# Some choices are clear.

## WaterFurnace Geothermal

- ☒ Even, luxurious comfort
- ☒ Savings up to 70% on bills
- ☒ Uses the clean, renewable energy in your backyard
- ☒ Provides heating, cooling & hot water
- ☒ 25 year system life<sup>1</sup>

## Fossil Fuel Furnace

- ☐ Hot to cold swings
- ☐ Volatile fossil fuel prices
- ☐ Relies on the combustion of fossil fuels
- ☐ Provides heating, heating & more heating
- ☐ 15 year system life

Life is full of difficult choices, but choosing a WaterFurnace geothermal heat pump isn't one of them. WaterFurnace can save you up to 70% on heating, cooling & hot water by capturing the clean, renewable energy in your backyard. Plus, for a limited time, we're offering **instant rebates** on any of three geothermal packages. Each is tailored to fit your needs - so every choice is perfect. And with an additional **30% federal tax credit**, there's never been a better time to choose WaterFurnace. Visit your local WaterFurnace dealer for more information.

**\$2,000**

Instant Rebate

### Ultimate Comfort Package

Includes our variable capacity 7 Series—the most efficient unit on the market—installation accessories and choice of communicating thermostat and/or zoning system.

**\$1,000**

## PRESIDENT'S MESSAGE

# Rate Restructuring

Your electric co-op has initiated a cost-based rate filing with the MPSC.

In our July/August issue, I discussed our rate restructuring plans. At the July board meeting, the directors unanimously approved a rate restructuring filing and

authorized management to move forward with the cost-based rate design as presented by the year-long cost-of-service study.

The objective of our rate restructuring is to have one set of rates for the cooperative, reduce the number of rate classes into three basic categories: residential, general service and large power service, and change the monthly facility charge so that it recovers the fixed costs of providing service regardless of kilowatt-hour sales. Our current rate structure is not recovering our fixed costs or the necessary revenues to make needed system improvements and infrastructure investments.

What's needed today isn't much different than what was needed 75 years ago when neighbors banded together to make electric service a reality. They understood that it was important to build a safe, reliable system that would also serve future generations. It wasn't cheap or easy then, and it isn't now. But today it's our responsibility to keep making necessary investments that make it safe, reliable and affordable into the future, just as it was done for us.

On Aug. 5, 2013, we submitted our rate filing to the Michigan Public Service Commission (MPSC) for review. Over the next few months, the MPSC's technical experts will review the testimony submitted with the filing, analyze the proposed rates, and conduct hearings. An order is anticipated early next year with the approved rates, which may or may not be those proposed in this filing.

## Frequently Asked Questions

### ■ Why is Cloverland restructuring its rates?

Our objective is to implement one set of cost-based rates and increase revenue to meet our financial requirements. An expert, third-party utility consulting firm performed an in-depth cost-of-service study that provided the road map for our new rate design. This design creates fairer and more equitable rates for all co-op members. It will enable members to reduce their energy use without reducing the revenues the co-op

requires to operate efficiently and continue making necessary system improvements.

### ■ Tell me about the cost-of-service study.

The cost-of-service study (COSS) addresses rate design and the method by which your cooperative can collect the revenue it needs from each rate class so that each rate class is paying their fair share of the costs.

The study was performed by utility consultants, the Prime Group LLC of Crestwood, KY. They examined our rate classifications and costs for providing service. This study gave us a road map to accomplish the following objectives:

- Introduce one set of cost-based rates for the cooperative;

- Allocate costs across all rate classes so that rates more fairly reflect costs to serve each rate class;

- Recover the fixed costs of providing the minimum set of equipment and services that any member needs through the monthly facility charge instead of through the energy charge.

**Daniel Dasho**  
President & Chief  
Executive Officer

**Plan to attend an upcoming MEMBER MEETING near you. See back cover for details.**

### ■ If Cloverland is not-for-profit, why is it concerned about increasing revenues?

Our current rate structure is not covering our fixed costs. Our member-owners provide the necessary revenues that enable us to make system improvements and perform ongoing maintenance to keep our electrical system safe and reliable.

### ■ What is the monthly facility charge? Is it new?

It is not new. It is an itemized monthly charge used to recover the fixed costs associated with providing service from the service point (meter) to the substation whether or not any kilowatt-hours are used.

The facility charge is similar to the monthly charges billed by phone and cable providers for basic service. It's the fixed costs to have the service available.

Increasing this charge will both reduce volatility in the cooperative's revenue due to factors such as weather, and reduce the volatility of our members' energy bills. While the proposed facility charge will not completely recover these costs with this filing, the new rate design moves us in a direction toward greater financial stability. It also allows us to encourage member-consumers to use electricity more efficiently through incentive-based, energy efficiency programs.

### ■ What are the fixed costs?

A few of the fixed costs include expense items such as poles, wires, transformers, line equipment, vehicles, tree trimming, property taxes, interest, maintenance and administrative expenses.

For years, utilities included a portion of these fixed costs in their per-kilowatt-hour charge. In doing so, the revenue collected through the energy charge to cover these costs was dependent on kilowatt-hour sales that fluctuate with changes in weather, economic conditions, energy efficiency efforts, and lifestyle patterns. The co-op can better plan and manage operations when the revenue needed to provide for these costs is not dependent on kilowatt-hour sales.

### ■ How does Cloverland decide the amount of revenue it takes to run the cooperative?

Our lenders and the Michigan Public Service Commission use a Times Interest Earned Ratio (TIER) formula to determine whether the cooperative is collecting enough revenue

## Proposed Rates & Rate Classes

The August rate filing submitted to the MPSC proposes one set of rates for the cooperative based on the following restructured energy and facility charges:

Rate Class	Energy Charge	Monthly Facility Charge
Residential	\$0.09320 per kWh	\$20 per meter
General Service	\$0.10155 per kWh	\$15 per meter – single phase \$30 per meter – three-phase
Large Power*	\$0.07453 per kWh	\$110 per meter

\*\$8.03 per kW, demand charge

to meet its capital expenditures and interest owed. It is calculated by adding the co-op's margins and interest together and dividing that total by the interest. A healthy TIER is around 2.2.

### ■ How will the rate restructuring affect my bill?

The overall effect of the proposed rate redesign will vary depending on your rate class and usage. The greatest difference in the new rates is the change in the monthly facility charge. Because all members benefit from having the comfort and convenience of electricity, the proposed facility charge ensures that everyone pays their fair share of the basic costs whether or not a single kilowatt-hour is used.

### ■ What is Cloverland doing to improve system reliability and infrastructure?

We are investing \$70 million over the next four years in infrastructure improvements. Some projects will include re-building 244 miles of power lines, upgrading substation equipment, improvements to the hydro canal in Sault Ste. Marie, turbine upgrades, adding emission-control equipment to diesel generators and replacing 400 utility poles and 1,000 transformers.

### ■ If Cloverland needs more revenue, why not just keep my capital credits instead of retiring them every year and returning them to me?

As a not-for-profit utility, we are required to allocate any net margins earned as capital credits to the membership. The unretired capital credits in your account represent your ownership equity. Over time, capital credits are retired and returned to members.

### ■ Why not phase-in these changes over several years?

It is our intention to recover the revenues we need to meet current and future obligations starting with this filing. If approved, we will move toward a full cost-based rate phase-in over the next five years. This would involve increasing the facility charge and reducing the energy charge if the cooperative's revenue needs continue to be met.

### ■ Is energy efficiency still a good thing?

Adopting more energy efficient practices in our homes and businesses is good for the environment, good for our electrical grid, and the right approach in the long-run. Our incentive-based programs make it easier for members to invest in more energy efficient lighting, products and systems. This reduces overall energy use, and ultimately, the number of kilowatt-hours billed each month through the energy charge. By recovering our fixed costs and margins through the facility charge, we can ensure that your cooperative remains financially viable while creating a better environment for energy efficiency.

### ■ Where can I obtain more information about this filing in the future?

We will keep you informed through your membership magazine, *Michigan Country Lines*, and our website, [cloverland.com](http://cloverland.com). We will also conduct outreach meetings Oct. 7-9 (see back cover), where you can learn more about the cost-of-service study, methods used to develop our new cost-based rate structure, and project plans to improve service and system reliability.

## Letters & More

Reader letters, call to Action.coop, Mystery Photo, and more. It's all here on your Readers' Pages.

### Independence

I grew up in the '50s in Buffalo New York. When I read your story about "Independence," it really made me think of the good old days. The boys would play baseball just like you said. We all looked forward to summer. Thanks for the story.

— Gene Ehrhardt, *Schoolcraft*

I am new to *Country Lines* and always read your column, but after reading "Independence," I felt compelled to contact you.

I retired in 2012 after 30 years as an elementary/middle school educator. From my own childhood and seeing changes in children over the years, we have done them no favors by regimenting their free time.

I too grew up playing pick-up games until the street lights came on and we all had to head home. We explored and spent hours at the fishing hole or nearby woods. Through these activities, we learned to understand the world, make decisions, and negotiate difficulties.

## Video: Co-ops Urge Common Sense on Climate Regulations

A micro website, called Action.coop, was just launched by the National Rural Electric Cooperative Association (NRECA) that gives a voice to the 900-plus electric co-ops and their 42 million consumer members that oppose President Obama's climate proposal. The proposal uses the Clean Air Act to regulate carbon dioxide emissions from power plants during a fragile economic recovery.

The site's two-minute video is the first action in what will be a long-term campaign to underscore the dramatic impact new regulations could have on the country's electric generation and calls on co-op members, staff and directors to join the united effort.

"Rural communities have a great story to tell about how they are innovating, using new technologies, and leading in energy efficiency. It's our responsibility to communicate the importance of affordable energy to the communities cooperatives serve and tell their story on how we are pursuing our energy future," explains Jo Ann Emerson, CEO of NRECA. "The next few months are a critical time to unite behind that message and let

Visit Action.coop and join NRECA CEO Jo Ann Emerson and fellow electric co-op members in asking that climate change issues be approached sensibly and affordably.

policymakers know where we stand on the issues, as well as how important affordable energy is to us and the American economy."

The NRECA website announcement was made about the same time that Organizing for Action, a grassroots group of Obama supporters, emphasized their support for his proposed climate regulations in late August.

See the video and sign up at **Action.coop** to join the fight for adding common sense to the national climate change debate and keeping electric rates affordable.

As a teacher, I have seen fewer and fewer children who are independent thinkers able to solve problems. We call it "learned helplessness." As adults, we provide all the answers by structuring and supervising many aspects of our children's lives.

Most of our children no longer want to spend much time outdoors. Richard Louv's wonderful book titled, "Last Child in the Woods: Saving Our Children from Nature-Deficit Disorder" speaks volumes. How will future generations protect something they haven't learned to cherish?

One of the best suggestions is from parenting advice writer John Rosemond. He says today it may not be safe for children to be completely unsupervised, but recommends that parents rotate being "available." One parent takes a book and lawn chair to the local play site. If there's an emergency, the parent is there, but otherwise doesn't intervene. The kids play, and decide by as much arguing as necessary if the pitch was a strike or Josh was out.

The ball fields behind my home are empty all summer. Oh, if we would've had these facilities as children, my mom

may have had to ring the dinner bell to get us in for the night!

— Sharon Roeck

### Wind Talkers

Our family thinks your [July-August] article on the "Pros and Cons of Wind Power" lacked some significant issues.

We live in the middle of Consumers Energy's Lake Winds Energy Park, which began operation last Thanksgiving, and know from firsthand experience the shadow flicker, flashing lights and noise are not trivial matters for many who end up having their piece of heaven literally

### ◀ DO YOU KNOW WHERE THIS IS?

Every co-op member who identifies the correct location of the photo at left by **Oct. 10** will be entered in a drawing for a \$50 credit for electricity from their electric cooperative.

**We do not accept Mystery Photo guesses by phone!** Email **mysteryphoto@countrylines.com**; enter your guess at **countrylines.com**; or send by mail to *Country Lines Mystery Photo*, 2859 W. Jolly Rd., Okemos, 48864. Include your name, address, phone number and name of your co-op. Only those sending complete information will be entered in the drawing. The winner will be announced in the Nov./Dec. 2013 issue.

The July/August contest winner is Marc Parshall of Grand Ledge, who correctly identified the photo from E. Grand River St., Old Town, Lansing.

surrounded by industrial turbines and the lawsuits they have generated in most of the wind farms built in Michigan. Turbines may be wonders of human ingenuity, but after the novelty wears off they begin to wear on you.

— Eric Jefferies, Ludington  
Great Lakes Energy Co-op

## Using Less Electricity

Your *Country Lines* is an interesting little magazine—just read the May/June! This issue, like many others, suggests using less electricity.

Several good methods were mentioned, including low-E windows (James Dulle, “Cut Through Sales Hype Before Replacing Windows”). We had a house with those, Anderson, and not enough light came into the house—even our house plants suffered!

Another issue arises with ‘saving.’ In Manistique, we have saved our water use so much that the city now does not receive enough to pay for their treatment plant modification! Will our electricity work the same way so that our unit cost will be increased?

— Don Hartman

*Your water bill experience is not uncommon. Utilities are finding it difficult to keep rates low due to federal, state and local environmental regulations. The best way to manage rising costs is to use energy more efficiently, which helps keep energy bills low.*

*The energy efficiency programs you refer to are required by P.A. 295, the “Clean, Renewable and Efficient Energy Act of 2008”, which requires all electric providers and investor-owned natural gas providers to implement energy efficiency programs. It’s intended to avoid the cost of constructing new power plants, which cost billions of dollars and would raise electric rates. The cheapest*

*kilowatt is the one that isn’t used. For more on Energy Optimization Programs, visit [michigan-energy.org](http://michigan-energy.org) or call 877-296-4319.*

— Art Thayer, energy efficiency  
programs director, Michigan  
Electric Cooperative Association

## Hydrothermal Energy?

In July/August, your geothermal energy article makes no mention of hydrothermal heating/cooling.

Geothermal makes use of a closed-loop system that circulates a fluid thru the furnace via a pump, which does not function if the power is out. Hydrothermal input is a water source like a river, lake or an artesian flowing well.

The first two require a pump and the output is returned to the source. An artesian flow, like mine (224’ deep well), requires no pump and the output is sent into a river, lake, or other drainage system. If the power is out, the faucets and toilets still work, but the furnace does not, as there’s no electricity to run the blower.

— Dave Westfall, Naubinway

*There are three types of geothermal loops: open, closed earth, and closed pond, but not all are suited for Michigan (visit [earthcomfort.com](http://earthcomfort.com), [dulle.com](http://dulle.com), or search Wikipedia.com).*

*An artesian well system is more efficient because it eliminates pumping costs, but few people have one. Hydrothermal resources need heat over 300 degrees F to generate electricity, and there are some lower heat uses, but it’s uncertain yet how Michigan fits in. A Statewide Geothermal Data Project is being conducted at WMU, but early data shows we may not have the right temperatures. Ideal locations are currently in California, Oregon, Nevada, Idaho and Wyoming. Visit [www1.eere.energy.gov/geothermal](http://www1.eere.energy.gov/geothermal) to learn more about hydrothermal technologies.*

— Art Thayer, MECA

## Co-op Employees Experience Challenges of Rural India

**M**ichigan Country Lines found its way to India this summer. Ashley Copeland and Scott Blecke, electrical engineers at Great Lakes Energy (Boyer City), visited in July as part of their MBA studies. They’re shown above with a copy of the magazine in front of Mysore Palace, about three hours from the city of Bangalore. Their trip was part of a management course designed to teach the challenges and advantages global companies face in interacting with and developing products for a nation like India.

“It was a very humbling experience,” Scott says. They discovered that India’s electrical distribution systems only vaguely resemble those in America. Live wires and equipment hangs so low that people can easily touch them, and no regulations govern such unsafe situations. The

government owns the Bangalore electric system. “Something like that would never be okay in the United States, and yet over there everyone just knows that you don’t go touching the lines, and if you do, it’s your own fault,” Scott says. In the United States, utilities are expected to take responsibility for the public’s safety.

“It’s amazing,” Ashley says, the efforts some companies are making, however, to help India’s rural areas. They visited a village where a company called SELCO installed affordable solar panels to charge batteries for portable lights that children use at night. The solar units average about \$150 and residents can take five years to pay for them.

Both employees said they appreciate their U.S. lifestyle more fully after witnessing rural life in India.

— Linda Kotzian

# STATE OF MICHIGAN

## BEFORE THE MICHIGAN PUBLIC SERVICE COMMISSION

### NOTICE OF HEARING FOR THE CUSTOMERS OF CLOVERLAND ELECTRIC COOPERATIVE, MIDWEST ENERGY COOPERATIVE, and THUMB ELECTRIC COOPERATIVE CASE NUMBERS: U-17294, U-17295, and U-17296

- Cloverland Electric Cooperative, Midwest Energy Cooperative and Thumb Electric Cooperative (the Cooperatives) request Michigan Public Service Commission approval to reconcile their individual Energy Optimization (EO) plan expenditures and revenues collected for the period ended December 31, 2012.
- The information below describes how a person may participate in this case.
- You may call or write the Cooperatives' attorney, Mr. Shaun M. Johnson, at Dykema Gossett PLLC, Capitol View, 201 Townsend Street, Suite 900, Lansing, MI 48933, 517-374-9100 for a free copy of the application. Any person may review the application at Dykema's offices or at the respective offices of the Cooperatives, Cloverland Electric, 2916 W. M-28, P.O. Box 97, Dafter, MI 49724; Midwest Energy Cooperative, 901 E. State St., P.O. Box 127, Cassopolis, MI 49031; and Thumb Electric Cooperative, 2231 Main St., P.O. Box 157, Ubly, MI 48475-0157.
- The first public hearing in this matter will be held:

<b>DATE/TIME:</b>	October 2, 2013, at 9:00 a.m. This hearing will be a prehearing conference to set future hearing dates and decide other procedural matters.
<b>BEFORE:</b>	Administrative Law Judge Mark E. Cummins
<b>LOCATION:</b>	Constitution Hall, 525 West Allegan, Lansing, Michigan
<b>PARTICIPATION:</b>	Any interested person may attend and participate. The hearing site is accessible, including handicapped parking. Persons needing any accommodation to participate should contact the Commission's Executive Secretary at (517) 241-6160 in advance to request mobility, visual, hearing or other assistance.

The Michigan Public Service Commission (Commission) will hold a public hearing to consider the Cooperatives' July 1, 2013, joint application for Commission approval to reconcile their individual EO plans for the period ended December 31, 2012. The Cooperatives are requesting authorization to reconcile their EO plan expenditures and revenues collected for the period ended December 31, 2012.

All documents filed in this case shall be submitted electronically through the Commission's E-Dockets website at: [michigan.gov/mpscdockets](http://michigan.gov/mpscdockets). Requirements and instructions for filing can be found in the User Manual on the E-Dockets help page. Documents may also be submitted, in Word or PDF format, as an attachment to an email sent to: [mpscdockets@michigan.gov](mailto:mpscdockets@michigan.gov). If you require assistance prior to e-filing, contact Commission staff at (517) 241-6180 or by email at: [mpscdockets@michigan.gov](mailto:mpscdockets@michigan.gov).

Any person wishing to intervene and become a party to the case shall electronically file a petition to intervene with this Commission by September 25, 2013. (Interested persons may elect to file using the traditional paper format.) The proof of service shall indicate service upon the Cooperatives' attorney, Shaun M. Johnson, at Dykema Gossett PLLC, Capitol View, 201 Townsend Street, Suite 900, Lansing, Michigan 48933.

Any person wishing to appear at the hearing to make a statement of position without becoming a party to the case may participate by filing an appearance. To file an appearance, the individual must attend the hearing and advise the presiding administrative law judge of his or her wish to make a statement of position. All information submitted to the Commission in this matter becomes public information: available on the Michigan Public Service Commission's website, and subject to disclosure. Please do not include information you wish to remain private.

Requests for adjournment must be made pursuant to the Commission's Rules of Practice and Procedure R 460.17315 and R 460.17335. Requests for further information on adjournment should be directed to (517) 241-6060.

A copy of the Cooperatives' request may be reviewed on the Commission's website at: [michigan.gov/mpscdockets](http://michigan.gov/mpscdockets), and at the office of Dykema Gossett PLLC, Capitol View, 201 Townsend Street, Suite 900, Lansing, Michigan; or at the respective Cooperatives' offices. For more information on how to participate in a case, you may contact the Commission at the above address or by telephone at (517) 241-6180.

Jurisdiction is pursuant to 1909 PA 106, as amended, MCL 460.551 et seq.; 1919 PA 419, as amended, MCL 460.54 et seq.; 1939 PA 3, as amended, MCL 460.1 et seq.; 1982 PA 304, as amended, MCL 460.6j et seq.; 1969 PA 306, as amended, MCL 24.201 et seq.; 2008 PA 295, MCL 460.1001 et seq., and the Commission's Rules of Practice and Procedure, as amended, 1999 AC, R 460.17101 et seq.

August 27 2013

## Public Act 295: The Clean, Renewable and Efficient Energy Act 2012 Annual Energy Optimization Report

**Cloverland Electric Cooperative  
MPSC Case Number U-16681**

Cloverland Electric has contracted with the Michigan Electric Cooperative Association (MECA) to administer its Energy Optimization efforts in order to comply with P.A. 295. MECA filed a 4-year Energy Optimization plan with the MPSC on Aug. 1, 2011, as required by P.A. 295. This EO plan was approved by the MPSC on Nov. 10, 2011, and we began implementing the plan Jan. 1, 2012. The Wisconsin Energy Conservation Corporation (WECC) was selected to implement all Residential, Commercial and Industrial Programs, and the Energy Optimization website [michigan-energy.org](http://michigan-energy.org). WECC has subcontracted with JACO, Michigan Energy Options, Franklin Energy, Morgan Marketing Partners, and Honeywell to assist with the implementation of the EO Programs. MECA contracted with KEMA as the independent third party evaluation contractor for the certification of kilowatt-hour savings.

In 2012, Cloverland Electric collected \$1,202,036 through the Energy Optimization Surcharge and spent \$904,920, resulting in an over-collection of \$297,116, which will be applied towards the 2013 EO Program delivery expenses and goal achievement. Cloverland Electric achieved 7,365 megawatt-hours of energy savings in 2012. The full report can be obtained at [michigan-energy.org](http://michigan-energy.org) or [efile.mpsc.state.mi.us/efile](http://efile.mpsc.state.mi.us/efile).

**Bell Farm Gets Long-Awaited Recognition** – The Bell family horse farm in Sault Ste. Marie was officially recognized as a Centennial Farm on June 17, 2013. Owned by Lovada and Arlen Bell, the 135-acre farm has been in operation since 1907. Cloverland employee Owen Bell (son of Lovada and Arlen, far right) presents the centennial sign to his family on behalf of the co-op and the Historical Society of Michigan. (Pictured L-R: Amy Bell, MacKenzie Bell, Cale Bell, Lovada Bell, Arlen Bell, and Ashtyn Bell)

# DOUBLE up

## How much can you save?

Why settle for one when you can have two?

**Receive a \$150 Energy Optimization rebate** when you install a qualifying energy-efficient furnace. **Or, double up and get \$350** when you purchase an efficient furnace and central air conditioner together. With double deals, now is the time to save!

**ENERGY TIP: An energy-efficient furnace with a variable speed motor cuts energy use by 16% per year.**

ONLINE: [michigan-energy.org](http://michigan-energy.org) PHONE: 877.296.4319

**Energy  
Optimization**

**Cloverland  
ELECTRIC COOPERATIVE**

Energy Optimization programs and incentives are applicable to Michigan service locations only. Other restrictions may apply. For a complete list of participating utilities, visit [michigan-energy.org](http://michigan-energy.org).

# Harvesting Efficiency

Energy efficiency offers rich rewards for farmers.

**E**very dairy cow carries an energy price tag. Farmers pump water—and \$2.6 billion in energy dollars—to boost crops. At the end of the day, energy, both direct and indirect, accounts for 13 percent of production expenses on an average farm, so it makes sense that more farmers are turning to energy efficiency to help their bottom lines.

Electricity powers a farm's heating (water, space, heat lamps), pumping (irrigation, water wells, manure lagoons), refrigeration, ventilation, fan (drying grains, aeration) and lighting operations. Material handling—such as feed augers, manure conveyors, milking, and egg conveyors—also drain resources.

The American Council for an Energy Efficient Economy estimates farmers could save \$88 million annually by investing in efficient motors and lighting. So, how can Michigan farmers reap efficiency benefits?

Local electric cooperatives provide rebates for agricultural members (and other business and residential members) who make electricity-saving improvements through the Energy Optimization Program (visit [michigan-energy.org](http://michigan-energy.org) or call 877-296-4319; Cherryland Electric Co-op members, call Member Services at 231-486-9200 or 800-442-8616).

EnSave, a national agricultural energy efficiency firm, also provides a pyramid of steps farmers can take to cut down energy use. The

## Energy Optimization Farm Rebates

- Dairy refrigeration tune-up ..... \$150
  - Low-energy livestock waterer ..... \$50
  - Exhaust or circulation fan  
for barn ..... \$2 per blade inch
  - Variable speed milk vacuum pump.... \$750
  - Variable speed milk pump ..... \$500
  - Scroll compressor replacement..... \$250
  - Milk pre-cooler ..... \$750
  - High bay fluorescent  
replacing HID ..... \$25-\$60/fixture
  - LED light bulbs ..... \$4-\$15
  - Compact fluorescent light bulbs ..... \$1-\$5
  - Outdoor dusk-dawn lights..... \$20-\$50
- Visit [michigan-energy.org](http://michigan-energy.org) or 877-296-4319;  
Cherryland Electric Co-op members call  
231-486-9200 or 800-442-8616.

greatest savings come from deploying more efficient equipment, but behavioral changes and a simple analysis of how energy is consumed can result in significant savings, too.

## Equipped to Save

Each farm—dairy, poultry, beef, hog or crop—offers opportunities for efficiency improvements. For example:

**Clean equipment:** Removing dust, soot and debris will allow equipment to do more work with less effort, therefore extending its life and reducing energy use.

**Inspect equipment regularly:** Replace parts that show excessive wear before they break and cause irreparable damage.

**Plug leaks:** Be it a pinprick hole in a hose or a drafty barn, leaks waste money, fuel and electricity.

**Remove clutter:** Hoses should be flushed regularly to clear debris. Ensure that fan and motor intakes and exhausts remain clear for maximum circulation and efficiency.

## Light Lessons

After tuning up your equipment, check the lights. Light your work areas, not entire buildings, and install dimmable ballasts to control lighting levels. Use daylight whenever possible.

The type of light used also makes a difference. While useful as a heat source in limited situations, such as keeping water pumps from freezing in winter, incandescent lightbulbs only convert 10 percent of the energy used into light. The rest is given off as heat. Consider these energy-saving options, as compared to incandescents:

- Halogen incandescents use 25 percent less energy and last three times longer than traditional incandescent bulbs;
- Compact fluorescent lightbulbs (CFLs) use 75 percent less energy and last up to 10 times longer;
- Light-emitting diodes (LEDs) use 75 to 80 percent less energy and last up to 25 times longer;
- Cold cathode fluorescent lamps (CCFLs) last up to 25 times longer and offer the same efficiency as CFLs.
- T-8 and T-5 fluorescent lights with

electronic ballasts operate more coolly, produce more light per watt, generate less noise (without flickering), and offer better color rendering and energy savings.

## Harsh Surroundings

Before buying new equipment or lighting, make sure your gear can survive the farm's rough environment—fluctuating temperatures, wet locations, long operating hours, and large loads. Confirm the manufacturer's specifications that the unit is intended for the environment, and review the warranty and conditions. Make sure the way you plan to use it will not void the warranty.

Look for knowledgeable suppliers and installers familiar with the local climate and your needs. Typically, farms need more rugged devices than what's available at a low cost from a retail or big-box store.

## Seeds of Change

▲ For regional or crop-specific efficiency methods, use the USDA Natural Resources Conservation Service energy calculators at [energytools.sc.egov.usda.gov](http://energytools.sc.egov.usda.gov). Assess how much energy your farm needs for animal housing, irrigation and tillage, and discover ways to cut costs. Dairy farmers may also visit [usdairy.com/saveenergy](http://usdairy.com/saveenergy).

▲ Funding for efficiency upgrades is available through the Rural Energy for America Program (REAP). Since 2008, REAP has funded over 6,800 renewable and energy efficiency grants and loan guarantees as well as 600 farm energy audits. Get details at [rurdev.usda.gov/Energy](http://rurdev.usda.gov/Energy)>Rural Energy for America Program.

▲ Farmers can also apply for financial and technical/energy management help from the Environmental Quality Incentives Program ([nracs.usda.gov/Programs/FinancialAssistance/EnvironmentalQualityIncentivesProgram](http://nracs.usda.gov/Programs/FinancialAssistance/EnvironmentalQualityIncentivesProgram)).

# LEDs Advance Farm Lighting

One of the biggest developments in lighting our homes, businesses and streets involves the use of light emitting-diodes (LED). These lightbulbs convert electricity directly into bright, white light far more efficiently than other lighting options.

Farms pose unique challenges for lighting—excessive dirt, dust, heat, humidity and ammonia emissions impact bulb performance that conventional light sources have been unable to successfully address.

However, LEDs may offer a robust, environmentally sustainable, and potentially longer-lasting solution. Even better, since LED light can be manipulated, it may be able to improve production.

Hundreds of LED fixtures being tested at roughly 50 farms across rural America—several of which are led by electric co-ops—save on energy and maintenance costs. With a rated life of 35,000 to 50,000 hours, LEDs can last up to 25 times longer than traditional incandescent bulbs, four to eight times longer than linear fluorescent and compact fluorescent bulbs, and over twice the time of high-intensity discharge bulbs.

While LEDs are more expensive than traditional lighting, the U.S. Department of Energy reports a price drop of 54 percent over the last two years. LEDs offer farmers several attractive attributes, including:

- ▶ Rugged, vibration-resistant construction
- ▶ Directional lighting for less wasted light
- ▶ Customizable colors
- ▶ Dimmable capabilities and integration with lighting controls
- ▶ No mercury or waste disposal costs
- ▶ Water- and ammonia-resistant bulbs can be cleaned without damage.

While assessment continues, many claims about LED farm performance are not yet backed by statistically sound science, but preliminary results imply promising and significant energy savings and hint at production boosts.

Farmers can remain cautiously optimistic that research and LED companies will be able to create lighting that is cost-effective and long-lasting.

— Brian Sloboda & Martha Carney, CRN

# Recycling With Rhonda

This DEQ unit chief walks-the-walk while promoting “Recycle, Michigan.”

**R**ecycling is on Rhonda Oyer’s mind every day, both at home and work. “I don’t even remember when I first became involved in recycling,” says the current chief of the Michigan Department of Environmental Quality’s Sustainable Materials Management Unit (SMMU). “It may have been as a ‘junior litter picker-upper’ while camping with my family, or through a school field trip in the 5th grade when we visited the county landfill.” In any case, Oyer has worked for the DEQ for 22 years, starting as an enforcement specialist for solid waste and scrap tires. “When I got my degree in biology, no one could have predicted I would spend my career ‘talking trash!’” she adds, laughing.

“But seriously, most people give very little thought to what they throw away,” she explains. Recycling doesn’t have to be complicated, and you don’t need a fancy area to sort or store your recyclables. “You just have to want to do it and take a little time to find out what can be recycled in your area. It is the right and responsible thing to do in our society to manage our planet’s shrinking resources,” she says. At home, Rhonda recycles through the Charlotte Area Recycling Authority.

She has lived most of her life in rural areas that are served by electric co-ops, first

in Antrim County (Cherryland Electric Cooperative) and now in Eaton County as a member of Tri-County Electric Co-op, and notes that many rural areas have recycling opportunities that require residents to bring their materials to a drop-off location. Currently, only 24 of Michigan’s 83 counties have convenient access to recycling, through either drop-off or curbside collection, for all residents in single family homes.

Generally, Rhonda drops her own recycling off once every few months, and sorts the items in her garage, in...yep... recycled containers. “I have a big cardboard box that a shelving unit came in to stash the containers I use to sort things in, so they are easy to take back.” The containers include kitty litter buckets, a few old laundry baskets, and a fruit box for sorting cans, glass, plastic, boxboard, newspapers, magazines, junk mail and occasionally, batteries and lightbulbs. She usually puts out less than a half-bag at the curb for trash pick up. “So, if I forget to take out the trash one week, it isn’t a big deal,” she laughs.

A shift has occurred over the last few years in how trash is viewed, she continues, and it’s called sustainable materials management (SMM). Rhonda’s DEQ unit uses the SMM approach to redirect trash in the most pro-

ductive and sustainable way throughout its life cycles, from extraction through recycling or final disposal. This minimizes the amount of materials involved and all the associated environmental impacts, while accounting for economic efficiency and social considerations. “This aligns with the efforts of both the United States Environmental Protection Agency to address waste issues in the SMM framework and with Michigan’s 2007 Solid Waste Policy, which recognizes solid waste as a resource that should be managed to pro-

**“Electronic waste (e-waste) is the fastest growing source of waste, and includes computers, TVs and cell phones.”**

mote economic vitality, ecological integrity, and improved quality of life in a way that fosters sustainability,” she says.

Her unit is also responsible for programs that involve solid waste planning, residential recycling and composting, beneficial reuse of industrial materials, dredging, and electronic waste and scrap tire management. “We incorporate SMM concepts into our work so that the job creation, resource conservation, greenhouse gas reduction, and energy-saving benefits of viewing waste as a resource can be realized in Michigan,” she explains. They also try to lead by example, as the DEQ offices

have a good recycling program in place and the building is being redesigned to have a recycling area on each floor.

A couple of particular waste streams are also being focused on. “Electronic waste (e-waste) is the fastest growing source of waste, and includes computers, TVs and cell phones.” E-waste contains toxic materials that pose hazards to human health and the environment if not properly disposed or recycled. “E-waste also contains valuable materials,” she emphasizes, “and that’s why the Environmental Protection Agency (EPA) encourages reusing and recycling over land-filling and incineration.”

Organic waste is another area where there’s a lot of opportunity to shift waste to sustainable uses. Yard clippings are currently banned from landfill disposal, and the DEQ has a program for registering yard waste composting sites. Food waste and the EPA’s Food Recovery Challenge (source reduction, feeding people and animals, industrial uses [rendering/fuel conversion/digestion], composting, landfill) are also seeing increased interest. The DEQ’s food waste efforts are focused on assessing what is currently being done here and connecting interested parties.

State leaders have also recognized the benefits of recycling, Rhonda adds. Gov. Rick Snyder has specifically mentioned forming a 2014 plan for getting Michigan up-to-speed on it and DEQ Director Dan Wyant is working with stakeholders to identify the best plan for getting all residents to recycle.

With this new focus, Oyer adds, it’s clear the state needs to measure existing recycling efforts in order to identify areas for improvement and create a way to measure progress. Estimates show there is less than a 16 percent residential recycling rate. “Industrial recycling seems to be done at a much higher rate, but again there is no consistent measurement and what data we do have is submitted voluntarily,” she reports. The DEQ is working to establish a measurement system, and identify which residents and businesses have access to recycling opportunities.

Referring to the Michigan Recycling Coalition’s awareness campaign, “We want everyone in Michigan to be a part of ‘Recycle, MI’—a place where reducing, reusing and recycling is easy and convenient,” Rhonda says. “It is really exciting to see our leaders recognize the importance of recycling to our economic recovery and rebuilding efforts. I’m looking forward to what the future holds for recycling in Michigan.”

Rhonda Oyer recycles at the Charlotte Area Recycling Authority (above). Communities that don’t have recycling available can get “how to” information from the Michigan Recycling Coalition (see box below).

## From Garage Sales to Recycling, Reduce Your Waste

**W**ith promises to unclutter our homes and provide great deals for seekers of good used stuff, garage sale signs have popped up all over our neighborhoods. There are treasures to be found here, and thanks to the do-it-yourself, thrift-shopping movement, many of them are no longer destined for the trash can.

Giving old things new life by reusing, reselling, remaking or recycling is a terrific way to reduce waste, and an important part of a sustainable future, says Kerrin O’Brien, executive director of the Michigan Recycling Coalition. So, before you unload that old dresser, think about repainting or repurposing it as another type of storage. Further, old cardboard is a good weed barrier under mulch, and a quick internet search offers many new ideas for repurposing almost anything.

### Tips for hosting a good garage sale:

- If your neighborhood has a sale day, take advantage of the free advertising and increased traffic.

- If you go it alone, signs are very important. Give people enough notice to stop ahead of your driveway.

- Price everything to sell, and be willing to deal.

- Put out enough stuff that people will be drawn to look at everything.

- Include your kids—they can sell lemonade, cookies and their old toys.

- Be friendly, talk about your stuff. Sell items over \$100 on Craigslist or eBay,

and advertise your sale on Craigslist with enticing pictures.

Recycle whatever is left that can’t be sold, donated or given away. New materials are added to recycling programs all the time, so call your local government or waste hauler (or visit [Earth911.com](http://Earth911.com)) to find out what’s recyclable in your area. Metal items can be recycled at scrap yards.

If recycling isn’t offered yet in your community, call your local government and suggest they join the “Recycle, MI” program.

### More On Recycling

- In 2012, over 800,000 tons of industrial by-products were recycled in Michigan, reducing greenhouse gas emissions equivalent to removing over 72,000 cars from the road and saving energy equivalent to about 26,000 households’ annual energy needs.

- While Michigan has no landfill ban on electronic waste disposal, individual recycling of this waste went from 1.26 lbs. in 2010 to 2.6 lbs. in 2012. This rate is average for states without a landfill ban.

**Above:** Shopping at the Marquette Food Co-op. **Below:** Planting in a hoophouse extends the growing season.

## Telling a Story of Food

**A**s an avid gardener, “localvore” (one who likes to shop locally), and member of Cloverland Electric Cooperative, I’m interested in the goings-on at the Marquette Food Co-op (MFC). It’s a retail outlet for organic food, some of which is grown nearby.

It’s also the epitome of the “cooperative” model. It’s an organization that, like Cloverland and Michigan’s 11 other electric co-ops, is owned by its members. In MFC’s case, members pay a one-time fee of \$150, which makes them eligible for discounts and in-store specials.

But selling wholesome food is only part of what the Marquette Food Co-op is about. They also have an exemplary community outreach program that educates people about healthy eating, lifestyles and local agriculture. Through cooking classes, food demos, workshops, farm tours and displays at community events, they connected with about 11,600 people in 2012 alone.

They also have their own “hoophouse,” in partnership with Northern Michigan University, where they teach people to garden and experiment with different growing techniques. (A hoophouse is an easy-to-build greenhouse that allows food plants to be grown in the off-season.)

However, the MFC’s grocery store is their focal point. It grossed \$5 million last year and is moving from their quaint-but-cramped quarters to a much larger store on busy Washington Street.

“There is a national interest in safe food and knowing where it comes from,” says Natasha Lantz, community liaison for MFC. This has

been spurred partly by Michael Pollen, author of “Botany of Desire,” and other authors who shed light on problems associated with eating food tainted by chemicals. America’s appetite for fast food has also resulted in higher rates of childhood obesity and type 2 diabetes. Fortunately, more people are becoming aware and seeking venues for wholesome, locally-produced food.

The MFC started in 1971 as a loose-knit group of people making runs to Ann Arbor to get organic food in bulk. Over the years, it morphed into a typical health food store, but struggled and nearly went bankrupt in the mid-90s. By 2000, with management changes and rigorous financial controls, they were talking about expanding their store. In recent years they really tapped into locally-produced products, including fruit, vegetables, meat, honey and maple syrup.

One of their crowning achievements is the U.P. Farm Directory. It lists producers offering everything from eggs to eggplant, and has made these businesses and products much more available to consumers. Many of these farmers now sell their products at the MFC store.

“Many growers came to us,” says Abbey Palmer, MFC special projects coordinator and hoophouse supervisor. Growers were also attracted through the outreach program. One of them is Dan Rabine and his wife Mary Kramer-Rabine in Eben Junction, southeast of Munising. The couple grows vegetables in season-extending hoophouses.

“They [MFC] make it possible for smaller growers,” Rabine explains. “They’ll take smaller quantities and they’re very flexible

with delivery schedules.”

Taking the co-op model to the next stage, MFC’s Lantz and Michelle Walk of MSU Extension are helping to form the U.P. Food Exchange. It’s an agricultural hub being created with funds MFC received from a Regional Food Systems Grant from the Michigan Department of Agriculture and Rural Development last fall.

The Exchange coordinates movement between the U.P.’s three food hubs (eastern, central and western). The project aims to establish both online and physical sites for farm products, improve local food storage capacity, and educate consumers, farmers and institutional buyers about the Exchange’s resources and benefits.

The Marquette Food Co-op is really telling a story about where food is coming from, how it’s grown, and by whom, Lantz says. But they’re also writing a story by letting their greater community know what healthy eating is all about and how people can “cooperate” in growing wholesome food to feed their families.

*Neil Moran gardens in the U.P. and writes about it at [northcountrygardening.blogspot.com](http://northcountrygardening.blogspot.com).*

## Sault Schools Save Big on Energy Efficiency

**D**oes energy efficiency add up for schools? Let's do the math. Not only are students and staff more comfortable and focused, but energy efficiency also helps funds go further. For these reasons and more, the Sault Ste. Marie Area Public Schools recently completed multiple large-scale lighting projects as part of their ongoing energy-saving efforts.

"Although we had been doing a great deal to reduce our energy footprint, this not only gave us an opportunity for energy savings, but the support we very much needed," said Larry Perron, on behalf of the Schools' maintenance team.

With the Board of Education's approval and the superintendent's support, the team completed 10 energy efficiency projects at four schools through the Energy Optimization (EO) Commercial and Industrial program offered by Cloverland Electric Cooperative. Cloverland is one of 12 electricity providers working together to offer rebate programs to Michigan home, farm, and business owners.

### Project Details

While there are many EO rebates for businesses, energy efficient lighting projects are the most popular because they tend to have rapid paybacks—annual energy savings often offset equipment and installation costs in

less than three years. In addition, the lighting industry is no longer manufacturing T12 fluorescent lightbulbs (as of July 2012), which makes finding replacement bulbs challenging.

These factors, along with EO rebates, motivated the Sault Schools to replace lights in four of its oldest buildings. "We are always looking at ways to improve, such as being green schools, staying up with energy savings, recycling, and water bottle refilling stations to name a few," said Perron. "This was a great opportunity to bring energy reductions to the forefront."

Another part of the program that appealed to the Schools' maintenance team was

working together with their utility and the EO staff to achieve great results.

"The thing we were impressed with the most is the great people from Cloverland and the energy firm used to supervise the rebate program and assist with new projects," Perron said. "They have been great to work with—very good at helping us work through the rebate program and great sounding boards for new energy savings within our schools." Two elementary schools, one middle school, and one high school in Sault Ste. Marie are on pace to collectively save almost \$12,000 in

### Co-op Member Spotlight

**Company:** Sault Ste. Marie Area Public Schools

#### Energy-Saving Actions:

- ▲ Installed 520 high performance T8 fluorescent light fixtures in two schools.
- ▲ Replaced 2,008 standard fluorescent bulbs with reduced-watt fluorescent bulbs in three schools.
- ▲ Converted most incandescent light bulbs to CFLs, LEDs, or low-wattage induction lights.
- ▲ Replaced outdated lightbulbs at once instead of waiting for old bulbs to burn out.

**Rebate Amount:** ▲ \$5,809 and counting

#### Results:

- ▲ Lowered electricity use by 102,000 kilowatt-hours per year.
- ▲ Saving \$11,600 in energy costs per year
- ▲ Expecting to double energy savings in 2014

Energy savings and rebates  
for anyone and everyone.  
877-296-4319  
[michigan-energy.org](http://michigan-energy.org)

lighting costs each year with just the upgrades that have been made so far. The EO rebates help offset initial purchase costs, too.

### Future Plans

The Sault Schools' maintenance team also has big energy-saving plans for the future, such as changing 90 high-bay lights to ultra-efficient light emitting diodes (LEDs), upgrading an additional 375 light fixtures from T12 bulbs to T8s, and replacing the gym lights at both the high school and middle school for an even bigger payback.

## COLLEGE BOUND

# What To Know As They Go

Photo - Hope College

**C**ongratulations! Your son or daughter graduated from high school! Now, the freshman year of college is on your doorstep, and it's a huge transition for you both. Here's a few tips to help avoid some of the "freshmen woes."

## Talk To Your Student

"From my perspective, freshman woes connect with where the student is developmentally in terms of identity, independence, intellectual, intimacy and involvement," says Ellen Thomas, student life director at Hope College in Holland, MI. "Freshmen are thrown into a new situation where they have to establish themselves as individuals within a new community." They are excited to get away from home and begin their new life, but it isn't without some reservations and questions. As a parent, talk with your son/daughter about their beliefs and values and how they will fit in with their new-found freedom.

Money is another important issue. Help them develop a budget and discuss expectations with regards to academic performance. You may get a roll-of-the-eyes, but touchy subjects like sex, alcohol and drugs warrant discussion too, says Susan Liebau, director of the Wahtera Center for Student Success at Michigan Technological University. "From a student development standpoint, it is important for students to discover and grow on their own." However, it is still important for them to know they have support from home if they need it.

## Gaining Independence

Even though you've been preparing your child for the last 18 years for this day, it may still be difficult to let go. You won't be there

to make sure they are eating right or getting enough sleep. Will they wake up on time for class? "Instill a sense of trust in your child and empower them to tap into resources on campus," Thomas advises. Handling mundane tasks like laundry, managing money, when to study and what to eat are just some of the daily tasks that will help build and give them a greater sense of confidence and independence. Make sure they know how to do tasks such as laundry and balancing a checkbook. If your child struggles in an area, let him or her know it's okay to ask for help and encourage them to ask someone in their new community.

## Frantic Calls Home

Whether it's homesickness or frustration with a roommate, you're likely to be on the receiving end of some rants. Don't take it personally. "Sometimes a student just needs to vent," Thomas says, and calling home feels safe. "First, listen and show some empathy, then ask what steps they have taken to resolve the issue," Thomas suggests. If you are familiar with the college's resources, encourage them to talk to their resident assistant, academic advisor or counseling center. Let them take the reins to solving their own problem. Tell them you have confidence in their ability to resolve the issue. However, if you have grave concern for their health or safety, then make a call to the college.

## Academic Pressure

Most students realize college will involve

more study time, but some think the professors will remind them when an assignment is due or be lenient about due dates. Some kids who never struggled academically may fail an exam or assignment. "The freedom is overwhelming for some students who have had very rigid schedules previously," Liebau says. "It sounds silly, but sometimes they have so much time they can't seem to get anything done. Finding ways to learn from a variety of people will only support long-term success." Supplemental instruction or tutoring services are available at most colleges.

## Don't Skip Orientation

Orientation activities aren't just entertaining—they are helpful in acclimating to college life and accessing the resources available. For example, Hope College offers an orientation program for parents, students and siblings. Michigan Tech offers a week-long orientation program. Encourage your student to take full advantage of orientation activities. (An orientation tip to parents: Even in this day of texting and emails, students still love a good care package from home.)

You may not hear from your student as much as you would like, but take comfort in knowing that you have prepped them for this time in their life.

# Pier

## Opportunities!

Robert Gwizdz | **OUTDOORS**

Photo — Bob Gwizdz

**T**here's obviously a lot of fishing to be done off Michigan's shores, and a billion-dollar industry has grown up serving those that do—from boat dealers to charter boat services. But there are plenty of fishing opportunities for those who are bound to the shoreline, too. We're talking about piers.

Piers that allow anglers to enjoy the Great Lakes can be found at the mouth of many of our state's rivers, and there's a good shot at scoring a fresh catch during most months of the year.

Pier fishing in Michigan hits its peak as summer wanes, and Chinook salmon begin moving upriver on their annual spawning runs. By mid-August, there are outstanding opportunities off the northern piers, and by September it's going on statewide. From then until it's too cold to fish, the only thing that changes is the species of fish.

There are as many ways to fish the piers as there are anglers who do it. Some cast spoons or sinking lures from the pier's end. Others rig up a big sinker to hold bait on a hook—everything from live alewives to salmon eggs to insect larva—and fish near the bottom. Others prefer chunks of skein spawn and a bobber. All three techniques “produce.”

In recent years, I've been fishing the pier at Manistee with some buddies in late summer and early fall. Our best technique is using live alewives, caught with a cast net or on tiny jigs, for bait. We rig-up with a large pyramid sinker and cast into the river, keeping the

bait near the bottom. When the fish takes it, drop your rod tip, reel up the slack, slam the hook home, and hold on!

As the season progresses, other trout and salmon species join the procession. Chinooks are joined by Coho salmon, brown trout and steelhead over the course of fall and the steelhead, which are spring spawners, filter upstream throughout the winter and into spring. Techniques change as the species change—steelhead seem much more willing to take salmon eggs or insect larva than the baitfish—but anything you offer is likely to produce at any time.

By October, other Great Lakes denizens show up, especially whitefish. That's what gets guys like Doug Smith, a veteran angler from the Kalamazoo area, fired up.

“From the first of October until ice-up, you can get your limit of whitefish most days,” says Smith, who fishes from the pier at St. Joseph. “Right at deer season seems to be the best time and that's when there are fewer guys out there.”

“I like to use a single salmon egg that I've boiled so it stays on the hook well, but some guys use wax worms or wigglers. I use a pyramid sinker and about a 3-foot leader and just let it sit on the bottom. And if you miss a fish, just leave it there—those whitefish will circle around and come back and get it.”

While Smith is busy with whitefish, anglers elsewhere are looking at other species. The pier at Muskegon, for instance, is noted for producing excellent walleye fishing, often at

night, usually around Thanksgiving.

After winter, it doesn't take a lot of spring weather for the action to resume. Fishing for Coho salmon and brown trout—which are near shore then—and steelhead commences as soon as the weather is nice enough to tolerate it. And there are often a few whitefish or their cousins, Menominee, hanging around. As spring progresses, steelhead filter back into the lake from the rivers and from then on, there's plenty of fishing for resident species—smallmouth bass, catfish, burbot, freshwater drum, and more—until, next thing you know, it's late summer and the salmon show up again.

There are piers on all four of Michigan's Great Lakes, from Erie to Superior, and all attract their share of anglers. Some, such as the piers at Ludington or Oscoda, attract regular crowds while others—such as many on Lake Superior—remain undiscovered by many. Pier fishing may not be as adventurous as taking to the big lake in a large boat with a handful of friends, but it can be just as exciting—and generally much less expensive—to enjoy Pure Michigan fishing on Great Lakes waters.

# No-Cook Meals

These no-cook meals are quick and easy—no oven or grill required. Save time and energy in the kitchen, with these light and refreshing dishes.

Veggie Hummus Wraps

## Veggie Hummus Wraps

- 1 medium whole wheat tortilla
- 2 T. garlic hummus
- 2 T. sunflower seeds
- 1/2 carrot, peeled and sliced thin
- 1/2 c. spinach leaves
- 2 T. sliced pepperazzi peppers (sweet and spicy), or roasted red peppers
- 1/4 of large cucumber, sliced thin
- 2 T. feta cheese
- 2 T. Newman's Own® olive oil & vinegar dressing

Lay out tortilla and spread with hummus and sunflower seeds. Layer with spinach leaves, carrots, red pepper, cucumber and feta cheese. Roll up and secure with toothpicks. Dip wrap in olive oil and vinegar dressing. This is a quick, healthy meal that can be substituted with many different vegetables. Makes 1 wrap.

Christin McKamey, [veggiechick.com](http://veggiechick.com)

## Apple Orchard Pita Pockets

### Filling:

- 2 c. deli-roasted chicken breast, diced
- 2 Gala apples, cored, diced
- 1/2 c. honey roasted peanuts or beer nuts, finely chopped

- 1/4 c. jarred real bacon bits
- 2 c. mixed salad greens, torn
- 4 ozs. Provolone or Swiss cheese, shredded
- 4 whole wheat pita bread rounds, cut in half

### Dressing:

- 1/2 c. mayonnaise
- 2 T. apple cider or apple juice
- 1 1/2 t. honey
- 1 t. apple cider vinegar
- 1/2 t. vegetable oil
- small pinch ground cinnamon
- small pinch ground cloves
- salt and pepper to taste

To make the dressing, in a small bowl, combine first seven ingredients; whisk until well blended. Season to taste with salt and pepper. Cover and refrigerate 2 hours to chill and blend flavors. In a medium bowl, combine chicken, apples, peanuts and bacon bits.

Stir dressing and pour over chicken mixture; toss to coat. Open pita breads to form pockets. Line each with salad greens. Spoon filling into pockets and top with cheese. Serve red and green grapes or cut-up fresh vegetables on the side.

Marilyn Partington Frame, *Traverse City*

## 'It's a Meal' Salad

**Dressing:** (prepare a day in advance & chill)

- 1/2 c. extra virgin olive oil
- 4 garlic cloves, minced
- 2 t. dried oregano
- 2 T. white wine vinegar
- salt and pepper

### Salad:

- garlic cloves
- 4 c. iceberg lettuce, broken into bits
- 1 ripe tomato, cut into small wedges
- 1/2 c. julienned ham, turkey or shrimp
- 1/2 c. swiss cheese, julienned
- 1/2 c. fresh grated Italian cheese (parmesan, romano, or asiago)
- 2 T. Worcestershire sauce
- juice of one lemon

Rub wooden bowl with garlic cloves, then add lettuce, tomato, ham, and cheeses. Drizzle worcestershire sauce and juice from lemon. Toss salad. Add dressing, toss again and serve with bread or rolls.

Lois Phelps, *Stanwood*

Photography by: 831 Creative

Visit recipe editor Christin McKamey's new website, [veggiechick.com](http://veggiechick.com), for healthy, vegetarian recipes and info!

## Christin's Guacamole

3 medium avocados (make sure they are ripe and high quality)

1/4 c. white onion, chopped

2 roma tomatoes, diced

2 T. fresh cilantro, chopped

2 garlic cloves, minced

1/2–1 t. salt

1/2 t. cumin

juice from half a lime

juice from half a small lemon

Cut avocados in half. Remove seed. Scoop out avocado from the peel, put in a mixing bowl. Using a fork or masher, mash the avocados (not too much, it should be a little chunky). Add the chopped onion and tomatoes (if not eating right away, put the tomatoes in right before serving). Add cilantro, lime juice, lemon juice, garlic, salt, cumin and mix with a large spoon.

Refrigerate until ready to serve. Makes about 2 cups. Serve with blue tortilla chips.

*Notes:* ▷ Much of this should be done to taste because of the variability in fresh ingredients. Start with this recipe and adjust to your taste.

▷ To keep the guacamole from turning brown, store in a plastic food container—but before you put the lid on, place some good plastic wrap or wax paper and press down over the surface of the mixture. And be sure to get all of the air out when putting the lid on. This works like a charm!

Christin McKamey, [veggiechick.com](http://veggiechick.com)

## Kidney Bean Salad

2 c. or 2 cans kidney beans, drained

1/4 c. celery, diced

3 pickles, dill or sweet, chopped

1 small onion

2 hard-cooked eggs, sliced

1/2 t. salt

1/8 t. pepper

1/2 c. mayo or salad dressing

Mix together the beans, celery, pickles and onion. Add eggs, salt, pepper, and mix lightly with mayo or salad dressing. Chill. Serve on salad greens and garnish with grated cheese.

Joan Coyne, Charlevoix

## Taco Salad

2 heads romaine lettuce, chopped

1 15-oz. can mexican style chili beans, undrained

2 medium tomatoes, chopped

1 small can black olives, drained and sliced

2 cups shredded cheese

1/2 bag yellow corn chips, crushed

2/3 c. mild salsa or to taste

1 c. Thousand Island dressing, or to taste

Christin's  
Guacamole

Combine chopped lettuce, chili beans, tomatoes, olives and cheese into a large bowl. Top with crushed corn chips, salsa and dressing. Toss well to coat all ingredients and serve.

Lorraine Green, South Boardman

## Ham in a Pita Pocket

10 pita pockets

3 c. diced ham

1 can garbanzo beans, drained and rinsed

1 c. cashew halves

1/8–1/4 c. sesame seeds

1 c. sour cream

1/2 c. mayonnaise

1 T. tarragon vinegar

salt and pepper to taste

1 c. cheddar cheese, diced

In a large bowl, combine ham with remaining ingredients. Mix well. Chill before serving. Serve in pita pockets.

Paula Brousseau, Bellaire

## Fruited Chicken Salad Wraps

1 pre-cooked rotisserie chicken

1 c. mayonnaise

1 small jar maraschino cherries

1 small onion, chopped fine

1/2 c. red grapes, halved

1 large red apple, chopped fine

1/2 c. crushed pineapple

1/2 c. shredded cheddar cheese (may use chunk cheese cut into very small cubes)

1/4 c. chopped walnuts

tortilla wraps

Remove bones from rotisserie chicken and tear into bite-size pieces. Place in a large bowl.

In a medium bowl, combine the mayonnaise and all of the juice from the maraschino cherries (do not use the cherries). Into the bowl of chicken, add onion, grapes, apple, pineapple, and walnuts. Pour the reserved mayonnaise/cherry juice over all and mix well. Allow to chill.

When chicken salad is chilled and right before serving, add the shredded cheese. Wrap the mixture into tortilla wraps and enjoy. Excellent served with cottage cheese and potato chips.

Deborah Buck, Cassopolis

# Smart Solutions

Receive a free online energy audit for your home.

**Y**ou can do everything online these days—check bank statements, watch TV shows, and catch up with old classmates on Facebook. It turns out that you can also map your home's energy use at the tip of your fingers.

Use Cloverland Electric's Home Energy Optimizer, a free online home energy assessment tool, to learn about your energy use and how to save more energy and money. You'll be asked important questions about your home—everything from square footage to your typical thermostat settings. Enter as much or as little information as you like. The more detail you provide, the more customized your results will be. Either way, you'll be saving energy in no time. Completing the online interactive survey takes just 15-30 minutes.

Click "Calculate" and the Energy Optimizer will automatically estimate your energy use and projected heating, cooling, hot water,

appliance, and lighting costs. It also calculates your energy savings cost potential in each category to help you see where you can get the highest payback for efficiency improvements. The "Upgrade" tab provides a list of "Recommended Upgrades" with simple ways to lower your energy use.

## Benefits

- ▲ FREE and useful
- ▲ Convenient—ability to save and edit responses or finish later
- ▲ Customized for your city and climate
- ▲ Do-it-yourself, affordable, energy-saving actions
- ▲ Completion entitles you to a free energy saving kit

You have nothing to lose by giving the Energy Optimizer tool a try. After all, it's *free*, and

it will help you understand where you're spending the most on energy. You'll walk away with free products and solid ideas on how to improve your home, enhance your comfort, and fight off mold and drafts.

## Next Steps

Here's how to get started today:

- ▲ Click on "Home Audit" at [michigan-energy.org/Cloverland](http://michigan-energy.org/Cloverland)
- ▲ Write down your session number.
- ▲ Answer questions as best you can. (It's okay to skip questions if you have to.)
- ▲ Finish the audit to receive your *free* energy-saving kit. Each kit is a \$25 value and includes 5 CFLs, 2 faucet water savers and 1 new shower head.
- ▲ Install all kit items. Keep other Energy Optimization programs and rebates in mind for future purchases.

# So Simple, So Smart.

## Test your home...online

Computer on? Clicker finger ready? Find out where your home is wasting energy at [michigan-energy.org/cloverlandhomeaudit](http://michigan-energy.org/cloverlandhomeaudit). In as little as 15 minutes, your free Energy Optimizer online energy assessment gives you personalized, do-it-yourself tips to fix your home's energy problems.

**ENERGY TIP: Complete an online energy audit and receive a FREE energy-saving kit.**

ONLINE: [michigan-energy.org](http://michigan-energy.org) PHONE: 877.296.4319

Energy Optimization programs and incentives are applicable to Michigan service locations only. Other restrictions may apply. For a complete list of participating utilities, visit [michigan-energy.org](http://michigan-energy.org).

# STATE OF MICHIGAN

## BEFORE THE MICHIGAN PUBLIC SERVICE COMMISSION

### NOTICE OF HEARING FOR THE CUSTOMERS OF CLOVERLAND ELECTRIC COOPERATIVE, MIDWEST ENERGY COOPERATIVE, and THUMB ELECTRIC COOPERATIVE CASE NUMBERS: U-17364, U-17365, and U-17366

- Cloverland Electric Cooperative, Midwest Energy Cooperative and Thumb Electric Cooperative (the Cooperatives) request Michigan Public Service Commission (Commission) approval to implement their Energy Optimization Plans in compliance with Public Act 295 of 2008 and the December 4, 2008, Commission Order in Case No. U-15800 and March 15, 2013, Commission Order in Cases Numbers U-17364, U-17365 and U-17366.
- The information below describes how a person may participate in this case.
- You may call or write the Cooperatives' attorney, Mr. Shaun M. Johnson, at Dykema Gossett PLLC, Capitol View, 201 Townsend Street, Suite 900, Lansing, MI 48933, 517-374-9100 for a free copy of the application. Any person may review the application at Dykema's offices or at the respective offices of the Cooperatives, Cloverland Electric Cooperative, 2916 W. M-28, P.O. Box 97, Dafter, MI 49724; Midwest Energy Cooperative, 901 E. State St., P.O. Box 127, Cassopolis, MI 49031; and Thumb Electric Cooperative, 2231 Main St., P.O. Box 157, Ubly, MI 48475-0157.
- The first public hearing in this matter will be held:

<b>DATE/TIME:</b>	October 2, 2013, at 9:00 a.m. This hearing will be a prehearing conference to set future hearing dates and decide other procedural matters.
<b>BEFORE:</b>	Administrative Law Judge Mark E. Cummins
<b>LOCATION:</b>	Constitution Hall, 525 West Allegan, Lansing, Michigan
<b>PARTICIPATION:</b>	Any interested person may attend and participate. The hearing site is accessible, including handicapped parking. Persons needing any accommodation to participate should contact the Commission's Executive Secretary at (517) 241-6160 in advance to request mobility, visual, hearing or other assistance.

The Michigan Public Service Commission (Commission) will hold a public hearing to consider the Cooperatives' July 30, 2013 joint application for approval of Commission-approved Energy Optimization Plans, in accordance with Public Act 295 of 2008, and the December 4, 2008, Commission Order in Case Number U-15800 and the March 15, 2013, Commission Order in Cases Numbers U-17364, U-17365 and U-17366 for Cloverland Electric, Midwest Energy, and Thumb Electric, respectively.

All documents filed in this case shall be submitted electronically through the Commission's E-Dockets website at: [michigan.gov/mpscedockets](http://michigan.gov/mpscedockets). Requirements and instructions for filing can be found in the User Manual on the E-Dockets help page. Documents may also be submitted, in Word or PDF format, as an attachment to an email sent to: [mpscedockets@michigan.gov](mailto:mpscedockets@michigan.gov). If you require assistance prior to e-filing, contact Commission staff at (517) 241-6180 or by email at: [mpscedockets@michigan.gov](mailto:mpscedockets@michigan.gov).

Any person wishing to intervene and become a party to the case shall electronically file a petition to intervene with this Commission by September 25, 2013. (Interested persons may elect to file using the traditional paper format.) The proof of service shall indicate service upon the Cooperatives' attorney, Shaun M. Johnson, at Dykema Gossett PLLC, Capitol View, 201 Townsend Street, Suite 900, Lansing, Michigan 48933.

Any person wishing to appear at the hearing to make a statement of position without becoming a party to the case may participate by filing an appearance. To file an appearance, the individual must attend the hearing and advise the presiding administrative law judge of his or her wish to make a statement of position. All information submitted to the Commission in this matter becomes public information: available on the Michigan Public Service Commission's website, and subject to disclosure. Please do not include information you wish to remain private.

Requests for adjournment must be made pursuant to the Commission's Rules of Practice and Procedure R 460.17315 and R 460.17335. Requests for further information on adjournment should be directed to (517) 241-6060.

A copy of the Cooperatives' request may be reviewed on the Commission's website at: [michigan.gov/mpscedockets](http://michigan.gov/mpscedockets), and at the office of Dykema Gossett PLLC or at the respective Cooperatives' offices. For more information on how to participate in a case, you may contact the Commission at the above address or by telephone at (517) 241-6180.

Jurisdiction is pursuant to 1909 PA 106, as amended, MCL 460.551 et seq.; 1919 PA 419, as amended, MCL 460.54 et seq.; 1939 PA 3, as amended, MCL 460.1 et seq.; 1982 PA 304, as amended; MCL 460.6j et seq.; 1969 PA 306, as amended, MCL 24.201 et seq.; 2008 PA 295, MCL 460.1001 et seq., and the Commission's Rules of Practice and Procedure, as amended, 1999 AC, R 460.17101 et seq.

August 27, 2013

# Co-op Lighting Lessons

Brighter efficiency standards and savings on lightbulbs will appear in 2014.

**A**s federal efficiency standards phase out traditional incandescent lightbulbs, electric co-ops are testing which lighting technologies work best for consumers. Co-ops have long championed compact fluorescent lamps (CFLs), the first cost-effective, energy-saving alternative to traditional bulbs.

“Michigan electric co-ops have given free CFLs and rebates on purchasing them through our Energy Optimization program,” says Art Thayer, energy efficiency director for the Michigan Electric Cooperative Association. “It’s a quick, low-cost way our members can start saving on their electric bills.”

By 2014, household lightbulbs using between 40 watts to 100 watts will need to consume at least 28 percent less energy than traditional incandescents. Because incandescents use 90 percent of their energy producing heat, upgrading saves Americans between \$6 billion and \$10 billion in light-

ing costs every year.

More lighting changes will roll out in coming years. The federal Energy Independence and Security Act of 2007 requires that lightbulbs become 70 percent more efficient than classic bulbs by 2020 (LEDs already exceed this goal.)

Lighting accounts for roughly 13 percent of an average household’s electric bill. Hardware store shelves are filled with lightbulb options. So, what works best for co-op members?

Electric co-ops teamed up on lightbulb testing with the Cooperative Research Network (CRN), the research and development arm of the National Rural Electric Cooperative Association, an Arlington, VA-based service arm of the nation’s 900-plus consumer-owned, not-for-profit electric co-ops.

“We found most residential consumers still prefer to use CFLs over more expensive, but more energy efficient, LEDs [light-emitting diodes],” remarks Brian Sloboda, CRN senior program manager specializing in energy efficiency. “The price of LEDs for home use has substantially dropped, so we may begin to see more LEDs as it becomes more economically feasible to buy them.”

A helpful addition to lighting products is the Lighting Facts Label. Much like nutrition labels on the back of food packages, this version shows a bulb’s brightness, appearance, life span, and estimated yearly cost. This label was created by the U.S. Department of Energy (DOE) to help consumers understand the product and buy the most efficient lightbulb.

Consumers’ energy-efficient lighting options include:

**Halogen incandescents:** Use 25 percent less energy; last three times longer than regular incandescent bulbs.

**CFLs:** Use 75 percent less energy; last up to 10 times longer.

**LEDs:** Use between 75 percent and 80 percent less energy; last up to 25 times longer.

Federal lightbulb standards have the poten-

GE’s hybrid halogen lightbulbs combine CFL and halogen technology, creating a product that lasts eight times as long as traditional incandescent lightbulbs. The 60-watt replacement uses only 15 watts, while the 75-watt replacement uses 20 watts.

tial to save consumers billions of dollars each year. For an average American house with about 40 light fixtures, changing just 15 bulbs can save about \$50 a year per household, DOE reports.

A word of warning when purchasing new types of bulbs: You generally get what you pay for.

“Some manufacturers exaggerate claims of energy savings and lifespans, and cheaper models probably won’t last as long as higher-quality bulbs,” Sloboda cautions. “If you look for the ENERGY STAR® label, that means the bulb exceeds minimum efficiency standards as tested by the federal government.”

The best way to benefit from this fast-changing technology is to buy a more energy efficient lightbulb the next time one goes out, Sloboda concludes.

— Amber Bentley

# Landscape for Looks & Efficiency

Wise landscaping can lower utility bills and improve comfort in addition to dressing up your property.

**Q:** *We are landscaping our new house and want a wooded yard for shade and to enhance the energy efficiency of our home. Where should we plant trees, and which are best? What materials are good alternatives to grass for ground cover?*

**A:** Wise landscaping can do more than create an attractive yard. It can lower your utility bills, summer and winter, and improve your family's comfort year-round. Trees, being one of the key components of any residential landscaping design, can have the greatest affect on your utility bills.

For one, the evaporation of moisture from tree leaves actually cools the air temperature around your home, akin to how perspiration cools your skin. With the proper placement and selection of trees, you can use less electricity to heat your home by taking advantage of passive solar heating during winter.

The primary goal of efficient tree landscaping is to shade your home during summer, yet allow the sun to pass through during winter. Additional goals are, depending on your climate, to allow cool evening breezes to flow around your house or provide moisture for evaporative cooling of the air near it.

Before you start, determine your temperature zone by visiting the USDA Agricultural Research Service at [planthardiness.ars.usda.gov/PHZMWeb/#](http://planthardiness.ars.usda.gov/PHZMWeb/#) or checking with a local landscaper. Hardiness zones refer to the minimum winter temperature range. For warm climates in Zone 10, the range is 30 degrees to 40 degrees F. For cold climates in Zone 1, the range is -30 degrees to -40 degrees F. Michigan ranges from Zone 4a to 6b, depending on the area you live in. If you select trees that thrive in a climate more than one or two zones outside your range, they may not do well and require excessive care.

In an average temperate climate, a typical efficient tree landscaping plan has deciduous trees to the south, southeast and southwest. The leaves block the sun during summer, but when the leaves fall, the sun shines through to heat your home. Leave a small gap to the southwest to allow cooler evening breezes to flow through.

Plant dense evergreens along the north, northeast and northwest sides to block cold winter winds. With shorter days and the sun riding lower in the winter sky, not much solar heat comes from these directions.

In hot, humid climates, shading during summer is most important. Taller trees should be planted closer to the home to block the sun, which is higher in the sky. Leaving a gap for breezes is not as important.

There are also alternatives to grass, such as ground cover plants and gravel. Both have advantages and disadvantages for landscaping a house. The benefits of either depend on your climate, house and yard. Even in the same neighborhood, what's good for one house may not be efficient for another.

Low-growing ground cover near your house can help to keep it

A row of hemlocks on the north side of a home block cold winter winds. They do not block the sun because it does not swing that far to the north during winter.

Photos - James Dullea

Boulders and ground cover plants that use little water are shaded by trees in the summer and help warm a home during winter.

cool. The leaves block the sun's heat from absorbing into the ground, and they give off moisture for natural cooling. This cooling effect is most effective in drier climates because there is more evaporation. In hot, humid climates, the additional moisture from plants near the house actually increase the relative humidity level. This is more of a problem if you rely on natural ventilation compared to air-conditioning with the windows closed.

A good location for low ground cover is between an asphalt or cement driveway or walkway and the sunny side of your house. The driveway gets hot and holds the heat, and also re-radiates it up to your house.

Send inquiries to James Dullea, *Michigan Country Lines*, 6906 Royalgreen Dr., Cincinnati, OH 45244 or visit [dullea.com](http://dullea.com).

*James Dullea is a nationally recognized mechanical engineer writing about home energy issues for the National Rural Electric Cooperative Association.*

When the crops are ready to be harvested, farmers have only a window of time—between weather, equipment breakdowns, and life events—to bring the best-quality crop out of the field. This flurry of activity to get as much work done as possible also means extra caution should be taken to watch for safety hazards.

Overhead power lines pose one of the biggest hazards. This is partly because we have to look up to see them, so especially **farm operators and workers are urged to:**

- ▶ Use a spotter when operating large machinery near power lines.
- ▶ Use care when raising augers or the bed of grain trucks around power lines.
- ▶ Keep equipment at least 10 feet from lines—at all times, in all directions.
- ▶ Inspect farm equipment heights to determine clearance.
- ▶ Always remember to lower extensions when moving loads.
- ▶ Never attempt to move a power line out of the way or raise it for clearance.
- ▶ If a power line is sagging or low, call the local utility immediately.

**If contact is made with a power line,** it is almost always safest to stay on the equipment. Warn others to stay away, and call the local utility provider immediately. The only reason to exit is if the equipment is on fire. In this case, jump off the equipment with your feet together and without touching the ground and vehicle at the same time. Then, still keeping your feet together, “bunny hop” away. Also consider these additional tips:

- ▲ Do not use metal poles when breaking up bridged grain inside and around bins.
- ▲ Always hire qualified electricians for any electrical issues.
- ▲ Do not use equipment with frayed cables.
- ▲ Make sure outdoor outlets are equipped with a ground fault circuit interrupter (GFCI).
- ▲ When operating a portable generator, make sure nothing is plugged into it when turning it on, and never operate a generator in a confined area. Generators can produce toxic, deadly gasses, such as carbon monoxide.
- ▲ Always use caution when operating heavy machinery.

Visit **SafeElectricity.org** for more electrical safety tips.

**Fuel Mix Report**

The fuel mix characteristics of Cloverland Electric Cooperative as required by Public Act 141 of 2000 for the 6-month period ended 6/30/13.

# STATE OF MICHIGAN

## BEFORE THE MICHIGAN PUBLIC SERVICE COMMISSION

### NOTICE OF HEARING FOR THE CUSTOMERS OF CLOVERLAND ELECTRIC COOPERATIVE, MIDWEST ENERGY COOPERATIVE, and THUMB ELECTRIC COOPERATIVE CASE NUMBERS: U-17328, U-17329, and U-17330

- Cloverland Electric Cooperative, Midwest Energy Cooperative, and Thumb Electric Cooperative (the Cooperatives) request Michigan Public Service Commission approval to reconcile their respective Renewable Energy Plan (REP) revenues and expenditures for the period ended December 31, 2012.
- The information below describes how a person may participate in this case.
- You may call or write the Cooperatives' attorney, Mr. Shaun M. Johnson, Dykema Gossett PLLC, Capitol View, 201 Townsend Street, Suite 900, Lansing, MI 48933, phone: 517-374-9100 for a free copy of the applications. Any person may review the applications at Dykema's offices or at the respective offices of the Cooperatives.
- The first public hearing in this matter will be held:

**DATE/TIME:** October 10, 2013, at 9:00 a.m. This hearing will be a prehearing conference to set future hearing dates and decide other procedural matters.

**BEFORE:** Administrative Law Judge Mark E. Cummins

**LOCATION:** Constitution Hall, 525 West Allegan, Lansing, Michigan

**PARTICIPATION:** Any interested person may attend and participate. The hearing site is accessible, including handicapped parking. Persons needing any accommodation to participate should contact the Commission's Executive Secretary at (517) 241-6160 in advance to request mobility, visual, hearing or other assistance.

The Michigan Public Service Commission (Commission) will hold a public hearing to consider the Cooperatives' July 31, 2013, and August 30, 2013, respective applications for Commission approval to reconcile their respective REP plans for the period ended December 31, 2012. The Cooperatives represent that their REP filings included no request for a renewable energy surcharge, no surcharge was approved and none was charged to their member-customers in 2012. The Cooperatives further represent that there are neither revenues nor expenditures to reconcile.

All documents filed in this case shall be submitted electronically through the Commission's E-Dockets website at: [michigan.gov/mpscedockets](http://michigan.gov/mpscedockets). Requirements and instructions for filing can be found in the User Manual on the E-Dockets help page. Documents may also be submitted, in Word or PDF format, as an attachment to an email sent to: [mpscedockets@michigan.gov](mailto:mpscedockets@michigan.gov). If you require assistance prior to e-filing, contact Commission staff at (517) 241-6180 or by email at: [mpscedockets@michigan.gov](mailto:mpscedockets@michigan.gov).

Any person wishing to intervene and become a party to the cases shall electronically file a petition to intervene with this Commission by October 3, 2013. (Petitions to intervene may also be filed using the traditional paper format.) The proof of service shall indicate service upon the Cooperatives' attorney, Shaun M. Johnson, at Dykema Gossett PLLC, Capitol View, 201 Townsend Street, Suite 900, Lansing, Michigan 48933.

Any person wishing to appear at the public hearing to make a statement of position without becoming a party to the cases may participate by filing an appearance. To file an appearance, the individual must attend the hearing and advise the presiding administrative law judge of his or her wish to make a statement of position. All information submitted to the Commission in this matter will become public information: available on the Michigan Public Service Commission's website, and subject to disclosure.

Requests for adjournment must be made pursuant to the Commission's Rules of Practice and Procedure R 460.17315 and R 460.17335. Requests for further information on adjournment should be directed to (517) 241-6060. A copy of the Cooperatives' requests may be reviewed on the Commission's website at: [michigan.gov/mpscedockets](http://michigan.gov/mpscedockets), and at the office of Dykema Gossett PLLC, Capitol View, 201 Townsend Street, Suite 900, Lansing, MI; or at the respective Cooperatives' offices. For more information on how to participate in a case, you may contact the Commission at the above address or by telephone at (517) 241-6180.

Jurisdiction is pursuant to 1909 PA 106, as amended, MCL 460.551 et seq.; 1919 PA 419, as amended, MCL 460.54 et seq.; 1939 PA 3, as amended, MCL 460.1 et seq.; 1982 PA 304, as amended, MCL 460.6h et seq.; 1969 PA 306, as amended, MCL 24.201 et seq.; 2008 PA 295, MCL 460.1001 et seq., and the Commission's Rules of Practice and Procedure, as amended, 1999 AC, R 460.17101 et seq.

# OUR ISLANDS

Michigan not only has great lakes, we have great islands. Fox, Grand, Bois Blanc, Drummond, Poverty, Shoe and Snake. North Manitou, South Manitou, Whiskey and Waugoshance. Garlic, Gull, Ripley Rock, Partridge, Wood and Naomikong. Neebish, Two Tree, Goat and Memory. Their names roll off your tongue like pebbles skipped across the water. About 400 are named, and hundreds more aren't.

Our islands don't appear in the open hand we use to show the world where we live. We don't have nearly as many as Alaska or Florida, but we're near the top of the list. And of those islands, two are unique in the world. We owe one island to the persistence of journalist Albert Stoll, a conservation columnist for the *Detroit News* who championed its designation as a national park, which was finally achieved in 1940. We owe the other to a simple idea: no cars allowed.

I finally got to Isle Royale this summer with my son Jon, who left the heat and bustle of Chicago for the cool nights, starry skies, woodland flowers and rocky trails of one of the nation's most pristine parks. Our least-visited national park is as far from Detroit—about 485 miles as the crow flies—as New York and Des Moines. In the middle of Lake Superior, you can't get there by car, which is what protects it from the harm too many visitors would inflict. Life is precarious on Isle Royale. Fragile flowers cling to rock. Ghostly fir trees wear lichen coats of translucent green. (The lichen appearing to either cause the death of the skinny trees or, at least, to have taken advantage of their frailty.)

Nature's delicate balance is most troublesome for the island's wolves now, as scientists consider whether to import wolves from the mainland to refresh the pack. Without new blood for 18 years—the wolves must cross frozen Lake Superior from Minnesota or Canada—the pack has dwindled to eight members, leaving the moose to multiply to 900 or so. The moose population obviously likes this arrangement. (You'd think 900 moose would be enough incentive for the wolves. Or, just put up a billboard on the Canadian shore of Lake Superior: a picture

Can you find the young woman reading a book on the shore of Isle Royale?

of a moose with an arrow pointing to the island. Wolves are smart, right?) We saw neither animal on our hikes, but heard wolves howling and saw moose droppings.

Wilderness areas, like Isle Royale, give us a chance to recharge, connect with our primal beings, and simplify our lives. Not many of us would choose to live for long without the trappings of modern life, but it's nice to have those places where we can. People of all ages take advantage of the Isle. We met homeschool campers, adventurous young adults, families, and retirees on the trail. One encounter, though, left us puzzled: We met an elderly couple from Alabama who had driven from Huntsville to Houghton, then caught the plane to the island so he could see for himself the little copper mining pits dug by natives centuries ago. After a couple of hours, they flew back. We saw those little copper pits, and though interesting, they alone aren't worth the trip.

When you're on the Isle, you're off the grid. There's little or no cell phone service, spotty internet if you happen by the Isle offices at a good time, and no television. It's like living in rural America before co-ops electrified it. The National Security Agency would have a hard time tracking you there.

Not so on Mackinac Island, we discovered during a recent summer: Japanese teenagers chat in their native language and English, wear flip-flops, shorts and t-shirts with English messages, and take pictures of everything. "Let's get this over with," says one teenager in a group photo. A large Finnish family of all ages tries to agree where to go next. A newly married couple from England drives for 15 hours from

Philadelphia to spend the night, because the bride wanted to see the place where the movie "Somewhere in Time" takes place.

You may think Detroit is the international destination in Michigan, but I'd argue that for the summer months that distinction goes to charming Mackinac Island. You can hear every language under the sun there on any given day. Horses and bicycles rule—alongside cell phones. It's hard to pretend you're "somewhere in time" when modern technology keeps bumping into the past on every street and in every restaurant and fudge shop. (I wonder if Kindles now outnumber real paper books in the hands of folks reading on the Island's many porches?)

I hear that you can't stop progress. Though Mackinac Island might be a calmer place without it, progress could ruin Isle Royale. Let's hope that doesn't happen.

(On a positive note, technology can help you keep that Mackinac Island spirit alive all year long. Sign up for Bree's Mackinac Island Blog, [bree1972.wordpress.com](http://bree1972.wordpress.com). It's filled with photos and commentary as the author chronicles Island life. For Isle Royale, watch for the independent movie "Fifty Lakes, One Island" by Chicago filmmaker George Desort, who spent 80 nights on Isle Royale in 2011 traveling alone, by kayak, with his camera. You can see it at the Besse Center Theater in Escanaba on Sept. 12, [baycollege.edu/filmseries](http://baycollege.edu/filmseries).)
