporosis. Surprise! It’s not milk.
- ▶ Cut your risk of memory failure in half! Just eat this once a week. Incredible!
- ▶ Don’t lose your vision! Eat the foods that’ll keep your eyesight sharp for years to come.
- ▶ This little fruit not only fights off pesky infections, it actually works when antibiotics don’t!
- ▶ The berry that may protect your vision!
- ▶ How a healthy 50¢ meal can help you lose weight and lower your cholesterol!
- ▶ The most important food you can eat —

for more energy, a more youthful body, and longer life.

- ▶ Slash your risk of Alzheimer’s with just 3 glasses a week!
- ▶ The 6 most dangerous foods in the country: One could be on your breakfast plate!
- ▶ Foods that lower your blood pressure, cut your risk of heart disease, and lose weight!
- ▶ Common spice blocks inflammation, helping you ward off arthritis, heart disease, and Alzheimer’s!
- ▶ Delicious three-in-one remedy soothes a sore throat, stops a cough, plus helps you sleep.
- ▶ Digestive problems, joint pain, fatigue, and more could be caused by this common food ingredient!
- ▶ Want to live a longer, healthier life? Then you should eat this twice a week.
- ▶ The seasoning that can help reduce deaths from heart disease, diabetes, and high blood pressure.
- ▶ Eat this cereal daily and help prevent constipation, colon cancer — even weight gain!
- ▶ The most inexpensive meat goes from tough to tender ... with just a tablespoon of this pantry item.
- ▶ Save \$50 to \$150 a month on the foods you love when you follow these 9 shopping secrets.
- ▶ Crush your cravings for sweet snacks with one simple secret. Try it. It’s easy!
- ▶ Give your arteries a good scrub naturally with this food.
- ▶ Little-known herbal medication can help reduce dementia symptoms and make people more cheerful!
- ▶ Just one serving per day lowers your risk of heart disease and stroke by 11%!
- ▶ One creamy, delicious food fortifies the immune system, bolsters bones, and helps you lose weight!
- ▶ Lose weight, lower cholesterol, and improve insulin levels with this fruit!

- ▶ One healthy oil lowers cholesterol and blood pressure, plus it relieves constipation, naturally!
- ▶ Avoid high blood pressure and add delicious flavor to your meals with spices rich in antioxidants.
- ▶ What type of fruit should you avoid? You’ll find it in nearly every store.
- ▶ This could be your body’s first line of defense against stroke, high cholesterol, and heart damage.
- ▶ Gain strength, stay sharp, and keep your bones strong with this energy-boosting power food!
- ▶ Arthritis pain? Try ginger!
- ▶ If you’re feeling bloated or gassy, reach for this tropical treat.
- ▶ Sweep artery-clogging cholesterol right out of your system with this little seed.
- ▶ Have it before dinner, and you’ll eat less. Weight-loss secrets your doctor doesn’t tell you.
- ▶ Keep your energy up throughout a busy morning with this fruity, high fiber breakfast.

Learn all these amazing secrets and more. To order a copy, just return this coupon with your name and address and a check for \$9.99 plus \$3.00 shipping and handling to: **FC&A, Dept. 3F-3103**, 103 Clover Green, Peachtree City, GA 30269. We will send you a copy of *Your Body Can Heal Itself*. You get a no-time-limit guarantee of satisfaction or your money back.

You must cut out and return this coupon with your order. Copies will not be accepted!

IMPORTANT — FREE GIFT OFFER EXPIRES FEBRUARY 24, 2010

All orders mailed by February 24, 2010 will receive a free gift, *Lose 150 Pounds in 15 Months, Naturally: Your Handbook to Permanent Weight Loss, guaranteed.* Order right away!

PAY STATION

Cherryland Electric office
5930 U.S. 31 South, Grawn

I enjoy being outdoors and going for a good run. Some runs are better than others. I have stumbled and fallen more than once, I must admit. Other times, my body is tired and sore as I slog around the rural countryside where I live.

Once in a great while, however, I am fortunate enough to “get in the zone” on a run. This is where everything feels good, nothing goes wrong, and it feels like I could go on forever.

Sitting back at my desk and reviewing the past year at your electric co-op, I feel like we were “in the zone” during much of 2009, and the reasons why follow.

We're Now Member-Regulated

One of our biggest 2009 accomplishments was becoming member-regulated. The board held discussions and heard public comment at a meeting in April, ultimately voting to move forward. In July, Cherryland Electric became regulated by its members for the first time in 40 years.

We used member regulation to raise rates in 2009, and while an increase is never pleasant, being member-regulated saved Cherryland—and you, as a co-op owner—over \$80,000 in costs we would have previously had to pay by applying for an increase before the Michigan Public Service Commission. Again, we held an open board meeting and took public comment, and this new process went as smoothly as the member-regulation campaign. The new rates went into effect in the fall and were helpful in maintaining a solid financial position at year's end.

Reducing Energy Use

We also gained momentum in our Energy Optimization (EO) goals. Energy Optimization is the nickname for Public Act 295, the state mandate that now appears on all electric bills. While not happy with this mandate, we took a positive attitude and attacked the energy-saving goals.

Happily, through the hard work of Cherryland employees, we achieved our EO goals in the residential and commercial sectors before many other utilities. We also kept costs

to a minimum and have used your money effectively and efficiently, which keeps the monthly charge lower.

Tony Anderson
General Manager

Record Annual Meeting

The June annual meeting was a pleasant surprise when we saw attendance double to nearly 1,700 people on another beautiful day at Wuerfel Park. Faced with long lines, again employees jumped into action and added more computers to the registration process to get people into the stadium quickly.

Member support at the meeting and positive comments after gave us a good mid-year boost to keep running in the right direction.

Looking Ahead

Having now turned the corner ever so slightly into 2010, we can see more important goals ahead. Our automated meter reading system capabilities will be expanded through a pre-paid metering pilot. This will be a limited metering trial wherein a member will buy a card that can be swiped through a device in the home. This will then put a credit on the home's electric meter and the participating member will simply watch the device to determine when more credit is needed.

No bills to worry about, mail to watch for, and no collection calls. The amount of credit to put on the meter and the time of the month to do so will be entirely up to the participant. We are hopeful it will work well for those members who wish to set their own payment schedule and frequency.

Many utilities who have tried this in other parts of the country feel that it is a good energy conservation tool. Members find themselves more involved in making their energy dollars last longer.

Other tasks before us involve offering a bylaw change to allow internet voting for director elections, rolling out an energy efficiency loan program called Michigan SAVES, pushing ahead with long-term power supply issues and trying to avoid a rate increase. There is always something to chase down. Sometimes it just takes a sprint and other times a marathon. We will keep running to keep “in the zone” for your benefit.

How The 'Smart Grid' Benefits Us

New technology makes life better for co-op members and employees. **Nick Edson**

Timing is everything. Just ask Crystal Mountain's Michael Call.

Call oversees Crystal's snowmaking process during the winter. Making snow during peak hours—from 5 to 10 p.m.—can be costly, as the Benzie County resort found out a few years ago.

Why? The peak demand for electricity—from 5 to 10 p.m. in the evening—is the time frame when people get home from work and get dinner ready, do laundry, watch TV, turn on their computers and other things before starting to wind down and go to bed.

The cost of electricity goes up during that time because Cherryland's electric supplier—Wolverine Power Cooperative in Cadillac—is buying power off the grid. It costs more to buy power during peak times than non-peak times, and it's all about supply and demand.

So, when Crystal Mountain was making snow during peak hours, their costs were substantially more.

When Call and Crystal president, Jim MacInnes, asked Cherryland what they could do to lower snowmaking costs, they got together with Frank Siepker, an engineer and Cherryland's operations manager, to come up with a solution.

Siepker installed a meter and website at Crystal Mountain to help the resort monitor the time of day they made snow.

"Instead of starting to make snow at 8 o'clock at night, we'd wait until 11 o'clock," Call says. "The savings were immediate and substantial. We don't always wait until later to make snow, depending on what Wolverine estimates will be the coincidental peak of energy usage for that month. But we use it as a guideline."

Now, Crystal Mountain and others receive a monthly report from Cherryland about their electric use and costs. And down the line, this time-of-day monitoring could be applied to residential units, too. Time-of-day monitoring at Crystal Mountain is a good example

of what the industry calls the "Smart Grid," and what it can do.

What is Smart Grid technology?

It's the combination of automation tools and two-way communication that helps electric utilities like Cherryland monitor its interwoven electric systems.

In other words, it's Cherryland's safeguard—from both a technology and financial point of view.

There are several other ways the Smart Grid benefits Cherryland members, Siepker says.

"Cherryland has two Smart Grid programs—AMR and SCADA," Siepker explains. "Many Cherryland members are familiar with AMR—automatic meter reading. The automatic meters relay information from their home or business back to our office in Grawn. Because of AMR, they don't have to go outside and read their meters in the winter... or anytime."

SCADA is an acronym that stands for Supervisory Control and Data Acquisition. It refers to a system that collects data from various remote locations and sends it to a central computer that manages and controls it.

Siepker said the National Energy Technology Laboratory recently identified the following characteristics of a Smart Grid:

- ▶ Self-healing from power disturbance events.
- ▶ Operates resiliently against physical and cyber attacks.
- ▶ Provides power quality for 21st century needs.
- ▶ Accommodates all generation and storage options.

Above and Cover: Cherryland Operations Manager Frank Siepker is pictured in front of the new Elmwood Township substation in Leelanau County.

- ▶ Enables new products, services and markets to benefit consumers.
- ▶ Optimizes assets and operating efficiency.

"Actually, the Smart Grid is different things to different people," Siepker says. "The definition and the scope of it is still evolving. But the bottom line is that it helps Cherryland to operate more efficiently and optimize the use of our present and future assets."

"All of the technology we apply to our distribution system to make information available to either us at Cherryland or our members on their computers is part of the Smart Grid."

Cherryland is "continually developing and expanding the scope of Smart Grid technologies," Siepker adds. The results of these improvements will mean shorter outages for members, identifying where problems are sooner, and getting crews to those areas quicker.

"The Smart Grid is all about better two-way communication," Siepker says. "And that translates to a safer, more efficient system for our members."

Carbon and Climate

Your "Comment" (Nov/Dec, 2009) does an excellent job of describing just how misguided legislation requiring an 80 percent reduction of GHG [greenhouse gas] emissions by 2050 is. I think an important point you missed is that technology cannot be invented by simply passing a law requiring it. Your examples show clearly that new technology is required. The current legislation is all about raising taxes, but does little to grow the technology required.

Once the technology is discovered that is economical compared to conventional energy supplies, then you can encourage it with tax policy. Legislation will only create winners and losers—but for sure will do it wrong or create other problems that are not knowable today. Ethanol and windmills show what

can happen to companies that invest in government-created industries without solid economics.

Dave Lamp, via email

The last paragraph of Mr. Peters' "Comment" says it all. We need nuclear generation plants, clean-coal fired power plants, and carbon capturing technology. Without these new and improved old technologies, the American taxpayers will eternally be paying billions of \$\$\$\$ in taxes and user fees.

*Lou Schomberger,
Pellston/Paradise*

Unfortunately, a large number of people have been misled by the threat of "global warming/climate change." For those who believe in this theory should view the documentary, "Not Evil Just Wrong." It provides a balance to this theory. Mackinac Center reports that the U.S. Energy Information Administration found that, "emissions here have been better controlled than in other countries," even by those who signed the Kyoto Protocol. "Carbon dioxide emissions

from the burning of fossil fuels only increased by 0.7 percent in the U.S. from 2000 to 2006, compared to 27.7 percent in India, 45.8 percent in Malaysia, and 103 percent in China."

Requiring the U.S. to drastically reduce carbon dioxide emissions without support for the same around the world puts the U.S. at a great disadvantage in the world economy.

Max Binkley, Williamsburg

I thought I'd do a little research of my own. To meet the 2050 goal we would have to eliminate all modes of transportation, all power generation, our complete economy, and about 20 percent of our current population. Our current CO₂ content in the atmosphere is 500 percent less than it was during the days of the dinosaur.

Looking at the real data and not selected sets of data, maybe we need to start looking at other causes of global warming. One may be that the alkalinity of the oceans is rising, causing the water temperatures to rise and the CO₂ levels to decrease. What is the cause of the increased acidity in the oceans? We all know the oceans are the reason for temperature moderation around the world. As water temperatures increase, so does the air temperature. Maybe we have the whole thing backwards.

Jim Capehart, DeTour

Survey Winners

Congratulations to Cherryland Electric co-op member James Heisenfeldt for winning the top prize of a 40-inch LCD TV in this magazine's reader survey, conducted in November. Survey results, to be shared in future issues, will be used to improve the magazine.

Volunteer Nominee

Hooray for Pauline Hancock, she takes great care of homeless animals.

Barbara Petersen

Thanks for the Recipe

Just want to thank one of your contributors for a recipe: Glenda Wuori of Hancock for Banana Salad. My mother is on the Memory Floor at a nursing home and they are having a Christmas supper. The guest is to bring a favorite dish of the person. I asked Mom what she would like and she said, 'Banana Salad.' I remember her making it, but it was not something I cared for and never paid much attention to it. After searching, I finally found this recipe, and I am sure this is it. Please thank her for me.

Sharon Tob, via email

Wild Blueberries

Jim Hough's article about Bill McNamara, nominating him

MYSTERY PHOTO

Everyone who identifies the correct location of the photo below by **Feb. 10** will be entered in a drawing for a **\$50 coupon redeemable for electricity from your electric cooperative.**

Call in your entry to *Country Lines* at 517-351-6322, ext. 306, email jhansen@countrylines.com, or mail it to *Country Lines*, 2859 W. Jolly Road, Okemos, 48864. Include your name, address, phone number and co-op. The winner will be announced in the March 2010 issue.

The **Nov/Dec** contest winner is **Myrna Smith** of Walkerville, who correctly identified the South Pier Light in Pentwater, featured in the Nov./Dec. issue of *Country Lines*.

Scholarships Offered

Each year, the Michigan Electric Cooperative Association awards two \$1,000 scholarships to qualifying applicants. Individuals are chosen based on their scholastic achievement and extracurricular involvement during their high school career.

The applicant's parent or guardian must be a member or employee of a Michigan electric co-op, and the applicant must be planning to attend a Michigan college or school full-time.

Selection will be based on grade point average, character, leadership, academic achievement, extracurricular and community activities, and essay response.

Applications are available at countrylines.com; click on "Youth," email wolford@countrylines.com, or call 517-351-6322, ext. 205, to request an application by mail. Eligible applications must be postmarked by *April 1, 2010*.

as Wild Blueberry Hero, was a great story. That he picked 250 quarts and can still stand and walk is phenomenal! I would like to nominate another man as "My Blueberry Hero."

He first is my hero because he was a 101st Airborne paratrooper in WWII. He jumped into Normandy on June 6, 1944. He trucked into Bastogne, Belgium, and went on to the Eagle's Nest in Austria.

George Koskimaki spends his summers in the U.P. and picks blueberries when they are ready. He gives most of them away, bringing them downstate where many are baked into pies at his church. Last year, George picked 230 quarts. He recently told me, "The berries were a bit smaller this summer, so I only got 170 quarts." George is 87, and he jokingly added, "I slowed a bit on picking too, because I had to carry my lawn chair into the berry patch so I could sit while picking."

Charles Day, Lambertville

I so enjoyed the article "My Blueberry Hero" in the Nov/Dec 2009 issue. It is heartwarming and encouraging in these stressful times to read about folks like Mr. McNamara, and I appreciate Mr. Hough's articles. I always enjoy checking out the recipes, too. Thanks for your magazine.

Deanna Williams, Cheboygan

CFLs & LEDs

I like the idea of the LED lights, and plan on purchasing some this year. I wonder though, what is the average life span of each individual light?

Simone Smith, via email

Unlike incandescent bulbs, which die when the filament breaks, LEDs gradually dim over time. The lifespan of an LED is rated as the point where lumens drop to 50 percent of the original output. A typical LED could last 8 years, based on 4 hours of use per day.

Why don't we use the lumen as a means of light intensity rather than watts? Currently we are given the comparison of light emission from an incandescent lamp at so many watts to a CFL, say, at a lower wattage rating. When I place them side-by-side, the CFL reported xxx wattage equivalent of the incandescent lamp is no where near as bright as the incandescent.

I think there is some fudging by the industry here. We don't traditionally see incandescent lamp output given in lumens. We just see how much energy it consumes.

William Felmlee

Many brand name manufacturers do include light output on the packaging, not the bulb. -ed.

Co-ops & Rates

The Nov/Dec issue had a letter from George Wellman that needs to be broadcast, and hopefully embraced, by all utility companies across America. An excellent place to start is the non-profit co-ops. A co-op's mission is not only to serve it's customers with affordable electric service but also, as *Country Lines* demonstrates, to keep it's members informed and up to date on public policy concerning energy. Over the last couple years, the single issue obtaining the most press has been our growing energy dependence and the direct conflict created by the mounting evidence, and growing public concern, with global warming.

So what is Mr. Wellman's brilliant idea that we should encourage our co-op to embrace? Quite simply, [it's] adjusting [rates] to reward less consumption vs. more. All utility companies I have known use a graduated scale of pricing that rewards more consumption: The more you consume, whether it's city water, natural gas, or heating oil, the less you pay per unit

Cap-and-Trade Economics 101

Under a cap-and-trade system, major sources of carbon dioxide emissions would have to account for them with "allowances," or permits, issued by the federal government. Colorfully named cost control proposals could keep allowance prices—and electric bills—from skyrocketing.

*Legislators could mix-and-match from the options below;
The top two options would best protect electric co-op members*

Safety Valve

Establishes an unlimited pool of federal allowances available at a set price. The set price would remain stable every year to guarantee a worst-case, maximum "cap" on costs.

Price Collar

Similar to a safety valve, but sets a maximum and minimum price for carbon allowances. In an allowance auction, bidding would start with the minimum price.

Strategic Reserve

A small percentage of allowances would be skimmed from future years' allotments and set aside. Emissions sources needing extra allowances could buy them from this pool.

Emergency Off-Ramp

If a certain trigger is reached (for example, prices for allowances skyrocket to predetermined amount) the entire cap-and-trade program stops.

Throttle

If a certain, predetermined trigger occurs, the cap (which is lowered over time) could be lowered at a faster or slower rate.

Banking and Borrowing

If allowances were cell phone minutes, banking would be equivalent to rollover minutes: unused allowances could be carried over to the next year.

Borrowing would allow an emissions source to borrow allowances from what it would otherwise use the next year.

Source: National Rural Electric Cooperative Association

of consumption. Ironically, increased consumption generally leads to increased rates for everyone. That calls into question the "use more, pay less" fee schedules that are in place.

Such changes are always easier stated than implemented, but I have little doubt that—with enough public support, and perhaps allowances for a few exceptions to the rule that may be required (i.e., homes that use electric heat in the winter)—management at our co-op can help us achieve this.

[This change] will issue a new era of heightened awareness towards consumption, rewarding those who choose to conserve rather than to consume. It will help keep energy affordable for all, while also helping preserve our planet for future generations.

I feel so passionate about making this concept a reality,

I'd like to VOLUNTEER my own services to help.

Jason Vallier

Beautiful October

Mother Nature "lives" near the south end of Sugar Island, near Sault Ste. Marie.

[This] photo taken of our son's cabin provides elaborate proof that, "Yes, Mother Nature lives nearby," and from all indications has an elaborate crew of talented assistants. The end result of Her recent special endeavor is profoundly breathtaking.

Eileen Hughes, Sugar Island

Our Bill And Your Bill

In late November our energy use advisor, Bill Garey, retired after 33 years at Cherryland. Bill is a good friend and I will miss him, although his beaming smile and the extra skip in his step proclaiming his approaching retirement were starting to wear thin: Call it jealousy on my part.

It was Bill who opened my eyes to energy conservation. You see, Bill advocated energy conservation long before it became trendy and political. He was a graduate of the “waste not, want not” school of thinking.

Bill Garey

So with Bill in mind, I embarked on my own energy conservation journey. It didn't start out well—my first purchase was a CFL (compact fluorescent lightbulb), which several years ago cost around \$9. That was a lot of money for one light bulb.

But there was really no choice since Cherryland was starting to promote CFLs and, like Bill, I had to “walk the talk.” So, back at my house, 20 minutes after buying the CFL, I dropped it on the hardwood floor—\$9 wasted!

Today, my house has CFLs in almost every fixture. There are also some LEDs (light emitting diodes) sprinkled here and there and some LEC (light emitting capacitor) night lights (cool-to-touch, low-cost—see limelite.com), as well. One of my favorite tricks is to mix globe CFLs with globe LEDs in the bathroom light fixtures by the mirrors.

Until the CFLs warm up, it's a little dim but the energy saved is worth the temporary inconvenience; and besides, the LEDs

just look cool.

The next point of attack was to add insulation in the basement and seal some exterior and interior doors. After that, I replaced our very old refrigerator with a new Energy Star® model. Lastly, and just as important, my family became more conscious about saving electricity during this process.

Best of all, the changes made a difference on my monthly electric bill. With my energy use trending downward for the fourth consecutive year, the savings is around \$13 per month.

Another lesson learned along the way is that you never run out of ways to save energy. When this journey started, my daughters were pre-teens. Now they are older and “require” much longer showers.

Recognizing a potential losing battle, I insulated the hot water pipes along with encouraging them to spend less time in the shower. Much to my surprise, the insulation really seems to make a difference at the faucet. As for the shorter showers, we are still working on that.

Even with Bill's retirement, Cherryland Electric Cooperative remains committed to helping you save energy.

Tammy Squires is now promoted to the position of energy use advisor, and like Bill, she has a passion for saving energy. If you have a question for Tammy, please call her at 231-486-9261 or email her at tammys@cecelec.com.

Kevin Cragg is member services manager at Cherryland Electric Cooperative.

Ways to Save Energy This Winter

- ▲ Place plastic on windows and unused doors (egress doors must remain clear for safety).
- ▲ Add door sweeps and weatherstripping to doors (a rolled blanket or towel will work as a door sweep).
- ▲ Use spray foam to seal around pipes, under sinks, and around the box sill in the basement.

- ▲ Make sure all windows are locked (this seals the window) and all storm windows are in place and sealed.
- ▲ Caulk leaking windows from the inside (air infiltration is a major factor in the cold drafts you feel in your home).
- ▲ Turn down the thermostat—just a few degrees can save you big money.
- ▲ If you are cold, put on a sweater—you will feel cozier and be healthier in the long-run because the ambient air won't be so dry.
- ▲ Replace all your light bulbs with compact fluorescent lightbulbs (CFLs). This can reduce your electric bill by up to 75 percent.
- ▲ Check to make sure the seals on your refrigerator and freezer are clean and sealing properly. If you have one, clean the grill on the back of your refrigerator. This will make it operate more efficiently and save energy!
- ▲ Add pipe wrap to hot water pipes.
- ▲ Have your furnace and water heater inspected annually; this will ensure they are operating safely and efficiently.
- ▲ Turn the water heater down and take shorter showers (anything over 5 minutes affects your bill).
- ▲ Replace your shower head with a low-flow shower head.
- ▲ Turn off lights and “entertainment centers” when no one is in the room.
- ▲ Unplug unused appliances, stereos, TVs, etc., when not in use.
- ▲ Do not try to heat your home with a gas cook stove—it's very dangerous and expensive.

NOTICE OF FEE CHANGE

Controlled Heating Program

Effective Jan. 1, 2010, Cherryland Electric Cooperative will be charging the following construction fees to members wanting to participate in our Controlled Heating program:

New construction – \$275
Existing facility upgrade – \$425

For details, contact the Cherryland office at 231-486-9200

NOTICE OF PROGRAM CHANGE

Marathon Water Heater

Effective Jan. 31, 2010, Cherryland Electric Cooperative is discontinuing the \$250 Marathon water heater rebate program. A new water heater rebate program will be announced in the near future.

Deal With Carbon In Congress, Not EPA

Regulating carbon through congressional action is better than relying on the EPA.

Federal curbs on emissions of carbon dioxide, a greenhouse gas blamed as a principal cause of climate change, are quickly becoming a reality. It's just a matter of which government branch gets there first: legislative, executive or judicial.

In December the U.S. Environmental Protection Agency (EPA), part of the executive branch, declared that six key greenhouse gases, including carbon dioxide, are endangering public health and welfare. Emissions from motor vehicles comprise four of those greenhouse gases (including carbon dioxide), which are also said to contribute to dangerous air pollution under this "endangerment finding." The EPA's "endangerment finding" puts a "foot in the door" for it to promulgate sweeping new regulations that could impose strict limits on carbon emissions

from power plants, driving up consumer electric bills. This is clearly something that was not considered in 1970, when Congress implemented the "Clean Air Act" (CAA), created the EPA, and gave it the primary role in carrying out the new law. At the time, carbon dioxide wasn't considered a pollutant, so the law and regulations that followed were not drafted with it in mind. Michigan Congressman John Dingell, who helped write the CAA, said that if the EPA moves forward to regulate carbon dioxide under the CAA, it will "be a glorious mess." We can't agree more.

Electric co-ops believe that any controls on carbon dioxide should be established by Congress, where the impact of these proposals can have a full public debate. Unfortunately, a climate change bill passed by the U.S. House last summer (H.R. 2454), and another reported by the U.S. Senate Environment and Public Works Committee in November (S. 1733), include unachievable goals and timelines for reducing carbon dioxide emissions, inadequate technology development incentives, and no guarantee that electric bills will remain affordable. Current proposals will unfairly penalize consumers in fossil fuel-dependant states by saddling them with higher bills to essentially subsidize and lower electric bills for those in other regions. Our Senators Carl Levin and Debbie Stabenow recently signed a joint letter with 12 other senators

Michael Peters is president and CEO of the Michigan Electric Cooperative Association. His email address is mpeters@countrylines.com.

questioning the formula that was adopted by the Senate committee, calling it "unfair to Michigan."

We have taken the position that any climate change legislation should protect consumers and preempt use of the federal Clean Air Act and any other existing laws. Otherwise, utilities and businesses could be burdened with the task of trying to comply with more than one set of regulations.

On the judicial front, two federal courts of appeal have allowed lawsuits to proceed against different groups of utilities. The lawsuits claim that emissions from the utilities' coal-fired power plants have contributed to climate change, causing damages to the environment or property. The cases have a long way to go, but with the courts getting involved we now have all three government branches racing to see which one is first to regulate carbon dioxide and other greenhouse gases.

While we may not like any one of these "winning the race," the fact remains that we will see regulation—probably sooner rather than later. All we ask is that if Congress wins the race, they simply not add new legislation on top of old regulations. Any climate change bill should become the road map—the single strategy—for reducing carbon dioxide emissions at federal, state and local levels.

Our position from the very beginning of this debate has been that any climate change policy goals adopted be fair, affordable and achievable. We only hope that whatever branch of government gets to the "finish line" first hears us.

To make your voice heard in this debate, join NRECA's "Our Energy, Our Future™" grassroots awareness campaign at ourenergy.coop. To date, more than 600,000 of your fellow co-op consumers across the country have done so.

Electricity Remains a Good Value

Electricity continues to be a bargain, especially when compared to other consumer goods. In the face of increasing price pressure from carbon regulation and worldwide demand for energy, your electric cooperative is committed to providing safe electricity at the lowest possible cost.

Average annual price increase over the past decade:

Lighting the World

Co-op efforts deliver power and hope to over 100 million people across the globe. **Megan McKoy**

As electric co-ops celebrate 75 years of providing affordable electricity for rural Americans, another story unfolds globally. Volunteer lineworkers from electric co-ops across the nation are spreading rural electrification overseas, sharing light and hope with war-torn or forgotten communities.

“When I told my daughter, Katie, she couldn’t believe some places in the world don’t have electricity,” relates Craig Larkin, a lineman from Troy, MO-based Cuivre River Electric Cooperative who spent several weeks lighting up Yei, a city in war-torn Southern Sudan. “If we can help them out, that’s an awesome thing.”

The lineworker efforts are coordinated by NRECA International Programs, a division of the National Rural Electric Cooperative Association. Since the program was established in 1962, over 100 million lives in more than 40 developing nations have been empowered with access to safe and reliable electricity. Funding for this global goodwill effort comes in part from the NRECA Inter-

national Foundation, a registered charitable organization partnering with electric cooperatives in the United States and others to bring power and economic development to rural villages overseas.

Michigan co-ops support the Foundation with monetary contributions. They include Cherryland Electric, HomeWorks Tri-County Electric, Midwest Energy, Wolverine Power Marketing, and the Michigan Electric Cooperative Association.

NRECA International Programs doesn’t simply bring American lineworkers into a country for a few weeks and then pull up stakes. Staff members and volunteers teach locals how to build and maintain simple power grids and run their own utilities.

“The ultimate rewards we see are the long-term benefits,” explains Ixcan, Guatemala, volunteer Chris Stephens, manager of engineering for Palmetto, GA-based Coweta-Fayette Electric Membership Corporation (EMC). “We’re not only providing a service, we’re providing expertise and best construction practice skills by sharing information

and technologies from our linemen to their linemen. They may not speak the same language, but they speak the same work.”

The initiative also introduces folks to the co-op business model and shows them what electric power can do for schools, health clinics, farms and local economies. But the job’s far from over. Today, these NRECA projects are under way in Bangladesh, Republic of the Philippines, India, Bolivia, Haiti, Senegal, Dominican Republic, Costa Rica, Southern Sudan, Yemen, Nigeria and Guatemala.

Valued Volunteers

For American lineworkers, volunteering overseas provides a crash course in old-school line-building techniques. Without access to bucket trucks in most locations, linemen manually climb up and down each utility pole to work on wiring—and that’s after each pole, weighing as much as 2,000 pounds, has been set upright in the ground.

Before that work begins, deep holes for the poles are dug by locals. Then the poles are unloaded by hand and carried to their new

Singing River Electric Cooperative linemen show locals in Jalapa, Guatemala, how to use modern technology to manage an electric grid.

Source: NRECA International

homes. Simply lifting, or “piking,” the pole to place it in the hole—something done by utility trucks in the United States—takes a large group of men, all pushing and working together to lift the heavy burden in unison.

Many American volunteers, upon finding local linemen lack even basic climbing gear and tools, leave personal equipment behind when the work's done.

“It's a life-changing experience to be part of something like this, giving somebody power who's never had it before and doesn't realize what it can do for their life,” notes Bobby Ball, a lineworker from Pahump, NV-based Valley Electric Association who also volunteered in Yei. “It's an overwhelming feeling of joy, it really is.”

Poles, Lights, Action!

Electricity evolved in America from a luxury to an essential part of American life during the last century. Yet more than 2 billion people around the globe still live without power—64 million in Latin America, 500 million in Africa, and more than 1 billion in Asia.

Of course, folks in distant lands use far less electricity than the 916 kilowatt hours (kWh) consumed each month by the average U.S. household, a pattern similar to how rural Americans responded when the “lights first came on” in the 1930s and '40s. In September 2009, for example, the typical rural consumer in Bangladesh used 71 kWh of electricity—just enough to power a single 100-watt light bulb for a month.

But internationally, every kilowatt counts.

“I volunteered to experience seeing people the first time they get electricity,” says Monroe, GA-based Walton EMC Lineman Keith Kirk, who volunteered in Ixcán, Guatemala. “The excitement of running power lines down a road and watching people come out of huts, they couldn't wait for us to energize the lines so they could hook up. It makes their quality of life a little better.”

According to NRECA International Programs, reliable electricity strengthens communities by providing better educational opportunities and increasing safety. Access to power also paves the way for progress in a community, giving small business the boost needed for success.

“It was a humbling experience, to see people and the way they lived compared to what we have,” recalls Clarksville, GA-based Habersham EMC Lineman Craig Carlan, who also worked in Guatemala. “I felt real

NRECA International Programs: Lighting the World

NRECA International Programs and volunteer linemen are building electric distribution lines in Bangladesh, Bolivia, Costa Rica, Dominican Republic, Guatemala, Haiti, Nigeria, Philippines, Senegal, Southern Sudan, and Yemen. As this map shows, co-op linemen are working around the world to provide power.

Did you know?

More than 2 billion people live without electricity—64 million in Latin America, 500 million in Africa, and more than 1 billion in Asia.

good about what we had accomplished. In the village we electrified, kids will have the opportunity to get a better education. They have dreams too, just like we have dreams. Maybe they can set higher goals now.”

Rewarding Results

NRECA International Programs has played a critical role in the electrification of rural Bangladesh, where there are now 70 co-op-like utilities. More than 40 million consumers in 85 percent of the rural villages dotting that South Asian nation boast lights and 1,000 new connections are made every day—bringing a brighter future to thousands more.

“Electrifying farms has had a huge social and economic impact, including a third rice crop annually,” Habib Ullah Majumder, chairman of the Bangladesh Rural Electrification Board points out.

The Republic of the Philippines, where rural electric co-ops were first launched in 1970, now boasts 119 co-ops. In Bolivia, NRECA and a North Carolina co-op helped start what has become the largest electric co-op in the world. And wherever it goes, NRECA International Programs promotes energy efficiency and renewable energy resources such as solar power, biomass and micro-hydro.

Helping Hands

Many of the projects undertaken by NRECA

International Programs—which is comprised of two distinct entities: NRECA International, Ltd., and the NRECA International Foundation—are funded through the U.S. Agency for International Development (USAID). Other financing partners include the World Bank, U.S. Department of Agriculture, Asian Development Bank, and Inter-American Development Bank.

Local electric cooperatives across the United States have contributed funds, bucket trucks, line construction equipment, and hand tools through the NRECA International Foundation. Many have also sent volunteers overseas to train foreign utility workers, organize co-ops, and build power lines. Some co-ops band together to help communities in a specific nation; Georgia lineworkers routinely volunteer in Ixcán, Guatemala, and several teams of Missouri lineworkers have assisted ongoing work in Yei.

Despite widespread support, NRECA International Programs needs help to continue bringing electricity to the world, one village at a time. To watch videos of lineworkers volunteering across the globe or to make a donation supporting the program, visit NRECAFoundation.coop.

Megan McKay writes on consumer and cooperative affairs for the National Rural Electric Cooperative Association. Frank Gallant also contributed to this article.

The EPRI Prism: Decreasing carbon dioxide emissions by 2030

If adopted nationally, recommendations in eight technology areas would allow electric utilities to slow, halt, and eventually decrease carbon dioxide emissions by 2030 while still supplying safe, affordable, and reliable electricity.

U.S. Energy Information Agency (EIA) 2009 Base Case

TECHNOLOGY	EPRI PRISM HIGHLIGHTS
End-Use Efficiency	8 percent additional reduction in consumption
Transmission & Distribution Efficiency	20 percent reduction in system transmission and distribution line losses by 2030
Renewable Energy	15 percent of total generation by 2030
Nuclear Power	No plant retirements; build 64 GW (roughly 45 new plants) by 2030
Fossil Fuel Efficiency	Increase of 3 percent in efficiency of existing coal-fired power plants by 2030
Carbon Capture & Storage (CCS)	All coal and natural gas-fired plants built after 2020 to capture 90 percent of carbon dioxide
Electric Transportation	Put 100 million plug-in hybrid electric vehicles on the road by 2030
Electrotechnologies	Replace 4.5 percent of industrial fossil fuel-fired furnaces, etc. with electric models by 2030

U.S. Electricity Sector CO₂ Emissions

(million metric tons)

Source: Electric Power Research Institute

A Diverse Solution for America's Energy

Congress has been debating climate change legislation for months. Now the U.S. Environmental Protection Agency has begun gearing up for its own possible set of regulations to slash emissions of greenhouse gases like carbon dioxide, which is blamed for contributing to global warming. With more than 70 percent of our nation's electricity coming from greenhouse gas-emitting fossil fuels like coal and natural gas, the question becomes: how to reduce emissions while still making enough electricity available?

For the past several years, the Palo Alto, CA-based Electric Power Research Institute (EPRI) has been working on an answer. EPRI, which includes electric co-ops as members, recently released an updated set of possible remedies that could meet our energy needs while dramatically reigning in carbon dioxide emissions over coming decades.

Called the "EPRI Prism" after the broad spectrum of solutions described (and resulting colorful graphics tracking emissions cuts associated with each), the proposal consists of recommendations in eight technology areas that, if adopted

nationally, would allow electric utilities to slow, halt and eventually decrease carbon dioxide emissions by 2030 while still supplying safe, affordable and reliable electricity.

The eight components are: boosting end-use energy efficiency; making transmission and distribution system lines more efficient; improving the operating efficiency of fossil fuel-fired power plants; investing in renewable energy; expanding nuclear power capacity; capturing and storing carbon dioxide produced by coal-fired power plants; deploying electrotechnologies, like arc furnaces, for industrial and commercial use; and putting plug-in hybrid electric vehicles on the road.

The key involves utilizing all technologies together, with each doing its part to reduce emissions. Failure to maximize any of the eight technologies in the "full portfolio" will dramatically jack up the cost of achieving climate change goals, according to EPRI.

"There just isn't going to be a free lunch," remarks Revis James, director of EPRI's Energy Technology Assessment Center. "If this type of policy is actually

implemented, it's going to cost money, even in an efficient scenario."

Assuming the full range of carbon-curbing technologies are up and running by 2050 (the target date being discussed in congressional climate change proposals), EPRI pegs the real wholesale cost of electricity to increase 80 percent. But continuing business as usual under tightening carbon dioxide emissions restrictions would spike wholesale power costs more than 210 percent.

Diversifying the nation's generation fuel mix could lead to major savings down the road. Employing the full EPRI Prism, as opposed to relying on a few, less technologically advanced resources, will slash the impact on the nation's economy by more than \$1 trillion.

"Policymakers need to be made aware that the full portfolio carries a lower cost overall to the economy than a more limited approach," James stresses. "Heading in that direction clearly is in our national interest."

Scott Gates writes on consumer and cooperative affairs for the National Rural Electric Cooperative Association.

Building Tomorrow's Co-op Leaders

A Hesperia Girl Scout troop earns the "Co-ops for Community" patch. **Jan Tableman**

After they shared stories of "who said what to whom" at school and giggled a lot, the Senior Girl Scouts of Troop 20412 got down to business—cooperative business, that is.

The eight girls earned their "Co-ops for Community" patch by completing 10 of 14 requirements related to the cooperative business model over four weeks in November.

"I learned what a co-op is and how they are run," Mariah Walzer, 15, says. "It's interesting how some businesses use the seven cooperative principles."

Sponsored by the National Cooperative Business Association and Cabot Creamery, a dairy cooperative in Vermont, this patch program is designed to help girls become more business savvy, appreciate the advantages of cooperatives, understand how cooperatives contribute to their communities, and develop their business leadership skills.

After learning about electric co-ops, food co-ops, housing co-ops, credit unions and more, the girls compared the Seven International Cooperative Principles to the Girl Scouts Promise and laws. Characteristics common to both groups include open membership and concern for community.

"I learned how co-ops work to help their communities, just like we do," Nicole Thompson, 15, says.

To fulfill one patch requirement, the girls created thank-you posters to recognize Great Lakes Energy members for their contributions to the community through the co-op's People Fund. Another requirement resulted in the production of a board game, "Co-opland."

"It's like Candyland," Jessica Hall, 14, laughs. "You draw a card that has a question about co-ops on it. If you answer it right, you get to move ahead to the colored space listed on the card. If you don't, you have to go back."

The girls' most daunting task was to

draft their own co-op on paper. Troop 20412 created the Girl Scout Cookie Co-op, complete with logo, budget, membership guidelines, goals and more.

Cookie sales will begin this month, and the girls decided to donate any profits they make to their school.

"These girls are very creative," Troop Leader Shanon Buozis says. "They recently completed the Silver Award, which took them two years to earn."

The Silver Award is the second highest award in Girl Scouts. The troop's final project required each girl to make a blanket to donate to the Linus Project for children who are seriously ill, traumatized, or otherwise in need of support. Many of the girls made two blankets.

The girls began as Girl Scout Daisies when they were in kindergarten. Buozis has been one of their leaders since second grade. The troop is part of the Michigan Shore to Shore Council out of Grand Rapids.

"Shore to Shore has only been in existence for a little over a year," Buozis explains. "In August 2008 four Girl Scout councils merged to help centralize operations and reduce costs."

The merger was part of the new core business strategy which Girl Scouts USA began implementing in 2004 to better accommodate the changing needs of girls in American society. The new strategy includes changes to the uniforms, programs and the structure of the organization itself.

Today, the Michigan Shore to Shore Council serves over 20,000 girls, ages 5-17, in 30 west and northern Michigan coun-

WIN FREE GROCERIES FOR A YEAR!

Visit FarmersFeedUS.org

MICHIGAN'S FARMERS OFFER "FREE GROCERIES FOR A YEAR!"

What is the Farmers Feed US Program?

Farmers Feed US is a program encouraging Michigan citizens to meet and engage with the farmers of Michigan who grow their food.

What is at the FarmersFeedUS.org website?

FarmersFeedUS.org offers Michigan consumers the chance to register to win \$5,000 in "Free Groceries for a Year" while also meeting Michigan farmers and touring their farms.

Who is sponsoring this program in Michigan?

This program is supported by the soybean, beef, egg, corn, sheep, pork, dairy, apple and vegetable farmers of Michigan who are eager to show the consumers of Michigan how we work to produce safe, affordable, nutritious food each and every day.

How long is the program running in Michigan?

The program launched Nov. 16th and runs for three months through Feb. 12, 2010. That gives the consumers of Michigan a lot of chances to register to win. People can register once with each Michigan farmer per day – that's 10 possible chances per day for up to 90 days!

"As Michigan farmers, we're thrilled to offer free groceries for a year to the consumers of our great state. This is an opportunity for us to share our values with the consumers - taking care of our families, taking care of our animals and land, and giving back to our communities."

Ed Cagney, soybean farmer, Scotts, Michigan

It's January. Got bills?

As inevitable as snowstorms, December's generosity has once again ushered in a whole stack of January bills.

Of course, smart shoppers spend only what they have on holiday gifts, and they don't use credit cards to do it. Smart shoppers don't drop \$25 for a battery powered figurine of Winnie-the-Pooh either, even if it does play recorded Christmas music and light up my granddaughter's eyes when she powers it up... over and over and over.

So maybe I'm not a smart shopper, but even I know enough to charge only what I can pay back in January. Not all families can say that.

Even if you don't face a stack of unpaid statements, January might be a perfect time for the whole family to brush up on financial literacy skills.

Financial Literacy Important At Any Age

According to the Harmony Financial Network, financial literacy is the knowledge, skills, and ability to make wise decisions about financial matters—how to earn, save, spend and invest money. It is about making informed, thoughtful decisions about finances that will lead to success, security and self-sufficiency.

The Michigan Jump\$tart Coalition, among others, believes that increased financial literacy among our citizens is the key to preventing a repeat of today's national financial crisis—a crisis they believe was caused in large part by our citizens making unwise decisions with regard to credit cards, mortgage debt, savings and investments.

The Coalition also believes that the best time to teach financial literacy is during childhood. They are working toward ensuring that all our kids have access to personal finance education in order to develop the necessary skills to be financially competent when they graduate from high school. They are making some progress, too.

In December 2008 they helped pass a law that allows for a semester of financial literacy to count as one credit of math toward high school graduation. Now, the Michigan Jump\$tart Coalition is supporting legislative efforts to make such courses mandatory or

to allow them to count towards meeting the state's Michigan Merit Curriculum.

Put Money In Its Place

Arun Abey, a former investment strategist and author of the book "How Much is Enough?" believes that teaching kids to be smart about finances early will help protect them now and in the future. To that end, he offers some basic tips for families.

Don't Let Money Be Invisible – Working-class families during the Great Depression routinely set jars out in full view of the family marked "Rent," "Food," "Clothes," and so on, showing everyone where the money went. Today, money comes out of ATMs, and is spent via debit cards and credit cards – invisible to kids as to where it comes from and where it goes.

Give Kids Responsibility for Spending – Place children in charge of their optional spending. If they receive an allowance, require them to map out the money they have coming and also where it goes. Seeing it on paper or in a computer chart will give them a sense of reality about their money, and also build healthy financial habits.

Teach the Power of Investment – Help children set up a savings or investment account, but don't stop there. Spell out the value of their investment. For example, a simple investment of \$100 in a basic savings account can result in a balance of \$12,000 after 20 years. If they invest that same \$100 in a bond or a stock that returns merely 6 percent a year, that balance grows to \$42,000-plus.

For Love or Money? – Many families try to direct their children toward high-earning or high-status careers, such as medicine, law or business management. However, there is an alternative method, which directs children toward career paths that stress what they love to do. Ask your kids what they are passionate about and what they are good at. The answers to those questions will lead to a better quality of life than one centered on the pursuit of wealth.

"It's not easy to say that money isn't everything in a recession, but it isn't," Abey said. "If we leave out the part about lasting fulfillment, we're shortchanging them."

Abey's last point makes me feel better about

Photo – Realdealphoto.com

paying the bill for my singing Winnie-the-Pooh. How do you measure the value of wide-eyed wonder? What price do you put on the motivational power it leveraged? ("We'll make Pooh sing after your nap!")

Maybe a little toddler kitsch is worth the memories it makes. And maybe I'm a smart shopper, after all.

Resources That Can Help

- *Michigan Jump\$tart's Monthly Newsletter* – Helps educators promote financial literacy among youth. Subscribe or read issues at mijumpstartcoalition.org.

- *"How Much is Enough?"*, by Arun Abey, Greenleaf Book Group Press (2009, howmuchisenough.net). Guides readers through a holistic approach to financial planning, based on money being only one element in the overall chemistry of a happy life. An online quiz helps viewers discover, "Can money make you happy?"

- *"Tips for Parenting in a Commercial Culture,"* by New American Dream. Call 877-68-DREAM or visit newdream.org. A 32-page booklet packed with tips and resources to help parents deal with the effects of advertising and marketing on children.

Did you know?

- 60% of teens say learning about money management is a top priority.
- When asked about concerns parents have for their children's futures, parents rank developing good personal financial skills and being able to handle money (74%) ahead of both following the wrong crowd (58%) and drug/alcohol use (56%).
- Only personal safety ranked higher with parents.

NEW FOR 2010—FREE JUMPSTART KIT!

Nutrisystem® | D™

Clinically tested to lose weight, which helps lower blood sugar and control type 2 diabetes.

Sweet Cinnamon Bun

Homestyle Chicken Salad

Savory Lasagna

Decadent Fudge Brownie

With our **diabetic program**, Nutrisystem D, losing weight so you can help control your diabetes is easier than you think! Choose from **over 100 delicious foods—over 20 NEW**—including pizza, pasta, burgers, even chocolate! Nutrisystem D is a **low-Glycemic Index** program full of **good carbs and fiber** to help keep you feeling fuller longer. It's smart, sensible weight loss for people with diabetes, and a great value!

Support at your fingertips:

- **FREE** round-the-clock phone access to weight loss coaches
- **FREE** online membership including weight loss tips, tools and menu planning
- **FREE** live chat sessions with registered dietitians
- **PLUS! FREE** delivery straight to your door†

• **NEW! FREE BONUS JUMPSTART KIT** featuring:
NEW FlavorFulfs™ fiber drinks, personal weight loss coaching, Quick Tips, & 24/7 hotline!

Clinical Study Shows††— On Nutrisystem D, people with type 2 diabetes who wanted to lose weight:

- ✓ Lost up to **16 times more** weight
- ✓ Lowered blood sugar levels **5 times more**
- ✓ Lowered A1C by **0.9%**
- ✓ Lowered total cholesterol level by **20.9 mg**
- ✓ Lowered triglycerides level by **42.7 mg**

†† In a 3-month clinical study at Temple University School of Medicine and published in the *Journal of Postgraduate Medicine*, Nutrisystem program participants lost an average of 18 lbs., and lowered fasting blood sugar levels from 149.5 to 115.2, compared to those following a diabetes support and education program, who lost 1.3 lbs, and lowered fasting blood sugar levels from 151.4 to 144. Not all menu items were included in the study. Study funded through an unrestricted educational grant from Nutrisystem.

All for as low as \$3 a meal†

LOBSTER

The two types of lobster found in the United States are the northern lobster, which is the basic lobster found on the East Coast, and the spiny lobster, found off the coast of Florida. Find many more recipes at countrylines.com.

Lobster Bisque

6 T. butter, divided
1/2 c. finely chopped fresh mushrooms
1/2 c. finely chopped onion
1/2 c. finely chopped celery
1/2 c. shredded carrot
1 15-oz. can chicken broth
1 lb. lobster meat, real or imitation
1 t. sea salt
1/4 t. cayenne pepper
3 c. heavy cream
3 T. flour
4 oz. cooking sherry
paprika

(Pictured above)

Melt 3 tablespoons butter in a large saucepan over medium-low heat. Add mushrooms, onion, celery and carrots. Cook and stir until tender, about 10 minutes. Stir in chicken broth, lobster, salt and pepper; bring to a boil, simmer 10 minutes. Stir in cream. In a small saucepan, melt remaining 3 tablespoons butter; stir in flour. Immediately add to soup mixture, cooking and stirring constantly until thickening occurs. Add sherry; mix well and serve. Garnish each bowl of bisque with a sprinkle of paprika.

Jenn Rekuz, Detroit

Lobster Party Dip

8 oz. pkg. lobster ready-to-eat chunks
8 oz. cream cheese, softened
1/2 c. chopped sweet red pepper
1/4 c. chopped sweet onion
1/4 c. mayonnaise
1 T. flaked parsley
1/4 t. garlic powder
salt and pepper to taste

Combine cream cheese and mayonnaise; mixing well. Stir in red pepper, onion, garlic powder, parsley, salt and pepper. Chop lobster into small pieces; stir into mixture. Chill at least one hour. Serve with crackers.

Judy Durrant, Portland

Seafood Sensation

1 1/2 lb. lobster meat
16 oz. cream cheese, softened
1/4 c. milk
2 T. honey
2 T. lemon juice

Topping:

2 c. ketchup or cocktail sauce
1/4 c. prepared horseradish
1 t. dried parsley flakes
1/2 t. Worcestershire sauce
1 t. lemon juice

Shred lobster meat into a 9x11-inch glass baking dish, spreading evenly. Sprinkle with lemon juice. Blend cheese, milk and honey until smooth. Spread over lobster meat. Combine all topping ingredients, mixing well. Spread topping evenly on lobster in pan. Chill well; serve with crackers.

Eileen Hughes, Dayton, OH

Lobster Spread

8 oz. cream cheese, softened
1 T. milk
1 1/2 c. flaked lobster meat
2 T. chopped onion
1/2 t. horseradish
1/4 t. salt
dash pepper
paprika
1/4 c. sliced almonds

Combine cream cheese with milk, mixing until smooth. Add lobster, onion, horseradish, salt and pepper. Spread into a greased 8-inch ovenproof dish. Sprinkle with paprika and almonds. Bake at 375° for about 15 minutes until bubbly. Serve warm with crackers of choice.

Bonnie Gauld, Fife Lake

Broccoli Lobster Mornay

1 bunch fresh broccoli
1 lb. lobster meat
1/2 stick butter
5 T. flour
1 c. milk
1 c. heavy cream
1 c. grated Gruyere cheese
2 T. dry sherry
1/4 c. grated Parmesan cheese
1/2 c. bread crumbs

Separate broccoli into florets, place in a saucepan with a bit of water, and cook until crisp-tender. Remove from

heat and blanch in cold water. Cut lobster into bite-sized chunks. In a saucepan, melt butter; stir in flour. Stir in milk and cream; stirring constantly, cook until smooth and thickened. Remove from heat and add grated cheese and sherry. In a buttered casserole dish, arrange broccoli and lobster. Pour mornay sauce over all. Sprinkle with Parmesan cheese and bread crumbs. Bake at 400° for 10-15 minutes until sauce bubbles and top is lightly browned.

Fabulous Fondue

1 15-oz. jar Cheese Whiz
2 sticks butter
2 lbs. lobster chunks, real or imitation
1 lg. loaf good quality bread

Place Cheese Whiz, butter and lobster chunks in a fondue pot or on stove top in a non-stick saucepan. Heat slowly until hot. Cut bread in chunks. Dip bread into mixture.

Mary Scodeller, Lansing

Florida Spiny Lobster

1-2 lobster tails per dinner guest
1-2 c. drawn butter
lemon, cut into wedges
seafood seasoning
large pot of low-boiling water

If tails are frozen, defrost. Place tails in a pot of low boiling water, around 195°. Boil for 9 minutes; remove from water and cut in half lengthwise, shell and all. Brush meat with drawn butter and sprinkle with seasoning. Place tails in a very hot cast iron skillet, meat side down, for 30-45 seconds to seal in the flavor and give them some color. Serve immediately with lemon wedges and drawn butter on the side.

Jim Larson, Grayling

Cheesy Hot Lobster Dip

8 oz. cooked lobster meat
2 c. mayonnaise
1/2 med. onion, finely chopped
1/4 c. chopped fresh parsley
1/8 t. pepper
2 c. shredded, mild cheddar cheese
paprika

In a medium bowl, shred lobster meat. Stir in mayonnaise, onion, parsley, pepper and cheese; sprinkle with paprika. Spoon mixture into a shallow 1 1/2-quart casserole or baking dish. Bake uncovered at 350° for 20-25 minutes, until heated through. Serve with crackers or bagel chips.

Never have to buy fuel — oil, gas, kerosene, wood — ever again!

Lifetime Warranty

Hydro-Sil is a high performance individual room heating system that allows you to control your home heating cost by replacing old and inefficient heating. It can replace or supplement your electric heat, gas or oil furnace and woodstoves.

A one-time purchase that will last a lifetime: inside the heater is a sealed copper chamber filled with a harmless silicone fluid designed for heat retention qualities. The fluid is quickly heated by a varying amount of **micro-managed proportional power**. This exclusive technology greatly increases energy efficiencies.

The Efficiency of Space Heaters

Space heaters are small, versatile, and generally good at warming a room, and at some point most people consider purchasing one. However, some manufacturers claim that their electric space heater can significantly cut a home's heating bill. Do these claims make sense?

Some basic facts about space heaters will help get at the truth of the matter. Space heaters work best as a supplement to a furnace or heat pump—they are rarely used as the primary heating source. Three main types of space heaters are available, which can usually be bought for \$30 to \$100: radiant heaters, convection heaters and combination heaters.

Radiant Heaters

A radiant heater heats objects and people—not the air—in a room. They are best used in rooms where the person who wants to be warmed can be in direct line of sight of the heater. Radiant heaters can be a good choice if you are in a room for a short period of time and want instant heat. They can pose a burn or fire risk and should not be placed near furniture, drapery, pets or small children.

Convection Heaters

Convection heaters are designed to heat the air—not people or objects—in a room. Hot air from the convection heater rises to the ceiling and forces cooler air to the floor. The cooler air is warmed by the heater and rises to the ceiling, creating a cycle that continues as long as the heater is on. These are typically either baseboard heaters or oil- or water-filled heaters. The oil- or water-filled heaters are the most efficient and typically look like a small radiator. Convection heaters are generally warm to the touch and, compared to a radiant heater, have a decreased fire and burn risk.

Combination Heaters

As the name implies, a combination heater tries to bring the best of the radiant and convection heaters into one package. They often have an internal fan that aids in distributing heat throughout the room. These heaters are versatile and more common as a result, although they do not typically perform as well as a radiant or convection heater.

Before purchasing a space heater you should

Before you buy...

Before buying a space heater it will likely be beneficial to perform some easy and inexpensive energy-saving measures at your home. Any of these could solve your heating problems without any additional heating equipment:

- ✓ Add caulk and weather stripping around doors and windows
- ✓ Add insulation to attics and exposed walls
- ✓ Clean or replace furnace filters
- ✓ Move furniture or obstacles from heat registers
- ✓ Insulate duct work
- ✓ Close blinds or curtains at night

determine how and where it will be used and whether a radiant, convection, or combination heater will do the job best. Combination units are versatile, but you will most likely get better performance from a radiant or convection heater. Use a radiant heater if you want heat instantly and will not move from one spot. If you need to warm an entire room, a convection heater should do the trick.

Most space heaters use between 600 and 1,500 watts of electricity. If a homeowner were to use a space heater eight hours a day, five days a week for a month it would cost approximately \$15.26. So can using a space heater cut your home heating bill? Maybe.

Space heaters can only heat a small space. You can save significant money if you use the space heater with this in mind: turn the thermostat of your central heating system down considerably (as low as 50 degrees in some cases). Place the space heater in a room that is occupied by people, and close that room off from the rest of the home. This method of “zone heating” will save money.

Space heaters do have their place in warming a house. But they simply cannot replace energy efficient central heating or weatherization improvements to the home. For example, *all* electric space heaters produce 1 unit of heat for every 1 unit of electricity consumed, meaning they are 100 percent energy efficient. Those that use natural gas are 80 percent efficient. In comparison, geothermal heat pumps can produce more than 3 units of heat for every unit of electricity consumed, making them 300 percent efficient.

As with any technology, before buying a space heater understand how the device is to be used, and understand the energy claims of the manufacturer. While it may be technically possible to cut your heating bill by 50 percent using a space heater, it is impractical for most people.

Geothermal Heat Pumps: Energy Efficiency From The Ground Up

Geothermal heat pumps are extremely energy efficient and generally yield the lowest utility bills of any residential heating and cooling systems available. With the high cost of energy today and the available energy tax credit, installing a geothermal heat pump could make economic sense for some families.

A geothermal heat pump operates similarly to a standard heat pump except it exchanges heat with the ground instead of the outdoor air, essentially using renewable energy from the sun's rays that are stored as heat in the ground. The temperature of the outdoor air can vary 40 degrees or more from day to night and more than 100 degrees from the coldest winter night to the hottest summer day. In contrast, the temperature several feet below the ground surface varies relatively little.

In order to capture the heat energy from the ground (in the winter) or exhaust the heat during summer, a long pipe is usually buried in the ground. An antifreeze/water solution running through the pipe acts as the heat transfer medium. If there is a pond or wells which can be dug on your land, this water can run through the heat pump heat exchangers. All of the new models use earth-friendly R410A refrigerant instead of freon.

Since no outdoor condenser coils and fans are needed, the entire heat pump and all mechanical components are located in an indoor unit. So, it operates quietly and there is no noise to bother neighbors or your family at night. This also reduces wear and tear from constant exposure to outdoor weather (and playing children).

During winter, in the heating mode, a geothermal heat pump can produce up to \$5 worth of heat for each \$1 on your electric bill. Unlike standard heat pumps, which lose efficiency and maximum heat output as the

outdoor temperature drops, the efficiency and heat output from a geothermal system remains relatively constant.

Moist ground has a huge thermal energy storage capacity so the amount of heat your system pulls out to warm your house all winter has little effect on the ground tem-

heat pumps.

The initial cost of installing a geothermal heat pump is significantly more expensive than a standard air-to-air heat pump, and the final cost of the installation depends upon the type of ground loop needed and the topography of your land. But the federal energy tax credit, which provides a 30 percent tax credit covering the entire cost of installing a geothermal heat pump, does make the initial expense more affordable.

To qualify for the credit, the unit's efficiency must meet or exceed Energy Star® requirements and be installed after Dec. 31, 2007, and before Dec. 31, 2016. Units installed in 2008 were subject to a \$2,000 cap on the credit, so if you already installed one during 2008, you can amend your 2008 taxes and still take the credit.

For any units installed in 2009 through 2016, you can take advantage of the full 30 percent tax credit. File for it by

completing the Renewable Energy Credits subsection on your tax return forms. No proof of purchase is required; however, in case of an audit, keep a detailed invoice of your purchase. The contractor who sold and installed the product should list the purchase as a "Geothermal Heat Pump" on the invoice and that it "Exceeds requirements of Energy Star program currently in effect."

The following companies offer efficient geothermal heat pump systems: Climate Master, 800-299-9747, climatemaster.com; Econar GeoSystems, 800-432-6627, econar.com; Florida Heat Pump, 954-776-5471, fhp-mfg.com; Hydro-Temp, 800-382-3113, hydro-temp.com; and WaterFurnace, 800-436-7283, waterfurnace.com.

Have a question for Jim? Send inquiries to: James Dulley, Michigan Country Lines, 6906 Royalgreen Dr., Cincinnati, OH 45244 or visit dulley.com.

This schematic shows how a geothermal heat pump works during winter and summer.

perature. Some models can also be combined with solar systems to gain more free heat. The most efficient models use a two-stage compressor and variable-speed indoor blower for the best comfort.

In summer, a regular heat pump or central air conditioner loses efficiency and cooling output when it is hotter outdoors. Unfortunately, this is when your house requires the greatest cooling capacity. Cooling efficiencies for geothermal units are as high as 30 EER (energy efficiency ratio). A standard heat pump or central air conditioner is typically less than half as efficient.

Another summertime advantage is free hot water when the geothermal heat pump is cooling your house. Instead of exhausting the waste heat to the outdoor air as a standard heat pump does, this waste heat is diverted to your water heater. This device is called a desuperheater and it is offered as a standard or optional feature on most geothermal

Buying WaterFurnace geothermal has never been easier with a **30% RENEWABLE ENERGY TAX CREDIT**

Thanks to the Economic Recovery Act, there's now a **30% "renewable energy" tax credit** for homeowners who install a qualifying **WaterFurnace geothermal comfort system**. WaterFurnace geothermal units use the **clean, renewable energy found in your own backyard to save up to 70% on heating, cooling, and hot water**. They **don't burn expensive fossil fuels, they reduce our dependence on foreign oil and also happen to be great for the environment**. Call your local dealer and discover for yourself the benefits that only WaterFurnace can provide.

Wolverine Teams With Walloon Lake Trust And Conservancy

One of Wolverine Power Cooperative's four core values is environmental stewardship. The co-op is committed to the thoughtful use of environmental resources.

So, when given the opportunity to partner with conservation groups on the maintenance and improvement of its 1,600 miles of transmission line rights-of-way, Wolverine is on-board.

"Our first priority in our right-of-way work is to make sure our transmission lines are free and clear to keep power flowing," said Adam Helminiak, a utility forester for Wolverine. "But, we can go about our work in ways that protect wildlife habitat we encounter and even improve it."

This summer, Wolverine and its contractor, Trees, Inc., teamed with the Walloon Lake Trust and Conservancy to clear a quarter-mile right-of-way section located within the Conservancy's Frog Hollow Preserve near Walloon Lake in Charlevoix County.

"The Frog Hollow Preserve plays a direct role in keeping our famous Walloon Lake healthier," said Karie Jeisel, a land protection specialist for the Conservancy. "It's the headwaters of South Arm Creek, one of three main inlets to the lake."

Helminiak worked with Conservancy members on a specific plan for Frog Hollow that included the following:

- Manual clearing of tall, woody vegetation within the right-of-way. Conservancy volunteers completed a majority of this work using chainsaws, rather than heavy mowing machinery, thus reducing soil compaction.
- Scattering of brush, rather than piling,

Members of the Walloon Lake Trust and Conservancy who assisted Wolverine with right-of-way work were, from left, Karie Jeisel, Bob Charlton, Maureen Parker and Bill Stetson.

"Energy for Wildlife" Member For Over 5 Years

Wolverine Power Cooperative became a certified Energy for Wildlife member in 2004, meeting requirements for the program set by the National Wild Turkey Federation (NWTf). Certification is the program's highest level of membership and requires the development and implementation of a vegetation and wildlife management plan.

Wolverine was honored in 2009 with NWTf's Energy for Wildlife Corporate Achievement Award recognizing the co-op's success in integrating wildlife conservation into its right-of-way management program.

Energy for Wildlife strives to create or improve wildlife habitat on utility rights-of-way and other property owned or controlled by energy companies. The program is open to all energy companies including electric, natural gas, gasoline, oil, coal wind and other emerging energy source companies.

to maintain regular water flow patterns.

- Removal of woody brush directly under the transmission lines and dead, weak or leaning trees along the right-of-way.

"Our mission is to provide reliable power to our members," Helminiak said. "We accomplished this at the Frog Hollow Preserve and took our efforts a step further in partnering with the Conservancy to protect nearby waterways."

Cherryland Bulletin Board

Zickert Appointed To Cherryland Board

Jon Zickert is the newest board member at Cherryland Electric Cooperative.

Zickert replaces Jack Pope, who retired from the board after November's meeting.

The Thompsonville man will serve out Pope's term that runs through the annual meeting on June 16. To continue on the board, he will have to run for re-election.

Zickert is a manager at Crystal Mountain Resort. He oversees approximately 80 employees in the front office, building, engineering, security, transportation and house-keeping areas.

He's also a founding member of the Crystal Mountain 'Green Team,' whose goal is to reduce, reuse and recycle.

Zickert graduated from the University of Wisconsin at Stout with a degree in hotel and restaurant management. He worked in Atlanta, Grand Rapids and Cleveland before coming to Crystal Mountain in 2001.

Cherryland Announces Personnel Changes

Three long-time Cherryland employees have retired.

Administrative Assistant Pat Barone, Energy Advisor Bill Garey and Lineman Denny Fasel have retired after a combined 93 years of service.

"We are grateful to Pat, Bill and Denny for their years of dedicated service to our cooperative," said Cherryland General Manager Tony Anderson. "They will be missed."

Kerry Kalbfleisch has taken over as Barone's replacement. A native of St. Ignace, she and her husband Charlie have two daughters. Kerry was a recruiting manager for Manpower Professional.

Tammy Squires, a Cherryland member services representative, took over for Garey on Jan. 1 as energy use advisor.

CEC Student Scholarship Now Worth \$4,000

Cherryland Electric Cooperative's scholarship for a high school senior is now worth \$4,000.

Since the creation of the scholarship over 20 years ago, the amount was \$600 a year for four years—\$2,400. But with college costs escalating, Cherryland has increased the

scholarship amount to \$1,000 a year. The deadline for scholarship applications is Friday, April 2. See page 28 of this issue for more eligibility details.

A \$500 adult scholarship is also available for those who have graduated from high school and are taking college courses. The application deadline is the same, April 2, and details can be found on page 28.

Reader Helps Clarify Voltage Description

An astute *Michigan Country Lines* reader recently pointed out that a correction was in order in reference to a recent story about voltages.

The story said: "This wire is usually called 'triplex' as it is made of three wires braided together. One wire carries 240 volts... another wire carries 110 volts..."

The correction should read: The 'triplex' is three wires, one neutral and two that carry 120 volts each. The triplex carries a total of 240 volts.

Pay Your Electric Bill Online

Want to save money and pay your Cherryland Electric Cooperative bill online?

It's easy to do. You can set up your accounts to get only an e-mail bill—no more paper bills. To do this, access your account on cherrylandelectric.com. It will prompt you immediately after you sign in to decide whether or not you want the paper bill to continue; if you do, check the box. If not, simply press "update."

Questions about online payment can be answered by Cherryland's Member Service Department at 486-9200.

Energy Tip

Replacing just four 75-watt incandescent lightbulbs with four 23-watt compact fluorescent equivalents will save almost \$200 over life of the bulbs.

Cherryland Offers Scholarships

Adults: Cherryland Electric Cooperative is offering a \$500 Adult Education Scholarship to one of its members.

The scholarship goes toward covering the cost of a course or courses taken in a calendar year.

This scholarship will be awarded based on need, grades and community service, and is a one-time award.

Members may request an application by emailing Nick Edson with their name and address to nicke@cecelec.com, calling him at 486-9222, or writing him at Cherryland, 5930 U.S.-31 South, Grawn, MI 49637. Applications are due by *Friday, April 2, 2010*.

Students: High school seniors whose parents or guardians currently receive monthly electric service from Cherryland and live in our service area may apply for a \$2,400 college scholarship (\$600 for each of four years).

Selection is based on GPA, extracurricular activities, community involvement and/or after school employment. A minimum required GPA is 2.75 on a four-point system. To continue receiving the scholarship, a student must maintain a minimum college course load of 12 credits per term or semester and receive a 2.5 GPA.

Applications are due by *Friday, April 2, 2010*. Students may apply in three ways:

1. Complete the form below; or,
2. Contact your high school guidance counselor; or,
3. Contact Nick Edson, communications coordinator at Cherryland Electric, as noted in the adult scholarship section above.

The opportunity of a lifetime...

...to make new friends and win a free trip to Washington, D.C.!

By attending Co-op Teen Days in April—a 3-day event sponsored by your electric co-op—with students from across the state, you'll learn about electrical safety, energy efficiency, and some valuable career information. You may then be chosen to represent your co-op at the Rural Electric Youth Tour to Washington, D.C., in June, and along with 1,200 students from across the U.S., you'll go on tours, see the sites, and even visit U.S. legislators and their staff on Capitol Hill.

If you're a 10th or 11th grade high school student who will be 16 or 17 by June 2010, and your family receives their electric service from Cherryland Electric, you are eligible to apply. For an application or more information, call or write: Nick Edson, P.O. Box 298, Grawn, MI 49637; 231-486-9222; or email nicke@cecelec.com.

Learn more about Michigan Electric Cooperative Teen Days and Youth Tour at countrylines.com, and click on "Youth." Also visit youthtour.coop to see more videos and photos.

Don't miss out!

Teen Days: April 28-30
Youth Tour: June 12-17

Books: When We Read 'Em and Where We Get 'Em

Dear Readers, I was recently visiting with friends at a local coffee shop and as usual asked for suggestions for this column. Instantly, the topic of books was tossed into the conversation and everyone became animated, creative and positively excited!

Jill James

Is there a season when we read more books? Half of us agreed that the fall and winter months seem to embrace reading with their longer nights, quiet moments indoors, and just plain "snuggle reading," when the weather is blustery and unfriendly.

For myself, I save reference or nonfictional reads for the winter months when I write in the margins and smile when a Jeopardy question is answered from my time spent in a book just weeks earlier.

The other half claimed that the warmth of summer encouraged more reading. They were on their decks or a beautiful shore reading and enjoying the warm breeze and sounds of summer. They drank wine and summer book clubs were as abundant as summer residents. We eventually determined that all the seasons are perfect for a "good read."

Where do we get our books? This question raised so many responses I could not wait to list them all:

- Our local library was number one
- Book exchanges with friends/family
- Community book-drop sites
- Book clubs
- Resale stores
- Fundraising book sales
- Doctors office
- Employee break rooms
- Recycling centers (great place to find magazines just lying on top)
- Day care centers (especially kids' books)
- Fitness centers
- Garage/estate sales
- Online book websites
- Book stores.

In this conversation, I discovered that many voracious readers have a stack of unread books always available, look for inexpensive ways to find books, only

keep copies of absolute favorites for revisiting, do not always see the movie made from a beloved book, talk about characters in a book like they are family, read through the night when it is necessary, sit quietly and ponder a book after finishing the last page, savor the smell of a book, use anything handy as a bookmark, crave a new release, have author loyalty, and are open to discussing a book at anytime or place.

Everyone at the table had a different book genre they preferred. Many did audio books, and used computers and ipods for downloading books for the same purpose. Most everyone was on a first-name basis with his or her local librarian. Many used a special tote for their books and visited the library more than twice a week. Most

of those involved in this discussion agreed that reading keeps them informed, open to new learning, and admitted a secret passion for becoming a writer.

I always figured there were many book nerds in my area and this discussion confirmed it. I came away with many new titles, and an understanding of the individual passion for books

Books have always been a part of "living green" because of their accessibility to everyone through public and school libraries and related requirement to be a responsible borrower. To quote a phrase remembered since grade school, "Reading is Fundamental."

E-mail your thoughts, ideas or questions on "green living" to Jill at jilliebeangreen@gmail.com or by mail to Cherryland Electric, Country Lines, P.O. Box 298, Grawn, MI 49637.

Stay Warm and Safe With Space Heaters

With the cold kicking in, families are doing whatever they can to stay warm and sometimes when extra blankets aren't enough, many turn to space heaters. Unfortunately, every year we've seen the danger those devices can create, and this winter is no different.

The U.S. Consumer Product Safety Commission estimates that more than 25,000 residential fires every year are associated with the use of room (space) heaters. Over 300 people die in these fires. An estimated 6,000 people receive hospital emergency room care for burn injuries associated with contacting the hot surfaces of room heaters, mostly in non-fire situations.

The good news is that all of those numbers are preventable with a few safety tips and some common sense. If you use a space heater, please go over these tips.

▲ Always keep a fire extinguisher in the same room as a space heater, and know the proper way to use it.

▲ Never leave a space heater on when you are out of the room or sleeping.

▲ Teach kids the danger of touching or moving a space heater without mom or dad in the room.

▲ If there are kids or animals in the area, place a protective cage around the space heater.

▲ Never place a space heater on carpet or near draperies, furniture, bed clothes, clothing or fabric of any kind.

▲ Only use space heaters with thermostats and automatic shut-offs.

Remember your responsibility to your family, friends and co-workers when using these important appliances.

Winter is one of the great reasons we all enjoy living in this beautiful area, and by following simple safety tips and using common sense, we will remember this winter as one of our best. Follow these guidelines to stay warm and safe!

Tim Keenan is Cherryland's safety supervisor.

Farewell to Paradise

Remember that great movie, “On Golden Pond?”

My wife Darl and I have recently identified with Henry Fonda and Katherine Hepburn, the stars of that film. As readers of this column know, I have been legally blind for over 40 years and Darl has done all the driving, checkbooks, cooking, and more. Her health now interferes with her driving, and more. So, we have sold our beautiful home on the Lake Superior shore and moved to a retirement home in East Lansing to be near our family.

There were tears on the keys of my typewriter as I wrote this in late October, looking out on Whitefish Bay.

Leaving Paradise, after nearly 25 years of retirement bliss, will be very hard for both of us. But the time has come and we look at it all as another chapter in our lives. At 77 and 76, and 55 years of marriage, we promised our family to move into the future with all the grace we can muster.

While I felt it important to share all this news with so many readers who have been special to us, I do not want it all to sound like an end or a funeral. Let me show you some of the “other side of the coin.”

We completed a 30-year newspaper career in Lansing that got me into several halls of fame and Darl did as much as a successful school teacher in Lansing.

Perhaps more important is that we have enjoyed nearly 25 years of great retirement in Paradise. What’s more, Darl has hauled me all over the United States in our travel trailer. She should have been an 18-wheeler driver.

For more than 25 years, I have also written this “Right At Home” column in *Michigan Country Lines* magazine and developed a relationship with some very

special readers. So many letters and phone calls have put me in tears as you helped me battle cancer, and other low spots in our lives. I am glad I never got around to quitting *Country Lines* earlier because it kept me from getting brain-dead, and readers have vastly enriched our lives.

So, what’s next for us? We’ve moved to a two-bedroom retirement apartment, Independence Village, 2530 Marfitt Road, Apt. 319, East Lansing, 48823. With two sisters, a brother, two kids, five grown grandkids and Darl’s brother living in the area, we are in good hands.

At a time when it is most difficult to sell a home, we lucked out to get a good deal from two of our special friends, Steve and Fran Findley of Oshkosh, WI. They and their two teenage children, Steven and Elizabeth are excited, and we know that our home has a great future with them.

Because it is just too hard to say goodbye to you readers, I won’t do it. My longtime friend, Mike Buda, current executive editor of this magazine and the guy who hired me to do this column so many years ago, has insisted that I will have space in this magazine any time I want it. Mike is a great writer, so I have been urging him to personally take over this column for now.

As we so reluctantly leave our beloved Upper Peninsula, each of you need to know how much we treasure all the memories you gave us.

P.S. I have signed books for you to order from the advertisement on page 27. All proceeds go to scholarships for rural kids.

Clockwise from top left: Cleaning smelt, May '09; Clyde the chipmunk hunter, July '07; Jim and his welcome sign, May '05; Candy, Jim's first dog, May '86; bad birds, April '05; John Ward and Bubba, Sept. '04; Jim in the '80s; winter in Paradise.

Our New Name Says It All

Sign up today for Operation Roundup!

What is Operation Roundup? It's where we round your Cherryland Electric Cooperative bill up to the nearest dollar and donate the difference to our Cherryland Cares program. The volunteer Cherryland Cares board then distributes 100 percent of the money in the Cherryland coverage area to those in need.

Your donations have helped many, including Children's Bereavement Network, Pregnancy Care Center, Michael's Place, Child & Family Services, Big Brothers & Big Sisters, Grand Traverse Bay YMCA, and dozens of others.

Yes!

I want to help by joining Operation Roundup. Please "round-up" my bill to the next highest dollar each month.
